HOME OFFICE OF THE

Metropolitan Life Insurance Company

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE.

This company has more premium paying business in force in the United States than any other company, and for each of the last 15 years has had more New Insurances accepted and issued in America than any other company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

Assets.

United States, City and R. Bonds and Stocks	\$99,630,935.56
Bonds and Mortgages	90,795,319.02
Real Estate	22,444,627.78
Cash	4,775,988.79
Demand Loans on Collateral, Loans to Policyholders	2,192,702.00
Prem. deferred and in course of collection (net)	8,966,362.78
Accrued Int., Rents, etc.	5,300,922.97

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,
takes an advanced step in the interest
of the policyholder by the adoption of
the following liberal features in its new
policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy
year.

Thirty-one days of grace in payment
of all premiums after the first year.

Paid-up insurance or cash surrender
value or extended insurance after two
years' premiums have been paid.

Loans for the full cash surrender
value.

Policy payable in one sum or in instal-
ments for terms of years.

Policy incontestable, and no restric-
tions upon residence, travel and occupa-
tion, after the first policy year, except as
to military or naval service in time of
war.

Right of the insured to change the
beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make
this new policy the very perfection in a
life insurance contract.

The Road of Folly.

Ever since the so-called hotel excise law of the State of New York went into effect it has been a standing temptation and invitation to that instinctively adventurous element of human nature which develops gamblers and ends with criminals. Quick to see a chance, the powers which prey on the criminal elements of the liquor trade have played their game of "both ends against the middle"—the saloon-keeper and the State being the "ends," and the bondsman the "middle." And the bondsman in the middle gets the battering from both sides. Particularly fierce has this fighting been in regard to excise business.

Beginning with the operation of the law, some ten years or more ago, there has been more or less painful growing pain development incident to childhood, such as whooping cough and croup and measles and mumps. And each of the surety companies that have "went in" to win out have retired wiser than before.

"The Chronicle" has consistently pointed out the absurdity of excise business being measured and weighed by underwriting methods. Harsh language has possibly and excusably been employed. Some private and personal antagonisms and animosities have been engendered.

Now comes the verification and the vindication of all and infinitely more by an hundredfold than anything "The Chronicle" has ever said in an article in the New York "American," published by William R. Hearst, of last Sunday.

Make-Up of the Committee of Fourteen.

"The Chronicle" quotes only such parts of the article as fit the subject of suretyship and which it can verify. As an introductory it is probably best

to follow Kipling and quote things "as they are." In this course comes a letter from the Committee of Fourteen, which is made up of representatives as follows, and is a force that must be reckoned with:

The Rev. Dr. John P. Peters, rector of St. Michael's Protestant Episcopal Church, chairman.

Francis Louis Slade, treasurer.
Henry L. Stimson, formerly United States District Attorney.

Mrs. William H. Baldwin, Jr.
Congressman William S. Bennett.
The Rev. Lee W. Beattie, superintendent of Dr. Parkhurst's Church House in Madison avenue.

The Rev. William Adams Brown, of the Union Theological Seminary.
Professor Francis M. Burdick, head of the law department of Columbia University.

Mrs. Frances A. Kellor, member of the State Immigration Commission.
Edward J. McGuire.

Rabbi H. Periera Mendez, of the Central Park West Jewish Temple.
George Haven Putnam, publisher.
Isaac N. Seligman, banker.
Mrs. V. G. Simkhovitch.

The Committee's Fight.

This committee has made a long, and at times, hopeless, fight. In addition to personal and press efforts it has gone after the consciences of the church-member stockholders of high degree. For instance, here is a self-explanatory letter sent to one of the bonding companies a couple of months ago by Dr. Peters:

New York, Oct. 26, 1909.
To the Directors of the Title Guaranty and Surety Company, Scranton, Penn.:

Gentlemen—On August 21, 1909, a letter was addressed to your president asking the co-operation of your company in this committee's effort to suppress the dives of this city. You were asked to join with the other surety companies in refusing to grant the bond necessary for a liquor license to disorderly resorts.

Enclosed are extracts from the re-

plies received from officers of other companies and a statement of the outcome, together with a letter addressed to the same companies.

From your company a non-committal answer was returned. Shortly thereafter it was rumored that your company would underwrite the dives. Thereupon the agent of the Bankers' Surety Company, formally notified our executive secretary that he would not keep his promise, but would enter into competition with your company for the business. Upon request, he promised not to act until the day following that if possible a change of policy by your company might be secured. Your New York agent, Mr. Williams, was seen and the officers of your company in Scranton were appealed to by long distance, without effect. Your company proceeded to underwrite the dives, the Bankers' Surety Company entered into competition with you to secure their custom, thus to a considerable extent neutralizing and nullifying the attempt made to improve conditions and suppressing and fostering the infamous vice this committee is endeavoring to suppress.

It is extremely difficult to believe that such action should have the support of the board of directors. And we have confidence that with an understanding of the facts you will so place yourselves on record that the mistake may never again be repeated by any company.

(It must be understood just here that this communication was supplementary to a full knowledge on the part of the addressee as to the intent and purport of the addressor.)

Replies to This Letter, Significant.

The extracts from the replies to this letter are appended, after which comes the deluge:

From Vice-President Stryker of the American Bonding Company:

"This company has persistently refused to execute bonds for certain well known places in your city, though offered on most advantageous terms.

(Continued on Page 14.)

1106528

A VICTORY FOR HUMANITY AND THE METROPOLITAN.

The Appellate Division, Third Department, has handed down a decision reversing the Superintendent of Insurance and upholding the right of the Metropolitan Life Insurance Company under its charter to purchase land for sanitarium purposes. This is a great victory, not merely for the Metropolitan itself and for all life insurance companies, in that it adjudicates their rights under the statutes, giving them much broader powers in regard to the purchase of real estate than had previously been allowed, but also a great victory for humanity, in that it opens the door for the activities of the companies to whatever extent it may be deemed wise and desirable for them to act, in the matter of contributing directly to the increase in the longevity of the people.

The following is a portion of the text of the decision bearing upon the powers of life insurance companies under the statutes of the State of New York, in the matter of investments and real estate for the purpose of their incorporation:

"The humane and praiseworthy purpose for which the company seeks to purchase and occupy the real estate does not call upon or permit us to do violence to the language of the statute. Our only duty is to gather from its four corners the fair spirit and meaning of the language employed.

"The real estate now sought to be purchased is to be built upon and actually occupied and used by the company itself for the purpose of caring for and treating those of its employees who are afflicted with tuberculosis.

"The application having been denied solely for want of power, we refer to the petition for the facts which indicate that this real estate is requisite for the company's convenient accommodation in the transaction of its business.

New Relations of Employer and Employees.

"The duties of the employer to the employee have been enlarged in recent years, and are not merely that of the purchaser of the employee's time and service for money. The enlightened spirit of the age, based upon the experience of the past, has thrown upon the employer other duties, which involve a proper regard for the comfort, health, safety and well-being of the employee. A corporation may not only pay to its employee the actual wage agreed upon, but may extend to him the same humane and rational treatment which individuals practice under like circumstances. It must do this in order to get competent and effective service. We see corporations pensioning old

and infirm employees, establishing benefits for the sick and disabled, permitting regular vacations with continuing pay, aiding in sickness, and doing many humane and praiseworthy acts which formerly might have been questioned as not fairly within the powers or duties of the corporation. These acts are not to be defended upon the ground of gratuity or charity, but they enter into the relation of the employer and employee, become as it were a part of the inducement for the employee to enter the employment and serve faithfully for the wage agreed upon, and become a part of the terms of employment."

"RELiance REMOVES HANDICAP."

The change of the Reliance Life to a Modified Preliminary Term method of valuation is not without interest to the fraternity. To the best of our knowledge the Reliance is the only company organized in recent years to put up the full first year's reserve on all policies written, the reserve being according to the highest standard, i. e., 3 per cent. The idea had its advantages but in reality was a handicap and the management has very wisely selected a method of valuation which is nearer in conformity with the present plan of transacting business. Theoretically all of the older companies, or a large majority of them, put up the reserve for the first year, but in reality they don't. In other words it has for years been simply a method of bookkeeping. Income from renewed business has enabled companies to continue a method long obsolete in actual practice. The step of the Reliance is not one of retrogression. The company is as strong as ever, and its business was never more successfully conducted. — "Insurance World," December 28, 1909.

This is not the only company which is now abandoning an unwise system of valuation that has proved a serious handicap to its progress and prospects of success. It is, however, perhaps the most significant and valuable of the experiences of this character, because the Reliance started out with a very large paid-in surplus and with better prospects for success, notwithstanding this handicap, than most other companies; and consequently it was possible for actuaries of standing to advise that success might nevertheless be achieved. The total cost in diminution of paid-in surplus and in interest on invested capital, has been fully a round million dollars, much of which would not have been incurred had there been that reasonable guide ever present before the management, as to the amount which could safely and profitably be paid for new business, which the modified preliminary term method or the select and ultimate method always presents.

The American Life Insurance Company of Tampa, Fla., which has done

an excellent business, both in its ordinary and in its industrial departments, and in both cases at very reasonable cost, also abandons on January 1, 1910, after giving it five years trial, a level premium method of valuation. The method which it has been imposing upon itself was even more severe than the usual net level premium method, being the Walter C. Wright scheme, under which a much larger reserve was charged in the earlier years than under the net level premium method. This it abandons by applying the select and ultimate methods to the existing business in the ordinary department and the New York or Massachusetts standard for the industrial business, and writing its policies hereafter, so as to call for modified preliminary term valuation.

ANNOUNCEMENT.

Raymond B. Warren, only son of the late Thomas A. Warren, for more than twenty years connected with the "Insurance World," of Pittsburg, has entered the employment of "The Chronicle" as field representative.

The proposed organization of the Western Casualty Company—capital \$500,000—at Denver, has been definitely abandoned.

VARIOUS RESULTS OF DECISION IN MUTUAL RESERVE RECEIVERSHIP.

In the last issue of "The Chronicle" a brief statement appeared concerning the opinion of Judge Ward, of the United States Circuit Court, upon claims for preference against the assets of the Mutual Reserve Life Insurance Company, in the hands of receivers.

The decision was briefly as follows, viz.: Against certain assets which were held to have been in trust for assessment policyholders, assessment death claimants are given a preference, and for whatever portion of their claims is not thus paid they are also held to have a first claim, together with legal reserve death claimants, against the remaining assets. This will probably see all death claimants paid in full, or very nearly so.

It is held that the legal reserve policyholders are, for the amount of their reserves, in the position of members of the company, and, therefore, not entitled to be considered as on an even basis with general creditors; so that, if this decision is adhered to, the living legal reserve policyholders will not receive anything on account of their claims.

As to Expense Treated as Two Companies.

The thing about it, which is of especial interest to all life insurance men, is that the money, paid in by legal reserve policyholders, is held by the court to have been properly subjected by the master in chancery to the deduction of all payments made on account of such policies in the form of death claims, surrender values, dividends, &c., and of all payments for expenses which could by any possibility be traced to the new business of the company after it was reincorporated and commenced a legal reserve business. This did not stop with charging against the legal reserve funds the commissions, medical examination fees and similar expenses, or even the cost of maintenance of branch offices, but extended, also, according to the final decision of Judge Ward himself, to refusing to divide the remaining expenses after such an apportionment had been carried as far as the master in chancery considered that it could be carried, in proportion to the amount of insurance in force in the two departments.

Two Departments Should Have Been Separate.

Judge Ward also held that the company should have kept these departments entirely separate from the beginning, as to their receipts and expenditures, and also as to the investment of their assets, and that fail-

ure to do this had rendered it impossible to trace the legal reserve premiums into the assets in such manner as to give any right to preference.

Under the decision that legal reserve policyholders are members of the corporation and not outside creditors, which many lawyers consider will certainly be held by all the courts, it will probably not be profitable to litigate further concerning the other matters. The decision, as it stands, will perhaps give all the death claimants a settlement in full, so that the legal reserve death claimants under these circumstances cannot afford to fight longer as to the main issue and the living legal reserve policyholders cannot afford to do so if they are certainly defeated on the other ground.

Reserves Should Be a Trust Fund.

It appears, therefore, that this decision is and must be a serious warning to all who are engaged in managing assessment or fraternal societies which have created new classes of members with adequate premiums and for whom there should be accumulated adequate reserves. Probably the only protection in such societies, when they have not reincorporated as stock companies would be to make the reserves or all the contributions of the new class a trust fund, either explicitly or by implication, as by maintaining a complete separation of the two classes and providing definitely that one should not be liable for the losses in the other. The decision also indicates plainly the perils which attend the purchase of policies, even when sold with adequate premiums and presumably with adequate reserves, when any portion of the society's business remains on a basis of inadequate premiums and inadequate reserves; for it appears that the surplus contributions of the former class may be devoted to the payment of liabilities in the latter class; or if so devoted, may be so applied in event the society is wound up in insolvency proceedings.

"LIFE INSURANCE REFORM IN NEW YORK."

A Timely, Temperate and Impartial Review of the Operation of Companies Under the Armstrong Laws.

William H. Price, Ph. D., Deputy Commissioner of the Wisconsin Bureau of Labor and Industrial Statistics, and a professor in the University of Wisconsin, has contributed to the American Economic Association a review of "Life Insurance Reform in New York," which is printed as the December, 1909, quarterly publication of the association, and may be had upon payment of seventy-five cents on application to the American Economic Association, Cambridge, Mass.

Most of the Evils Corrected.

The conclusions of the author are indicated by the following general statement, with which the preface to the book opens:

It is fortunate that the combined effect of legislation and of internal reforms in New York life insurance companies has been to correct most of the evils which all candid observers agree existed a few years ago, so that the criticisms necessarily directed toward certain companies in the introduction to this monograph are no longer applicable.

The following closing words of the preface indicate also the determination of the author to protect his judgment from being influenced by partisan arguments.

To preserve this point of view, I have resisted every temptation to consult those actively interested in any capacity in insurance matters. For helpful criticisms of my work, however, I am under obligations to Professor F. W. Taussig, of Harvard University, to my colleague in the University of Wisconsin, Professor W. A. Scott, and to my wife.

Conditions in the New York Department.

The introduction to the book opens with a criticism of conditions relative to the New York Insurance Department.

Its insurance department, older than any except that of Massachusetts, had never gained the reputation of being a vigilant critic or a staunch champion of honesty and equity in company management. The office of Insurance Superintendent has been political, often in the worst sense of the word; the traditional attitude of the department toward companies has been a timid one; and an inadequate clerical staff has hitherto encouraged superintendents to content themselves with ascertaining the solvency of companies, rather than to probe into, and expose, errors of judgment or even intentional wrong-doing on the part of those in control of companies. The situation has been particularly unfortunate since the New York department is the official sponsor for a group of companies transacting nearly

one-half of the life underwriting of the country, and including the four largest life companies in the world.

The Work of the Armstrong Committee.

The following is the author's brief estimate of the work of investigation performed by the Armstrong Committee:

The report of the Armstrong Committee contains the evidence of the most thorough investigation of life insurance companies that has ever been undertaken. It showed that the New York City companies had all been guilty of extravagant outlays in the wild rush for new business, though some small companies had a plausible excuse in the strenuous competition that they had been obliged to meet; that the business which had been purchased with such high rates of commission was miserably non-persistent, the lapse rate being very high; that rebating and consequent discrimination, was rampant; that the cost of new business, owing to exorbitant commissions, was far in excess of the provision for expense contained in the initial premium, and that, accordingly, such large sums were being appropriated out of the surplus accumulated by the old policyholders as to leave no hope of their adequate reimbursement through the accession of new and healthy risks; that, in addition to the diminution of dividends resulting from costly and unremunerative expenditure for new business, dividends were still further reduced in all but one or two of the New York City offices in various ways—by unwarrantably high salaries for useful

and useless officers, by the sacrifice of good rates of return on investments for the sake of aiding trust companies and other financial institutions and projects in which the officers and directors of the life insurance companies were interested, and by extraordinarily heavy outlays for dubious legal and political purposes. The questionable financial transactions were concealed by vague and false entries, defective annual reports, perjury, and rare and improper examinations by the State Insurance Department.

Various Sections of the Laws Considered.

The author finds many things to criticize in the law relating to the election of directors in mutual companies, both from the standpoint of its practicability and its cost.

He thinks that Section 36, prohibiting officers and directors "receiving compensation for negotiating loans" is wise, but that it perhaps does not go far enough. The provision that salaries in excess of \$5,000 must come before the directors for authorization of the payment of same, is praised, as also is the provision concerning publicity of legislative and political expenses. The publicity provisions and the provisions for triennial examinations are all found to be desirable, as also the removal of the restrictions upon loans on real estate, which previously could be made only on property within the State of New York, or

Different plans have been inaugurated to influence people to take insurance on their lives. Some thought it possible to influence them by advertising, others planned to induce them to take insurance by the mail order route, but after a number of years experience with the Public, I am convinced that the only possible way to convince the man that he should protect himself and family with life insurance is by the persistency of life insurance agents.

Most men protect their property and business from fire and a large majority of our business men carry casualty insurance of various kinds, but very few or none insure their brains (the most valuable asset they possess). As an evidence of this the increase of insurance in force in the last twenty years in all companies has not kept pace with the increase in population of the United States.

All companies want agents, and it is useless to say to you that the Philadelphia Life would like you to represent them in your section. Write Perry to-day for contract.

within a small radius of New York City. The provisions concerning investments in local public securities is also praised, and no fault is found with the prohibition of participation and underwriting or with the prohibition of investment in stocks and collateral trust bonds.

Like many others, the author is somewhat at a loss to understand why the standard policy law should have been repealed and standard provisions employed instead, especially in view of the attitude of several New York companies, which was that the standard forms were deemed an advantage in the field.

Endorses Select and Ultimate Method.

One of the most interesting portions of the study is that which is devoted to "valuation." The effect of net level premium valuation is carefully and accurately stated, and the fact is fully brought to light that it requires a reserve very considerably higher than will be necessary for complete solvency, unless, of course, the company has based its surrender values upon the legal reserve.

The select and ultimate method is carefully described, and all the information which is at hand concerning the ratio of mortality during the period of selection to ultimate mortality is collected and compared with the result that the author concludes that the basis which is used in the present New York law is very conservative and that the following ratios will be nearer the fact:

50 per cent. of the ultimate the first year.

65 per cent. of the ultimate the second year.

70 per cent. of the ultimate the third year.

75 per cent. of the ultimate the fourth year.

80 per cent. of the ultimate the fifth year.

85 per cent. of the ultimate the sixth year.

90 per cent. of the ultimate the seventh year.

95 per cent. of the ultimate the eighth year.

The following are the closing sentences of this section:

Inasmuch as the select and ultimate method adopted in New York is only a **minimum** standard of solvency, it has not directly affected the important companies, which still voluntarily retain the conventional, stricter standard. Its indirect effect is more important since the minimum standard has been taken as a measure of expenses and of surplus, which will be dealt with below.

Although New York's standard has not been adopted elsewhere, its influence extends beyond the State, since many companies have been prevented from adhering to the low standards in the States of their domicile, fearing that a wide departure from the New York standard would bring them into

disrepute, as well as exclude them from the most populous State.

Limitation of Cost of New Business Approved.

A very full and careful consideration is given to the limitation of expenses. The general conclusions are as follows:

The limitation upon total expenses appears to have been an unnecessary addition to the other limitation, for the average total expenditure of the companies amounted to only 66 per cent. of the legal maximum. As it seems to work a hardship to a very few companies with unusually low loadings, it would be the best solution to confine the limitation to the cost of new business instead of extending it also to the cost of total business, and again,

The limitation upon the cost of new business was necessary, and has not imposed an unreasonable restraint upon underwriting activity. The limitation upon the cost of total business does not appear to be needed, and it works hardship in a few cases.

Doubts Wisdom of Limitation of New Business.

The author is much more doubtful concerning the limitation upon volume of new business as follows:

Three arguments have been offered on behalf of this limitation. It was urged that companies would select their business better, choosing the less

MARYLAND BARS "DATED BACK" SCHEME.

Commissioner Crouse, of Maryland, makes the following welcome New Year's contribution to sound life underwriting:

Messrs. Downes & Miller, Baltimore, Md.
Gentlemen:

I am in receipt of yours of December 30, 1909, stating that a practice is pursued by quite a few life insurance companies doing business in this State in what is known as "dating back" in order that insurance may be secured at the younger age and lower rate than the insured's insurable age at the time the insurance is applied for, and further inquiring what the attitude of this department would be in a case where the application and examination are made subsequent to the date of the change of rate, and the policy is dated back by the company. In replying to the above inquiry I have no hesitation in saying that I would consider such action if done by any company a flagrant violation of section 154 of our laws, known as "anti-discrimination act," which states explicitly that "no life insurance company incorporated under the laws of any other State or country and doing business in this State shall make or permit any distinction or discrimination in favor of individuals of the same class and equal expectation of life, in the amount or payment of premiums or rates charged for policies of life or endowment insurance, or in the dividends or other benefits payable thereon."

MUST EXAMINE BUT CANNOT.

Commissioner Beedle, of Wisconsin, in his annual report, expresses the opinion that several life companies desire to enter the State and must be examined—he says that "recent disclosures * * * urgently demand such examinations"—which he cannot do because there is no provision for paying for the same. Here is a paragraph from the report:

It is known that several life companies are considering coming back into Wisconsin and before any company can be re-admitted, the law requires that it be thoroughly examined by the Insurance Department. Recent disclosures in several eastern companies doing business in this State, urgently demand such examinations. However as the law stands and is interpreted by the Attorney General there is no way in which the expenses of such examination can be met no matter how vital it might be to the interests of policyholders of Wisconsin.

A COMING CELEBRATION.

On Saturday, the 22d inst., the Metropolitan Life Insurance Company gives a banquet in celebration of the completion of its palatial quarters in the block bounded by East Twenty-third street, Madison avenue, Fourth avenue and East Twenty-fourth street.

The architects of the building will

be guests of honor and in addition there are many prominent men who will be guests of the company upon this occasion, as well as a full representation of the company's superintendents and field men.

While such celebration will be altogether inadequate even for the event of the completion of the magnificent building, which was regarded an experiment with doubtful chances for success when it was inaugurated more than fifteen years ago, its inadequacy as a celebration of the much more magnificent structure the company itself, which is a permanent monument to the genius and toil of John R. Hegeman and his associates, is much more pitiable.

IMPROVEMENT IN DIVIDENDS TO POLICYHOLDERS.

Though information concerning the dividends of all the companies reporting to the New York department is not at hand, enough is known to indicate that there will be a general improvement in dividends to policyholders. It is known that this will be the case in the Mutual Life of New York and the Mutual Benefit Life of New Jersey. The increase in the former is said to average about twelve per cent.

The New York Life Insurance Company gives notice that hereafter its dividend will be available on policies whose anniversaries are between January 1 and March 31, upon the anniversary of the policy, instead of upon March 31, as per the arrangement put into effect on January 1, 1907, when the Armstrong laws took effect.

Judge George H. Bruce, of 320 Broadway, attorney for the trustees of the organizers of the proposed Columbia Guarantee Company, is authority that the desired \$1,000,000 capital and surplus has been oversubscribed by \$700,000, and that he company may begin operations earlier than formerly announced, as of April 1.

EXCEPTIONAL OPPORTUNITIES FOR MEN OF ABILITY

ILLINOIS FIRE COMMISSION SORE.

There is reason to believe that the members of the Illinois Fire Insurance Commission have been somewhat stung by the criticism of the commission in having before it at the first Chicago hearing only insurance men or those invited by insurance men. For the hearing which will begin this week they have invited representatives of a number of Chicago business organizations. George H. Holt has been invited to express his views, but the invitation was extended to him as an individual citizen and policyholder, not as president of the Policyholders Union. The commission has stated its intention to dig below the surface this time and to go into the subjects of preferred rates in Cook County, commissions, brokers, business of Lloyds and other interesting questions.

Will Hew to the Line.

Some of these questions contain great possibilities. The commission has it in its power either to dig into them, regardless of who is hurt, or to make a scholarly investigation of academic questions of no vital interest and impress the public with its thoroughness, when in fact it is touching lightly on somebody's pet subject. A man well informed in Chicago insurance history says that rates on preferred business have never been reduced since the later seventies, although there have been reductions on almost, or quite, every other class. Rates on brick dwellings are just about twice as high in Chicago as in New York or Philadelphia and are higher than in other Middle Western cities. Men who have known Chicago for a long time state that this condition is due to the attitude of a few large companies which have a vast amount of this preferred business on their books. Following the Chicago fires of the early seventies, when only a few companies were operating in the city, these companies, which had gained enviable reputations by their payment of their conflagration losses, got a great hold on the residence business, which they have kept ever since. They are said to have frowned down upon any move towards a reduction.

Sugar-Coated Methods.

At the rates at which it is written this business is so profitable that companies can afford to pay agents and brokers high commissions for it. So strong is the demand of the companies for it that agents have to furnish a fair amount of it to sugar-coat their downtown business or they furnish it gladly in order to increase their contingent commissions. The agents

need it or want it so badly that they are ready to pay brokers high commissions for it, and, it is claimed, in some cases to pay commissions to real estate people and other downtown parties, who under the rules of the Chicago board are not entitled to be brokers because they are not engaged exclusively in the insurance business. This has increased the number of those handling insurance, cut into the business that otherwise would have gone to the agents and to the legitimate brokers and, in short, enabled an army to get some pickings out of fire insurance, for which the property owners pay the freight.

Will Go After London Lloyds.

The commission is going to learn something about London Lloyds. Perhaps it will also learn something about other unincorporated bodies which do insurance in Illinois at will because the laws do not permit the Insurance Department to interfere with them. Past efforts to get these unincorporated concerns under supervision have proved fruitless because large business interests in Chicago were afraid their privilege to deal with them would be interfered with in some way. It may be possible for this official body to procure such information as will influence the legislative mind in favor of regulation, supervision and taxation of these concerns such as the stock companies have to submit to.

Wanted: A Bounty on Wildcat Scalps.

It is conceded that the commission will find that the stock companies are not making a reasonable profit out of Chicago business. Some of them need to make considerable yet to be even on their underwriting for the past forty years. With unreasonable commissions taking the profit out on one side and unauthorized concerns competing for their large lines on the other, the stock companies probably are not making more than they should, but the people of Chicago and Cook county are being taxed to support a crowd of hangers-on and the city of Chicago is not getting in taxes what it would if the stock companies were relieved of competition from untaxed bodies.

THE GOVERNOR'S MESSAGE ON INSURANCE.

The message of Governor Hughes this year is noteworthy for its silence upon suggestions for the amendment of the Armstrong laws. The following are the chief references to insurance:

The work of the department shows the importance of frequent examinations and I recommend that adequate provision be made for this purpose. The statute providing for liquidation

of companies under the supervision of the department has operated to great advantage and has made it possible to avoid the wasteful and expensive methods formerly incident to liquidation proceedings. Such force should be supplied as may be necessary to carry its provisions into full effect.

I also advise that the business of Lloyds insurance in this State should be put upon a proper basis, and that such legislation be adopted as will make it impossible for business to be conducted except under conditions which insure adequate protection.

The supervision of co-operative fire insurance companies should also be made more effective by legislation adapted to secure safe and suitable methods.

"LIFE INSURANCE REFORM IN NEW YORK."

(Continued from Page 5.)

expensive and more persistent business, and business of better quality generally, if they were obliged to cut off some branches of their activity. But it is doubtful whether on this ground alone it would have been deemed prudent to thus interfere with the discretion of company officials.

It was argued that the limitation would cure extravagance. This raises the question whether the limitation upon the cost of new business was alone a sufficient remedy, or whether the fever for new business required to be checked by two medicines instead of one. It would appear that, on this score, limitation on new business was unnecessary, provided expenses were duly limited. The latter provision would alone guarantee that growth should be moderate, except under very extraordinary circumstances, justifying unusually rapid growth. If expenses are limited, there is sufficient warrant that there will be no undue extravagance in getting new business. The two limitations remove first the means, and then the temptation. To remove one would have sufficed, and an arbitrary restriction might have been spared, and a just point of attack, on theoretical grounds, avoided.

The third argument for limitation arose from the fear that the great aggregations of funds in a few institutions were dangerous, both to the policyholders and the public. It should be borne in mind, however, that this hostility to concentration of business power is neither new nor confined to life insurance. It is easily as old and as broad as the business corporation problem. It is not courageous to deal with vast and growing accumulations by arbitrarily checking them. In life insurance, just as among other business corporations, governments have done much to artificially stimulate such concentration. It is, of course, wise to remove all such influences. But it is short-sighted policy to seek to encourage rare fidelity to great trusts, and a spirit of fairness in the general business world, by forbidding men or companies from accepting all the business which legitimately comes to them, and which they prove their capacity to handle ably and faithfully.

He also expresses in another place the following opinion:

The limitation upon the amount of new business which companies may write has already proved embarrassing to one company, and may before long embarrass others. It seemed to be required by the state of public opinion in 1906, and for that reason, possibly, was acquiesced in by the companies most interested, but it should soon be repealed or modified.

Also Deems Surplus Limitation Unnecessary.

He is also not especially pleased with the "contingency reserve" section, although in common with most others, he is of the opinion that since the adoption of the amortization method of valuing securities, which method he thoroughly approves, the perils

of the limitation are not so important. The following, however, appears to cover his matured judgment in the matter:

It was unnecessary because other provisions of the reform law effectively dealt with excessive cost of new business, and with unprofitable employment of funds—the two evils which beset the surplus. Having removed all improper motives for accumulation of surplus, the matter might well have been left to the judgment and responsibility of directors. It may be answered that in fixing the scale of limitations due attention was paid to the prevailing practice of the companies, departures being made only for good and sufficient reason. The limitation was still open to the objection that it relieved directors from all further responsibility, transferring it to the Legislature.

Also the following:

The limitation upon the surplus of companies was unnecessary and dangerous. The danger, but not necessarily the inconvenience, has been practically removed by the recent authorization of the amortization plan of valuing bonds.

Change to Annual Dividends Approved.

The change from deferred dividends to annual dividends appears to him to be entirely justified with the possible exception that deferred dividends ought to be permitted in connection with the insurance of impaired lives. The following represents the author's view of the present situation in this regard:

Few now are interested to defend, fewer still care to take the responsibility of defending, deferred dividends on general grounds. The only attempt to urge a relaxation of their absolute prohibition has been confined to the question of sub-standard risks, where it is claimed that the system of deferred dividends is peculiarly desirable. The New York Life Insurance Company, which writes most of the sub-standard business, has been especially vigorous in urging a modification of the dividend law.

Publicity of Scales of Dividends Praised.

The requirement that scales of annual dividends should be made public is made the subject of special praise, as follows:

One publicity feature of the New York reforms is, however, apparently having a remarkably good effect. This is the requirement that annual dividend scales for the different kinds of policies, ages, and dates of issue shall be submitted to the Insurance Department. In several States, in consequence, the annual insurance reports now contain premiums and dividends for ages 25, 35, 45 and 55 on ordinary life, twenty payment life, and twenty year endowment policies at various dates of issue. These figures as published are sufficiently complete to furnish, on careful examination by a prospective policyholder or an agent, an accurate indication as to the relative cheapness at the present time of policies in the different companies. It is perhaps unlikely that many pros-

pective purchasers of insurance will take the pains to make a careful comparison as to the net costs, but rival agents may be trusted to do so, and are in fact doing it. In consequence high dividend paying policies are easy to sell without any increased commission. In fact, with lowered commissions in many instances, the companies with the lowest net costs have broken all their previous records in amount of new business written in 1907 and 1908.

Closes With Quotations From Edward A. Woods.

This study of the insurance laws of New York and their result upon life insurance conditions bears every evidence, both in the nature of the author's own contribution to the literature of the subject and also in the many citations which he gives of careful and painstaking work. The result of the study is apparently to make one an enthusiastic believer in the benefits which have been conferred upon the life insurance business in general and upon those who are engaged in it, very especially the agents, and the closing words of his entire consideration of the subject are the following by Edward A. Woods, general agent of the Equitable Life Assurance Society at Pittsburg:

There never was a time when life insurance men ought to, and could so easily, secure new business as now. The laws of New York State and most other States deserve a fair and honest trial.

The New York legislation is not perfect. It has already been revised and will be revised more, but in my judgment, and after an honest trial of conditions, it is the best legislation passed in the history of life insurance, not even excepting the legislation of Elizur Wright, which at that time was as severely criticised as the Armstrong laws are now.

AT LAST.

The Supreme Court of the State of Illinois has sustained the sentence of six months, which was imposed on Birch F. Thomas and Edward T. Rhodus, for failure to turn over to the receiver the books of the Mercantile Finance Company. Their refusal was based on the ground that they contained evidence that might tend to incriminate and degrade them.

It thus appears that the rats which have gone often to the trap are at last caught and actually must suffer imprisonment. The operations of the Rhodus brothers for nearly twenty years past are by many deemed to indicate that there ought to be a sanitarium established for the safekeeping of financial perverts and degenerates, both for their own good and for the protection of other men. There are not wanting others who would be candidates for treatment in such a sanitarium in company with the Rhodus brothers.

IN NEW ENGLAND

The Exchange.

The New England Insurance Exchange last Saturday adopted the minimum rates on unprotected dwellings other than farm and summer property in Massachusetts, as printed in last week's "Chronicle."

A tribute to the late Colonel W. A. R. Boothby was also adopted, from which the following is extracted:

Serving in his young manhood days as ticket agent and train dispatcher for the Portland & Kennebec Railroad Company, then joining his fortune with his father's in the local insurance business at Waterville, he was well equipped to reach out for the fruit that grew higher up on the tree of success. This came to him when he entered the special agency field for the National of Connecticut in 1887 and joined this body, when he quickly showed his aptness for underwriting, taking front rank with his associates in the higher branches of the business, especially as related to its protective features.

His abilities were recognized by the president of that company resulting in a close personal friendship that lasted throughout life. * * *

Col. Boothby was contemporary with the men who constructed this exchange and had to do with them in shaping its policy on important matters, notably the work of the factory improvement committee, which has been such a factor in establishing cordial relations the exchange and the insuring public and in shaping its policy on important and important class of underwriting.

Of commanding presence, with a smile for all, with ready and generous aid to his younger associates in the study of insurance problems, and withal of large heart that found its delight in private benefactions, he was popular everywhere.

The annual meeting of the exchange takes place Saturday next.

A Candidate's Views on Fire Protection.

James J. Storrow, candidate for the position of Mayor of Boston—an issue which is to be decided next Tuesday—made an address in South Boston Saturday evening, in the course of which he charged his principal opponent, John F. Fitzgerald, with neglect in completing a system of water mains for the fire protection of that section, stated that the neglect had been rectified under a succeeding administration, and unbosomed himself generally in regard to the municipal fire tax, as follows in part:

A great deal of money can probably be saved the citizens of Boston by a careful, systematic and intelligent study of the problem of fire protection.

The biggest department store in Paris, known as the Bon Marche,

which is considered to be the worst fire risk in that city, pays in insurance premiums less than one-fifth what must be paid for a building of the same kind in Boston.

The fire tax upon our citizens is onerous.

To this fire cost must be added the \$1,500,000 needed for the maintenance of the fire department and the loans and increase on the loans required from time to time for buying land and building new engine houses.

I am not an insurance expert, but during my entire life there has been every few years a serious conflagration loss in Boston, and only last year fire destroyed in Boston \$3,610,000 worth of property.

Remember also that the premiums must not only cover the sums which the insurance companies are obliged to pay for losses, but all their running expenses.

I suppose it is probably a moderate estimate to say that the total annual fire tax to the people of Boston is at least \$6,000,000.

Some demagogue may try to persuade you that this does not concern the laboring man, but only falls upon the rich.

Well, everyone ought to know by this time in this campaign that taxes fall upon the homes and tenement houses and stores where the laboring men live or trade, and to get back to them with a deadly and unerring certainty.

The same thing is true of these fire losses. The payments to the big insurance companies for fire risk raise the rent of the home and also increase the cost of the running of the big department stores and other stores of the city, and find their way into the price of provisions, the price of the cotton or woolen dress your wife buys, the shoes your children wear and the food you eat.

I believe that by following the example of Paris, and carrying out a systematic, carefully planned and fully adequate scheme for water supply and fire protection, we can greatly reduce the fire tax now bearing so heavily upon all our people.

One of the things I propose to do if elected Mayor is to take up this annual fire tax of \$6,000,000, and see if by a careful and systematic plan we cannot substantially reduce it.

This candidate seems in the main to have the right view (though garnished with campaign flourishes), namely, that fire rates are conditioned by the fire waste, as so forcibly set forth in a quotation from a letter of the Hartford Fire to its agents, and printed in this column last week.

Standard Fire of Hartford.

Subscribers to the stock of the Standard Fire Insurance Company met at the rooms of the Board of Trade in Hartford last Friday for purposes of organization. By-laws were adopted and the following board of directors were elected unanimously: D. Newton Barney, Edward B. Hatch, G. C. F. Williams, M. L. Hewes, Frank P. Furlong, Charles L. F. Robinson, E. W. Blumington, George A. Gay, Harris Whittemore and W. A. Sanborn. Subscriptions were present-

ed considerably in excess of the \$250,000 capital and \$250,000 surplus set by the organizers as a starter, and a strong sentiment developed in favor of keeping the subscription books open fifteen or twenty days longer, to enable a still wider participation and enlargement of the initial resources of the company.

Reinvestment in United States Bonds Directed.

A press dispatch from New Haven, dated the 9th ult., relates that, in a decision handed down in the case of Charles H. Dresser and others against the Hartford Life Insurance Company to determine the ownership and management of a \$1,000,000 safety fund, Judge Curtis, of the Superior Court, rules that the Security Company, of Hartford, with which the fund is deposited, must withdraw it from the miscellaneous investments in which it now lies and reinvest it in United States bonds. The Security Company is given eighteen months from May 1, 1910, to make the change. By a further ruling the compensation of the company is reduced to 8 per cent. of the gross income on the fund.

Assemble on Beacon Hill.

The Massachusetts Legislature for 1910 convened yesterday, and Governor Draper and the other State officers will be inducted into office today. His Excellency, whose costly "fire proof" mansion was recently gutted by fire, and was insufficiently insured, may find therein a theme for recommendations in his message. The changes in the laws recommended by Insurance Commissioner Hardison in his last annual report, designed to do away with discrimination against home companies, may be expected to receive much attention during the 1910 session.

New England Brevities.

Captain W. B. Sears has terminated his association with the Kollock, Rice & Co. agency, of Boston, and established himself in the Oliver Building, 141 Milk street.

The Atlanta Home has been licensed to do business in Massachusetts.

The New Hampshire Fire has been licensed to transact business in Virginia.

With the advent of 1910 the grand old Hartford Fire enters the one hundredth year of its existence, rounding out a century of success and trustworthiness in its chosen field of endeavor.

Following the resignation of R. C. Bridgman, William E. Hall has taken charge of the Boston business of the Union Mutual Life, with offices at 7 Water street.

AN EPOCH MARKING SESSION.

Washington, Jan. 4 (Special correspondence).—It is doubtful if America has ever seen so notable an epoch making occasion since the signing of the Declaration of Independence, as that which will mark, in both active and latent potentialities, the gathering of uplift forces in this city one week from Monday.

What the Meeting Is.

The central or primary unit of this coming meeting is the National Civic Federation. When it held its annual convention in New York three or four weeks ago it was hoped that President Taft would be able to attend this coming meeting, slated to be held here, but his engagements conflicted and so the Federation promptly and wisely changed its foci to Washington. It's a case of the mountain going to Mahomet.

While the Federation is the hub of the wheel there are others attached to and revolving about it, all bent on the one sole accomplishment of conservation and uplift of national life and character on demonstrably scientific lines. Among these organizations to hold concurrent executive meetings will be:

The National Grange, the American Federation of Labor, the Farmers' National Congress, the National Association of Life Insurance Presidents and the National Association of State Boards of Arbitration, John C. Richberg, of Chicago, chairman of the Committee on Uniform Corporation Laws of the National Association of Uniform State Law Commissioners, has issued a call for his committee to meet and submit its report to the conference.

The American Medical Association has prepared a draft of a model law, it is said, to provide for the immediate registration of all births and deaths, as birth certificates are a necessary part of the enforcement of the child labor law.

The conference will be opened on Monday, January 17, at 10 a. m., by Seth Low, president of the National Civic Federation, who will preside, and the first speaker will be President Taft. He will be followed by Alton B. Parker, chairman of the committee of arrangements, and Governor Willson, of Kentucky, chairman of the Conference of Governors.

The Governor's conference, which is to be held on January 18, 19 and 20, has, through its chairman, appointed Governors Hughes, Fort, Weeks, Harmon and Marshall a committee on programme for that conference and co-operation with the Federation Conference.

The Conference Upon Compensation for Industrial Accidents, called

by the same persons as the conference in Atlantic City last July.

The Life Insurance Presidents.

In addition to President Taft, Governor Hughes of New York will speak informally at the third annual meeting of the Association of Life Insurance Presidents, to be held at the New Willard Hotel, the 19th and 20th.

The formal program has been divided into three sections. The first section will deal with "**The Problems Arising from Dissimilarity of State Laws and Conflict of State Practices.**" Papers on this subject will be delivered by L. G. Fouse, president of the Fidelity Mutual Life Insurance Company of Philadelphia; Judge George H. Noyes, general counsel of the Northwestern Mutual Life Insurance Company of Milwaukee, Wis., and Hon. John A. Hartigan of St. Paul, Minn., president of the National Convention of Insurance Commissioners.

The second section of the program will be devoted to health conservation. Walter Wyman, M. D., surgeon-general of the Federal Public Health and Marine Hospital Service, will speak on the subject, "**Work of the Federal Government in the Matter of Health Conservation, and What May Be Done to Supplement It.**" M. J. Rosenau, M. D., who is professor of the new course in preventive medicine at Harvard Medical College, will speak on "**The Enlistment of a Health Militia.**" E. W. Dwight, M. D., medical director of the New England Mutual Life Insurance Company, will deliver an address on "**Latent Powers of Life Insurance Companies for the Detection and Prevention of Diseases.**"

The third section of the program will deal with the amalgamation of life insurance companies or the re-insurance of one company by another. An outline of the practical questions involved will be given by Hon. Isaac Miller Hamilton, president of the American Life Convention. The other papers on this general subject will include one dealing with the problems involved from the viewpoint of insurance departments, which will be presented by Alfred Hurrell, counsel to the New York Insurance Department.

Incidental to this official statement of the Presidents' Association comes the following special from Chicago, which indicates how widespread the selection of the six hundred delegates to the polyglot convention has been and the wisdom that dictated it.

A Point of Ethics.

Chicago, Tuesday.—(Special).—Announcement was made last week that Isaac Miller Hamilton, president of

the Federal Life of Chicago, would address the Association of Life Insurance Presidents in January on the amalgamation and reinsurance of life companies. It seems that there was a question in the minds of some of the members of the American Life Convention whether Mr. Hamilton should accept the invitation to deliver this address. Mr. Hamilton is president of the American Life Convention. Not all the members of that organization have felt sure of the friendly attitude towards it of the presidents' organization. Those who were suspicious on this point feared that if Mr. Hamilton addressed the meeting in New York and at the same meeting, or even at a subsequent one, action should be taken in some way condemning the younger Western and Southern companies, or running counter to their interests, it would cause embarrassment and possibly compromise in some way the American Life Convention.

Other members took a different view. They held that the Presidents' Association practically represents the Eastern companies, while the American Life Convention represents the Western and Southern institutions. These members felt that it would be better for both organizations to be on working terms with each other, and that the courtesy of the Eastern body in inviting the Western organization's president to address it should be accepted in the spirit in which it was given, with pleasure that it improved the prospects of co-operation.

The Insurance Hearings.

The underwriters in all branches will have an inning. The program committee of the National Civic Federation has sent "The Chronicle" an outline from which is extracted the following:

The time on the program we allotted to the insurance question will be used by official representatives from the National Conference on State Insurance Commissioners, the National Association of Life Insurance Presidents, the American Life Convention, the National Board of Fire Underwriters, and the casualty insurance companies. Over a quarter of a billion of dollars is the average annual fire loss in the United States for the last five years. The National Board of Fire Underwriters is moving for uniform State laws to check this waste of property.

A Few Others to Be Present.

The need for uniform public accounting will be presented by officials from the United States Census Bureau, the National Municipal League, the League of American Municipalities, the American Statistical Association, and the American Association of Public Accountants.

A SUBSTANTIAL START.

It is immediately conceded that the Commercial Casualty Company, of Newark, has started in a way that presages success. From inception to now the company was destined for it. No promoting scheme was involved. The men behind it knew how to deliver goods.

With William J. Gardner as the managing head the company begins its operations fully equipped with the asset of brains that makes assurance doubly sure. His ability as a liability underwriter developed under the Aetna's rigid system, makes certain that the liability end of the proposition will quickly forge to the front. His experience also has been such as to give him a wider view as to the value of competent aides in other departments, and for the surety and fidelity operations he will no doubt improve on some recent selections of other companies. The penny wise and pound foolish policy of saving at the spigot and wasting at the bung will have no recognition under Gardner's administration. He knows how to procure business and men of ability. He also knows how to spend money advantageously. His methods of advertising have been eminently successful. His personal treatment of brokers, agents and competitors has been of a character that inspired respect, an asset of first dimension.

Secretary Gray, the real originator of the proposition to organize a casualty company that would be creditable to the vast insurance interests centred in Newark discussing the "housewarming" of the Commercial's "door-opening" tells "The Chronicle" that they are proud of their accomplishment and says:

We have every reason to believe the company is destined to become one of the great insurance institutions of the country. It has been organized on an absolutely sound and substantial basis; its board of directors is a most representative body of men; it has secured, as its general manager, a young and progressive man, clean cut, honest, capable and aggressive, and it will begin to do business at a time when the whole nation is pulsating with the new prosperity that promises to last for many years to come.

A large volume of business is awaiting the operation of the company in New Jersey; the Greater New York and the Philadelphia agencies are practically organized, and the work in other fields is being pushed as rapidly as possible.

At the outset we shall devote ourselves particularly to personal accident and disability, and all the branches of liability. We shall take up surety and fidelity bonds, burglary, plate glass and boiler insurance in due course.

The policy of the company will be one of progressive conservatism. We shall be up to date, alive to the needs of the hour, ready to take advantage of our opportunities, and shall base

our best hopes for success upon a strict principle of actual service to the public. But we shall prefer to build slowly and safely, rather than to deceive ourselves and our stockholders with big immediate profit, effected by the acceptance of questionable business.

The directors feel that the future of the company is safe in the hands of Mr. Gardner, and that he is just the kind of man to manage this kind of company.

CHICAGO'S SPLENDID SURETY YEAR.

Reports of business done by a considerable number of the surety offices in Chicago show increases over 1908 ranging from a few per cent. up to almost 100 per cent. in a few cases. The National Surety leads with about \$300,000 in premiums done through the Chicago office. The American Surety, Fidelity & Deposit and United States Fidelity & Guaranty have each done over \$150,000. The figures of the Illinois Surety have not been given out, but it may run up to the companies just named. The Bankers Surety and the Title Guaranty & Surety have both passed the \$50,000 mark in business transacted through their Chicago offices. As a number of the offices have enjoyed very low loss ratios their companies have made a good profit in Illinois in 1909.

New Entries In the Field.

During the coming year it is quite likely two or three additional companies will enter Illinois. The Ocean will surely begin writing fidelity business in the State. It is known that the National Fidelity & Casualty intends spreading out somewhat in the near future and already has considered Chicago. The Commerce Trust Company of Kansas City is to decide this month what its future policy will be. Should it conclude to enter more territory, Illinois would naturally be considered, as it recently entered Indiana. There has been correspondence between Chicago parties and certain eastern companies which have not entered Illinois with a view to getting them to do so, but nothing definite has developed from this as yet.

A BOISTEROUS FRIEND.

Kansas is to be congratulated that her freak banking guaranty law has been declared invalid.—"Wall Street Journal."

The "Journal" should not overlook the fact that Kansas takes a Wall street utterance by exact contrariety. Perhaps the "Journal" knew best how to commend the guaranty law to the Kansans.

The guarantee of bank deposits has taken rather strong root in the agrarian States of the West and notwithstanding some pretty hard licks it is likely to continue to bob up serenely, even if slightly disfigured. There is just about enough of practical utility in what has long been regarded by the thinkers as a Utopian scheme of the dreamers to hold its advocates together, and under direction of intelligent study of economic conditions and necessities it is quite probable that some workable plan may be evolved. But all the plans advanced up to this time have been on the same basis as the old farmer's idea that all the Government had to do to make more money was to keep the presses going printing bank notes. There was no conceivable reason in his mind for ever stopping them.

Until a system can be invented that will not be a direct imitation to the ever present irresponsible army of adventurers to embark in banking enterprises there is no hope for continuity. The Oklahoma case is one in point. The first bank failure exhausted the "fund" created by the new law and the State's inability to pay off the depositors in the second failure caused the predicted hurricane that toppled over the house of cards. And what is the value of a law on the books when there is no cash to cover its operation? "Nobody can't do nothin' for nobody without nothin'."

The leading students of political economics are practically agreed that it is no more the function of the State to guarantee one class of creditors than another and depositors in banks are simply creditors. Followed to a logical conclusion the State could, with equal consistency, guarantee the grocer, the butcher, the druggist, the landlord, the individual or the corporation, in fact, everybody, each in their separate sphere, against loss from bad accounts, accidents, burglary, fire, alimony, betting on the wrong horse, etc., etc. Paternalism produces a lot of busy bad children if indulgent. The only way a boy learns to swim is by his own efforts. Destroy incentive, or, as J. D. Rockefeller expressed it recently, "the need to struggle constantly," and interest in life wanes and ambition gets dropsical.

The guarantee of bank deposits is essentially a private function. Of course, banks of deposit are a great convenience and incentive to trade and commerce—hence, are a necessity, but each man selects his bank as he does his house, or his doctor, or his horse, all conveniences and even necessities in a sense, but, speaking generally, not absolutely indispensable.

Each man presumably exercises his judgment in selection; if prudent, he insures against calamities and ever recurring disaster. But for the State to put its own credit to float for every man's benefit would be folly confounded.

Wipe out the patent laws and incentive to invention vanishes. The guarantee law wipes out the loss liability in theory only, but assuming, for the sake of argument, that it did so in fact, the result would be to eliminate the necessity of men doing their own thinking, and weighing and measuring of men and things, in consequence of which a condition of inertia, torpor and lassitude would set in.

The work of guaranteeing bank deposits is of a nature to require the very highest degree of underwriting skill, and this can be efficiently rendered only by that type of individual effort which has created the great business institutions of America.

NO CHANGE ANNOUNCED.

The Aetna announces that for the present there will be no successor appointed to its Greater New York manager, William J. Gardner, who has just resigned to assume management of the newly organized Commercial Casualty, of Newark.

The liability business of the New York office has been the largest department and was under Mr. Gardner's immediate personal direction, and until a high-grade liability underwriter is secured that department will be personally attended by a home office man. The other departments will for the present continue under their respective heads.

City business will continue to be managed directly by Walter A. Hughes, superintendent of the liability department; Charles H. Phelan, superintendent of the personal accident department, and Beverly W. Wrenn, Jr., superintendent of the claim department. This is a strong combination, and the business of the big branch will flow along without an apparent ripple on the policyholders' surface.

It is rumored that the company has its eye on a well known Chicago liability man, but there are so many of them in the Windy City that it is merely a conjecture at present.

TO REGULATE THE UNRULY AUTO.

There is little doubt but that the incoming Legislature will amend the existing motor vehicle laws. There is so much interest in motor vehicles that users, manufacturers and legislators generally recognize the need for more effective motor vehicle legislation.

The great complaint against the operation of the present law is that of reckless driving and the consequent killing and maiming of innocent people upon the highways. The trouble is not that the speed restrictions are not severe enough, or that the penalties for their violation are not heavy enough, but that public officials do not exercise the power which the law gives. If a driver operates "a motor vehicle on the public highway at a rate of speed greater than is reasonable and proper, having regard to the traffic and use of the highway, or so as to endanger the life and limb of any person, or the safety of any property," he is guilty of a misdemeanor and liable to a fine of \$100 for the first offense; for the second offense to a fine of \$100 and thirty days imprisonment; and for the third or subsequent offense to a fine of \$250 and thirty days imprisonment.

Present Law Not Enforceable.

The law goes further and says that even if the speed of the motor vehicle is safe as to the traffic of the highway and does not endanger life or property, still at street intersections, at sharp curves and on bridges, &c., the speed shall not exceed four miles per hour, and in closely built up portions of cities and villages shall not exceed ten miles per hour, and in other portions of cities and villages shall not exceed fifteen miles per hour, while in the open country, it shall not exceed twenty miles per hour; i. e., the law says **first**, that the speed must always be safe, and **second**, that, whether safe or not, it cannot exceed the prescribed limits.

The law, however, does not stop with the foregoing, but says that if any city or village is dissatisfied with the above provisions, by action of its common council or board of trustees and by posting certain specified signs, it may provide for such lesser speed as it shall desire, except that such provisions for lesser speed shall apply to all vehicles and shall not be less than ten miles per hour in incorporated villages.

Is there any dissatisfaction on the part of the public with the speed restrictions of the present law? Clearly not. If dissatisfaction existed it would appear in the cities of the State, where motor vehicle accidents

principally take place; and if it did appear in the cities, it would manifest itself in a disposition to take advantage of the provisions of the law, which authorizes any city of the State to make speed limits whatever it sees fit, provided the restrictions are made to apply to all vehicles and provided the certain specified signs are posted. So far, no city has taken advantage of these provisions of the statute.

Officials, Not the Law, Too Lenient.

If the law is too lenient as regards penalties for violating speed provisions we would expect to find convicted violators of the motor vehicle law receiving sentence for the full penalties prescribed. On the other hand, it is doubtful if a case can be found in the State of New York where the punishment of the convicted offender has been as severe as the law would allow.

If the speed provisions and the penalties for their violations were enforced as they should be, there is nothing further that the public needs for its protection. This will stop speeding and resulting accidents more than any new law that any Legislature can enact.

The average city administration pays very little attention to enforcing the automobile law. They may take a whack at it once or twice a year, and the rest of the time automobilists drive as fast as they like.

THE ROAD OF FOLLY.

(Continued from Page 1.)

The company cannot afford to identify itself with that element, which you and your associates have been working so earnestly and unceasingly to suppress."

From President Lyman of the American Surety Company:

"Long prior to the formation of the Committee of Fourteen this company determined not to issue such bonds, and that course has been continued since. This company is in full sympathy with the objects of your committee."

From President Durbin of the Federal Union:

"This company in its writing believes in decency as much as you or your associates. It will not knowingly write any excise bond on the character of the risk you mention."

From President Seward of the Fidelity and Casualty Company:

"It has been the persistent policy of this company to avoid, as far as possible, risks of the class to which you allude. Our efforts will continue to be steadily in that direction."

From President Warfield of the Fidelity and Deposit Company:

"This company is associated with the surety company in writing excise business, and the purpose of the companies handling this business is not to write bonds for such places."

From President Blount of the Illinois Surety Company:

"This company will co-operate with you in every way in its power by refusing to write bonds for any disreputable institution."

From President Joyce of the National Surety Company:

"This company will not knowingly permit the execution of any excise bond for vicious places, irrespective of the premium or security offered us. I cannot believe a surety company of any standing would for a few paltry dollars sell its services to such an undesirable element."

From President Bland of the U. S. Fidelity and Guaranty Company of Baltimore:

"My company is thoroughly in sympathy with the views of the Committee of Fourteen and will not knowingly write an excise bond for any disorderly place."

From President Tompkins of the U. S. Guarantee Company:

"It has been and will continue to be the policy of this company to avoid the bonding of such places. We are pleased to note that the co-operation will be continued."

From President Penniman of the United Surety Company:

"My company is thoroughly in accord with the movement and aims of the Committee of Fourteen. I shall be glad to co-operate with your committee in bringing about the reforms which are need to place this business on a better foundation, at least, from the lawbreaking standpoint."

From President Hunt of the Aetna Indemnity Company:

"I wish to take this opportunity to personally endorse the attitude of your committee regarding excise bonds."

From President Falvey of the Massachusetts Bonding and Insurance Company:

"This company will not lend its

name or support to the conducting of immoral or unlawful places."

Read and Be Wise.

There is no need to comment on what follows. It is its own glossary. From it you can learn and some may divulge a portion of radium—valuable stuff.

The Cat Is Out of the Bag.

After the several years effort of "The Chronicle" and the Committee of Fourteen combined, there comes a semblance of help from the daily press in the article printed last Sunday in the New York "American," from which the following pathetic extracts are reprinted.

It must be stated in this connection that "The Chronicle" has spent some money in affording all parties at interest an opportunity to enter a statement. To the hour of going to press the only reply received has been from President Harvey, of the Bankers', which refers the inquiry to President Seward, of the Fidelity & Casualty, as though he was head of a public life-saving service.

What The "American" Sees.

The tale the "American" tells is quite confirmatory of all that has preceded. It reflects credit on the journal, the committee and this office. The turning on of the limelight, due to Tammany's defeat politically, has marked what is in fact an epoch in the history of New York, even of America.

The Indictment.

This is the indictment the man from the "American" has entered against the Bankers, and his visit to Cleveland is prolific of talk, surprising, simple, superfluous, the principal parts of which are reprinted so that a fool or a wayfaring man may not err.

This is as the awakening runs:

Another battle against white slavery in New York City will be begun this week by the Committee of Fourteen, which is composed of men and women already well known for their activity in civic and social reform. The committee is to hold a special meeting within the next few days, to de-

cide on legislation for closing unlawful resorts where liquor is sold.

At its conference the committee will also consider a plan to break up a bonding monopoly, which took advantage of the anti-Raines Law Hotel crusade of the Fourteen last year to force the dives to pay an additional tribute of nearly a half million dollars.

The men behind this monopoly are the directors of the Bankers' Surety Company of Cleveland, many of whom are prominent in church circles of the company's home city. Again and again the Rev. Dr. John P. Peters, chairman of the Fourteen, appealed to the directors there to abandon the business of bonding New York dives for extortionate sums, but in vain.

The story of how a group of lawyers and financiers, holding high social and business positions in a distant city, reaped a rich harvest from bonding vice in New York, is now made public for the first time.

Only One Company Bonded Them.

For the purpose of shutting the doors of drinking resorts frequented by certain men and women the Fourteen drew up a blacklist of about 320 hotels, cafes and restaurants. It asked all the surety companies not to bond the blacklisted resorts. At first all the companies, through their New York agents, agreed to the request. Then, suddenly, a few days before October 1, 1908, the beginning of the excise year, the Bankers' Surety broke away and began bonding the dives. Its agent, James McGinty, gave as an excuse that a small Scranton company was after that kind of business.

The Scranton company, soon after Dr. Peters appealed to its officials to refuse to take money from the dive keepers, quit. The Bankers' Surety, however, plunged in all the deeper.

The blacklisted establishments thereupon found that it was either "pay up or shut up." No company except the Cleveland one would bond them for an excise license, and without a license the alternative was to go out of business.

Where the Evil Is Found.

Taking advantage of its monopoly, the Cleveland corporation jumped the price of excise bonds from \$40 to as high as \$1,000. In a multitude of cases keepers of blacklisted resorts were also compelled to put up a cash indemnity of \$1,800 in addition to a \$1,000 premium.

It is at the doors of just such places as the Committee of Fourteen blacklisted that the responsibility for the worst evils of the white slave traffic

GEORGE M. NETTLESHIP,
Manager of Agencies.

have been laid by social workers who have studied the underworld closest.

Inquiry by the "American" in Cleveland discovered that the officials of the Bankers' Surety Company of that city are fully aware of the character of the business solicited and accepted by their New York agents. Moses A. Craig, secretary and treasurer of the company, speaking for the directors, freely admitted this.

The only defense made for accepting what Mr. Craig himself characterized as "dirty money" is that it supplied a practical method of recouping losses sustained through a former New York agent.

Endorsing Is "Good Business."

"We have been writing excise bonds in New York and taking all we could get. We considered it good business, as it afforded an opportunity to retrieve losses incurred during the year 1907, when the agents of the excise law were active in New York. A year or so ago we needed money badly, and this looked like a good way to get it without much risk."

"Do you know the character of the places that your agent is supporting by supplying the bond necessary to procure a liquor license, and without which they could not do business?" interjected the interviewer, who was not prepared for the frankness shown in the preliminary statement of the official.

"We know we are furnishing surety bonds to your so-called Raines law hotels," was the answer.

Knows It Is "Dirty Money."

"And do you know that practically every place to which you have furnished a surety bond it blacklisted as a disorderly house?" persisted the reporter.

"Yes," answered Mr. Craig. "We know that it is 'dirty money,' and we are in bad repute with the Association of Surety Companies for accepting such business, but after we found that our former New York agent, Arthur C. Reister, had been writing bonds for places of the class mentioned and had incurred heavy losses through revocations not reported to the home office there seemed no other course to adopt but to go after every dollar in sight."

Mr. Craig admitted he came to New York on several occasions, and, after thoroughly investigating the conditions under which they were doing business there, told the metropolitan agent, James McGinty, to go ahead and make all he could out of the excise business. As a special inducement to the agent a contract was made by which he was to get, and has received, 33 1-3 per cent. of all the money collected as premiums excise bonds.

Keeping Up Home Appearances.

When Secretary Craig was asked if the Bankers' Surety bonded houses in Cleveland such as those from which he admitted large profits had been obtained in New York, his answer was equally as frank as any made previously during the interview.

"No," he said, "we certainly could not afford to do that sort of business at home."

The men actively connected with the management of the Bankers' Surety Company are all prominent, religiously, financially and socially.

P. W. Harvey, president; George H. Olmstead, first vice-president; William Winsor White, second vice-president; M. A. Craig, secretary and treasurer; directors, Harvey D. Goulder, chairman; Charles Babcock, Charles A. Otis, D. Z. Norton, George H. Olmstead, Frank Semple, Christian Schuele, John Mitchell, C. E. Kennedy, E. H. Zurhorst, Charles R. Mayers, of Columbus; Henry Strand, R. E. Burdick, A. S. Upson, F. M. Osborn, Frank McCord, L. Newshuler, H. J. Wentz and M. P. Goodman.

P. W. Harvey, the president, is a Yale graduate, and in addition to being wealthy is one of the best known young men socially in Northern Ohio.

A Dominating Spirit.

Harvey D. Goulder, chairman of the board of directors, and the dominating spirit in the management of the company, is a lawyer of national repute. He is well known in Washington for the interest he took in the Ship Subsidy bill some years ago. He is general counsel for the Lake Carriers' Association and a director in a dozen other corporations.

Mr. Goulder's home in Cleveland is on Euclid avenue, and he is a prominent and active member of the Euclid Avenue Congregational Church. He is a member of the Union, Euclid, Colonial, Country, Roadside, Rowfant, Cleveland Yacht, Congregational and Gentlemen's Driving Clubs, of Cleveland; Detroit Club, Detroit, and Transportation Club, of Buffalo.

Charles A. Otis, Jr., is a member of the firm of Otis & Hough, bankers and brokers, and publisher of an afternoon newspaper. He is a Yale graduate, a director of the Standard Sewing Machine Company, member of the advisory board of the Citizens' Savings and Trust Company, New York Stock Exchange and Cleveland Stock Exchange.

NATIONAL SURETY EXAMINATION.

Just as "The Chronicle" goes to press the Superintendent's report of its examination is at hand. It is too lengthy to review in the limited time and space afforded, but will be treated in extenso in an early issue.

The report deals with many matters that have been the subject of criticism and gossip for many months and which will no doubt be now set at rest. Generally, the report shows a favorable financial condition.

WILL TEST KANSAS STATE FIRE RATES.

Chicago, Tuesday (Special).—Managers here have been going ahead with their preparations to test the constitutionality of the Kansas rate regulation law, being fairly confident that the Attorney General of Kansas would be unable to prove the companies guilty of violation of the anti-trust law of that State in the trial which was in progress at Topeka for a number of days.

It is the intention of the companies to knock out the rate regulation law if possible. While many managers are favorable to anti-discrimination laws, if properly safeguarded against abuse, the majority have become convinced that the principle in the Kansas law is too dangerous to ignore. If the power of rate regulation were in the hands of experts not subject to political influence, the case would be different; but managers see no probability of rate advances ever being ordered, no matter how greatly they may be needed. They look upon the law as a rate-reduction measure. No insurance superintendent would have reason to expect anything but political death if he were to resist the demands for reductions or to order advances. Should a superintendent court his own destruction by thus defying public opinion, there is nothing to prevent candidates for Governor from making campaign pledges to appoint as superintendent a man who will give the people what they want.

Already three States have enacted State rate regulation measures, and no two of these laws are alike. The managers figure that if fifteen or twenty more States should enact fifteen or twenty more varieties of the same species it would create an intolerable condition. Therefore they feel constrained to endeavor to convince the courts that the Kansas law is unconstitutional, and thus stem the tide before it runs higher.

MILLIONAIRE AGENCIES.

It is fresh in the memory of even the latest neophyte in insurance that the great State of New York determined, in legislative session, that its insurance energies, as individually represented, required a limitation of effort by the real live ones, else the small fry would have no place in the running. This applied to the companies.

Now comes the general agency of E. E. Clapp & Co., domiciled at 66 Pine Street, this city, managers of the Fidelity & Casualty's accident department, with the placid announce-

ment of two million dollars premium income for 1910. Now, why should one single general agency be allowed such reward of energy? Why not compel it to divide with the poor and us? Even a very small part of that two millions would be accepted by a very large portion of the non-working element.

Even Chicago is getting "chesty" on this same question. Conkling, Price & Webb, managers of the Western department of the London Guarantee & Accident, are calmly counting on one million premium income for the agency during the year. With better burglary and plate glass conditions even these figures will be raised. Burglary conditions as to rate and commission wars are practically settled, but the plate glass fight is still in progress. However, the plate glass is a negligible factor in the computation of general results, therefore 1910 may be forecasted with approximate accuracy.

Frederick P. Hopkins, for forty years connected with the State Mutual Life, of Worcester, first as solicitor and later as general agent, died at his home in that city Wednesday of last week, at the age of 73.

The NEW POLICIES of the Provident are unsurpassed for conciseness and simplicity of form and for adaptability and liberality in all essentials.

The Premium rates of the Provident are exceedingly low and are still further reduced by large annual dividends.

Established 1836.

Entered U. S. 1848.

The statement of the condition of the United States Branch on the 1st of January, 1909, in accordance with the laws of the State of New York, is as follows:

ASSETS\$13,212,749.70
LIABILITIES 8,238,870.50

SURPLUS \$4,973,879.20

As an illustration of the Company's practice in maintaining its Assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

THUS SHOWING EXCESS OF EXPENDITURE IN THE TWO YEARS OF\$2,710,650
AND INCREASE OF ASSETS IN THE SAME TIME OF 1,110,929

PROGRESS of the United States Branch: Net Fire Premiums—1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES—The amount paid in satisfaction of fire losses in the United States to the beginning of the present year was \$115,772,000. This large sum, in conjunction with the growth of the Company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Superintendent Hotchkiss' Report.

The first annual report of Superintendent Hotchkiss and the fifty-first annual report of the Insurance Department of New York was submitted on January 12 to the Legislature. The early part of it is given over to a comparison of the work of the department with the work of its first year under the Hon. William Barnes, first Superintendent of Insurance, who assumed office on January 12, 1860, and who is still living at the ripe age of 85.

A comparison is instituted between the assets of companies at the time of the first report and the assets one year ago—the statements of the companies at the close of the year 1909 are, of course, not yet in—showing that the total assets of all the insurance companies doing business in the State of New York on December 31, 1859, were \$105,001,520.65, and at the present time \$3,939,887,174.55.

Pages 12 to 14 are given up to an explanation of the present organization of the department, comprising 85 persons, and to recommendations that proper provision be made for larger headquarters at Albany, for additional space in the offices in New York City, for generally increased expenses and for a restoration of the office of Third Deputy Superintendent and authorization of the employment of an assistant auditor and an assistant actuary, to be stationed in New York City.

Proposed Amendments of Last Year's Enactment.

Discussing the legislation of last year, the Superintendent recommends that section 7, prohibiting gifts to department officers and clerks be amended so as to prohibit the same coming from any officer or other person connected with "the superintendent or any clerk or employe of the Insurance De-

partment, or any examiner, for extra service, or for purposes of legislation, or on any other pretense," and that the amortization section be amended so as to provide that it shall apply only to life companies unless the superintendent shall otherwise determine. He also recommends that the section relating to reinsurance which now provides that the whole of any risk on an individual life may not be reinsured except by permission of the Superintendent of Insurance, be amended so as to apply also to all other kinds of insurance companies, the idea being that no company should be permitted to reinsure all its risks without the consent of the department.

Would This Suit the New York Life?

The superintendent mentions a suggestion that "so long as the gross amount of renewal commissions and collection fees specified in this section (97) be not exceeded, any life company should be permitted to use the same in other forms of compensation, provided that its contract stipulate that such compensation be approved by the Superintendent of Insurance." This appears to look toward some kind of a recognition of the Nylie scheme which the New York Life Insurance Company has so long urged should be permitted.

The Superintendent comments especially upon the extremely low cost of the department's taking charge of a company, pointing out that the entire trusteeship of the Washington Life Insurance Company during the period that the department was in charge, by agreement, between the Washington Life and the Pittsburgh Life was less than \$4,500, and that this also eventuated in a reinsurance contract approved by the company,

the termination of the trusteeship, the surrender of possession and a certificate of authority to the Pittsburgh Life & Trust Company to do business in New York.

Recommends Amendments of Laws.

The Superintendent takes up the discussion of the origin and general nature of the insurance laws of New York and makes certain recommendations, as for instance:

First, that the provision for registered policies should be repealed.

Second, that section 96, limiting the volume of new business, should be extended to all companies doing business in the State of New York, the penalty to be revocation of license in the case of a company which is domiciled in another State or foreign country.

Third, that section 97 be amended, first, so as to make it perfectly clear that it does not apply to a contract with each individual agent; and, second, "so as to provide that companies may only claim credit for mortality gains upon policies in force, and in no case ignore the costs of carrying the policy to its next due date." The first of these has reference to a ruling of the Attorney General, based upon *Boswell vs. Security Mutual Life Insurance Company*, in the Court of Appeals, and the second to a decision of the Appellate Division in *Travelers vs. Kelsey*, which is now before the Court of Appeals.

Fourth, that section 60 be so amended that it will penalize the making of any representation instead of merely any misrepresentation for the purpose of inducing one to lapse, forfeit or surrender his insurance. Query: As to whether this would not be unconstitutional.

The Superintendent also discusses section 70 of the insurance law, and

particularly the words "or the health" in sub-division I, and is of the opinion that while total and permanent disability may well be covered in life insurance policies, all forms of disability perhaps ought not to be. He is, in any event, clearly of the opinion that "the department should have power to require life companies writing any kind of health policies to keep separate accounts and make separate statements on that class of business."

Recommendations Re Industrial Insurance.

Under the head of "Industrial Insurance" he refers to the fact that the Armstrong Committee "suggests that the subject of industrial insurance is one deserving special investigation," and says: "Such suggestion continues to have much merit and with proper additions to the department's force such an investigation may, it is thought, be begun."

He recommends that there be added to article II a section permitting any life insurance corporation doing business in this State to issue life or annuity policies "in amounts not exceeding \$3,000 on a monthly premium basis, with such exemptions from the provisions of the insurance law as now apply to so-called industrial insurance, provided the policies have the advance approval of the department."

Reference is made by the Superintendent to the present standard for the valuation of industrial policies, which is the Standard Industrial Mortality table, based upon the experience of the Metropolitan Life Insurance Company and $3\frac{1}{2}$ per cent., the method being what is known as the "New York plan"; and to the fact that request has been made that the same be modified. The Superintendent says of this:

The department has ruled that, having once exercised this function, it has no power to modify or amend, and that, if any change is to be made, legislative authority must be given. The minimum standard of industrial valuations fixed by the department in 1907 was based upon computations and conferences expressive of the views and experience of the two companies then chiefly doing this class of business. The conclusion reached was thought to establish a basis that was absolutely safe. The department is not now willing to recommend any lower basis, and, therefore, merely suggests that, if the basis then established is thought by the Legislature to be too high the Legislature itself, after a proper investigation of the experience of the companies doing this class of business, fix such basis.

The recommendations of Superintendent Hotchkiss in regard to other forms of insurance are set forth in other pages of this number of "The Chronicle."

A NEW AND VALUABLE MORTALITY TABLE.

Some three or four years ago "The Chronicle" exclusively published a mortality table constructed on the aggregate basis under the supervision of the Scandinavian Actuarial Society, and showing the mortality experience of the companies of Denmark, Norway and Sweden.

This table, however, is not well adapted for the use of companies, owing to the fact that it was in the opinion of most of the companies what is known as a "junior table," that is, it was affected at all the ages at which insurance is taken, but in an unequal degree, by the presence of an over-large number of lives which had been recently selected by medical examination.

Accordingly, J. F. Steffenson, a leading Danish actuary, and one of the members of the government commission which supervises life insurance in Denmark, has constructed by the application of Makeham's law, from the experience of the Scandinavian companies, excluding the first five years of insurance an ultimate table which he calls Dm⁽⁵⁾ meaning Danish male table, with the first five years of insurance excluded. The title selected is somewhat unfortunate, because this expression "D" has already been used in connection with English tables to designate a "diseased life" table. It is otherwise applicable, because, apparently, only the Danish lives have been considered.

The extraordinary thing about the table is the very low mortality which it exhibits at all of the ages under 55, but this can best be illustrated by giving the mortality rates themselves, which are as follows:

Age.	Rate of Mortality.	Age.	Rate of Mortality.
20	0.00274	61	2962
21	280	62	3221
22	287	63	3505

AN ACHIEVEMENT WORTH WHILE.

The annual statement of the Continental Life Insurance Company, of Wilmington, Delaware, published in other columns of this issue of "The Chronicle," is a record of one of the most remarkable achievements in establishing a new company—and all the more remarkable in view of the rage of extravagance in building up new companies which has swept over nearly all the country except New York.

The company shows for the year a gain in insurance in force of \$1,865,730, or 120 per cent., and this, not only without the large loss in surplus which only too commonly attends such growth, but actually with an increase of net surplus of 18 per cent.

The Continental Life made a similar record in 1908; that is, showed earnings for the year though doing a large new business. That was its first full year and this its second.

It is doubtful whether this has ever been paralleled in this country. It might be considered the more extraordinary, in view of the fact that the company has carried the strict modified preliminary term reserve from the outset. But, instead, it is due to that, i. e., to the guidance which that method affords the management as to what it can profitably expend for new business, more than to any other one thing, other than the capable business management of its president and other officers.

The business of the company is annual dividend, and, in addition to its gain in surplus, it paid dividends upon policies which reached their second anniversary, that reduced the net cost below the average in the 25 leading American companies.

The management ascribe their success to the conservative reserve standard, cost of new business limited to actual margins, careful selection of risks, restricted territory and intensive field work and prudent investments.

HEAD OFFICE:
Cor, William and Cedar Streets,

A QUEER DEAL.

Horace White, Lieutenant Governor of New York, better known as the right-hand man of the State Republican machine boss, Timothy L. Woodruff, does not seem to be able to keep out of the insurance limelight. In the recent action of the Superintendent of Insurance to block the scheme to get possession of the \$3,000,000 of assets of the People's Mutual Life Insurance Association and League, of Syracuse, a fraternal society, for which control of the directorate was to be had for the sum of \$100,000, Mr. White admits that he acted as official "bag-holder," and that in that connection he had been recipient of the sum of \$20,000 which, he says, was paid him for an old obligation of John Tevis, who engineered the deal. His explanation of the old obligations is as follows:

This sum had been owing to me, part of it running over a period of several years, for disbursements, moneys advanced, profits and services in various transactions in which I had been interested with Tevis, and not a cent was for services rendered in this transaction.

Was It an Obligation From Provident Savings Days?

The names of John Tevis and Horace White will be recalled in connection with the purchase of the control of the Provident Savings Life Assurance Society by a number of Louisville capitalists about a year and a half ago. Fortunately, the Insurance Department of New York prevented the assets of the Provident Savings from being removed to Louisville. Query: Was the \$20,000 an unpaid commission on the former deal?

It is reported that the object in getting control of the People's Mutual Association was to reinsure the same in the Federal Life Insurance Company, of Canada, which, of course, although the members were not notified of it, was being done for the benefit of the certificate holders.

The transaction in which Lieutenant Governor White played an important part is believed to be a flagrant violation of the laws of New York State. The People's Mutual Life Association is a fraternal society, and the claim of the resigning directors that they held certain contracts which were worth \$100,000 is believed to be a mere evasion. If these contracts were bona fide, the officers of the company could be prosecuted for perjury (the maximum penalty for such an offense is twenty years), on the ground that the company has never reported these contracts as a liability in their sworn statements to the Insurance Department.

Statement of the Superintendent.

A statement of facts has been issued by Superintendent Hotchkiss, and is in part as follows:

In brief, the evidence showed that eight of the nine directors of this society, which is a fraternal beneficiary society having no capital stock, have received thus far the following amounts from one John Tevis, of Louisville, Ky., who seems to have been in effect the purchaser of the society, with assets of about \$3,000,000, and having 40,000 members, viz.: Willard H. Peck (first payment), \$21,500; Iram C. Reed, \$15,000; E. R. Debarr, \$13,500; Dr. E. O. Kinne, \$25,000; J. E. B. Santee (this sum having been sent him in currency by Kinne out of \$30,000 paid the latter), \$5,000; Charles F. Wazte, \$1,000; H. H. Mondon, \$5,000; Slayter Laycock, \$5,000.

Fifty thousand dollars of the \$150,000 placed in Lieutenant Governor White's hands by Mr. Tevis was disbursed by the latter in the following amounts: Willard H. Peck, \$10,000; First National Bank of Syracuse, \$5,000; John Tevis, \$10,000; Horace White, \$20,000; still on deposit in the First National Bank of Syracuse, \$5,000.

Messrs. Peck, Reed and Debarr claim that the money paid them was consideration for their assignment to Mr. Tevis of certain contracts bearing date in 1904, at about the time the society began business, whereby they were to receive, in addition to their salaries, certain percentages on business done. Messrs. Peck and Reed, however, admit that obligations to them on these contracts were never carried as a liability against the company, and therefore face the alternative of admitting that this money was paid to them, as claimed by the department, in consideration of their joining in a scheme for the surrender of the control of this company to Mr. Tevis and his associates, or else responding to the charge of filing false statements in the Insurance Department for the past several years.

As to the disbursement of the \$50,000, it would appear that the \$10,000 paid Mr. Peck was by way of securing his services in connection with a new or reorganized company; that the payment to the First National Bank of Syracuse was in consideration of its accepting on deposit from one Travers, of the Farmers Bank, of Canada, on behalf of Mr. Tevis, Canadian currency to the extent of \$150,000, and also for its good offices and the risks which it might run in practically cashing \$180,000 of the society's securities, that the same might be used in making a deposit of \$150,000 of the society's moneys in the Farmers Bank, of Canada; that the payment of \$10,000 to Mr. Tevis was a return to him of his own money, and that the payment of \$20,000 to Lieutenant Governor White was for moneys owing him over a period of several years, and represented by disbursements, cash advanced, profits and services in several transactions in which he had been interested with Mr. Tevis, and that the \$5,000 still in the bank is claimed by Mr. Tevis, but at the request of the department is being held subject to the determination after an examination as to whether he is entitled to the same.

It will therefore be seen that the statement of the department late in

December, that the controlling officers of these fraternal beneficiary societies had parted with such control to other persons for a substantial money consideration running to such officers, has been substantiated.

It was then stated that the amount paid such officers—and such statements were based upon the facts as they had then been developed—was \$150,000. It now appears that such officers received but \$110,000.

The testimony, which is quite voluminous and contains much that throws side lights on the whole transaction, indicates that the old officers looked upon this society as their property, and without consulting its members were willing to dispose of it to their individual profit. In the opinion of the department, men who would thus sell their trusteeship cannot be trusted to continue in such trusteeship; likewise men who would buy such a trusteeship might sell it. Hence the department's action in seeking to take this company and its large assets out of their hands.

A CREDITABLE INSTITUTION.

The thirtieth annual statement of the Bankers Life Association of Des Moines, Iowa, shows the association has made great gains in the territory in which it operates. The Bankers is by far the most successful assessment association that this country has ever had, both from the standpoint of economy of management and the selection of risks. Great credit for its remarkable growth and stability is due President Clark and his associates.

Previous to becoming president, Mr. Clark had been active in the management of the association for over twenty-one years. Treasurer Simon Casady has served for thirty years, while Secretary H. S. Nolan has lent his efforts for seventeen years.

The association has a membership close to 150,000, and has insurance in force of over \$400,000,000. New business written during the year exceeded \$64,000,000.

The resources of the association January 1, 1909, were \$13,502,474.51. After paying its expenses and \$2,730,000 to the beneficiaries of members who died during the year it saved for future needs a little more than \$1,750,000. At the end of the year its assets were over \$15,000,000, and it has since organization paid to the beneficiaries of deceased members more than \$20,700,000.

BEST'S INSURANCE REPORTS.
BEST'S INSURANCE NEWS.

The Standard Authority.

A NOTEWORTHY SESSION.

It gives "The Chronicle" pleasure to own receipt of a special invitation to attend the third annual meeting of the Association of Life Insurance Presidents, to be held at the New Willard Hotel, in Washington, in connection with the National Civic Federation's "Third House of Congress," which opens its week's session on Monday.

Invitations are also acknowledged from several State insurance commissioners and from the organizations of insurance interests that will attend this most notable meeting.

"The Chronicle" has already outlined in a general way, the program of the different groups, but as all are more or less intimately bound by related purposes and plans, the full program of the life presidents' meeting on Wednesday will serve to focus all the others. For this reason it is given in full as a guide for all the others, excepting, of course, the predominating National Civic Federation and the "House of Governors" respective plans.

The Life Presidents' Program.

Wednesday—Morning Session: 10:30 o'clock.

"Words of Welcome"—Hon. Thos. E. Drake, Superintendent of Insurance for the District of Columbia.

"Movement for Uniformity of State Laws."

Addresses by:

L. G. Fouse, president, Fidelity Mutual Life Insurance Company, Philadelphia.

George H. Noyes, Esq., general counsel, Northwestern Mutual Life Insurance Company, Milwaukee.

Hon. John A. Hartigan, Insurance Commissioner of Minnesota and president of the National Convention of Insurance Commissioners.

Afternoon Session: 2:30 o'clock.

Discussion of morning topic continued.

Address by

Hon. Charles E. Hughes, Governor of the State of New York.

Thursday—Morning Session: 10:30 o'clock.

"Movement to Prolong Human Life."

Report of life extension committee of the Association of Life Insurance Presidents.

George E. Ide, chairman, president of Home Life Insurance Company, of New York.

"Work of the Federal Government in the Matter of Health Conservation and what may be done to supplement it."

Walter Wyman, M.D., surgeon general of the Public Health and Marine Hospital Service of the United States.

"The Organization of a Public Health Militia in the Cause of Preventive Medicine."

"MAKING ONEIDA FAMOUS."

Oneida "Democratic Union."

Birch F. Rhodus, of the firm of Rhodus Brothers, the best-known expert life insurance men of this country, who are completing the organization of the Consolidated Life Securities Company, has been president of the company, and to succeed this gentleman as president is an honor of which Mr. Remich can be very proud; and the bringing here of the home office of such a large enterprise ought to be pleasing news to all Oneidans.

But the last addition to making Oneida famous, and what will make this city become more generally known and talked about, and hence **still more famous**, is the coming here of the home office of a big life insurance company—the Consolidated Life Securities Company, of Chicago, Ill. The company has a capital of \$2,500,000, one-half preferred stock and the other half common stock.

Mr. Remich has received several telegrams congratulating him upon his election to the presidency, assuring him of support, and expressing confidence in his ability to do the work.

Birch F. Rhodus, the retiring president, is expected here shortly after the first of the year, and the force of clerks will also come here, as will the deposits come to our banks.

M. J. Rosenau, M.D., department of preventive medicine and hygiene, Harvard Medical College, Boston, Mass.

"Latent Powers of Life Insurance Companies for the Detection and Prevention of Diseases."

E. W. Dwight, M.D., medical director of the New England Mutual Life Insurance Company, Boston, Mass.

Thursday—Afternoon Session: 2:30 o'clock.

Informal remarks

Hon. William H. Taft, President of the United States.

"Amalgamation of Life Insurance Companies."

Addresses by

Hon. Isaac Miller Hamilton, of Chicago, Ill., president of American Life Convention.

Alfred Hurrell, Esq., of Albany, N. Y., counsel to Insurance Department of the State of New York.

Insurance Commissioner Blake of Missouri announces that it is his intention to have an examination made of every insurance company operating in that State, within a year.

"The Chronicle," January 6.

The Supreme Court of the State of Illinois has sustained the sentence of six months which was imposed on Birch F., Thomas and Edward T. Rhodus for failure to turn over to the receiver the books of the Mercantile Finance Company. Their refusal was based on the ground that they contained evidence that might tend to incriminate and degrade them.

Undesirable Fame.

It thus appears that the rats which have gone often to the trap are at last caught and actually must suffer imprisonment. The operations of the Rhodus brothers for nearly twenty years past are by many deemed to indicate that there ought to be a sanitarium established for the safe keeping of financial perverts and degenerates, both for their own good and for the protection of other men.

There Are Others.

There are not wanting others who would be candidates for treatment in such a sanitarium in company with the Rhodus brothers.

Perhaps.

Provided his time is not otherwise engaged, and provided there are any deposits.

The Pacific Mutual Life Insurance Company not only increased the amount of new business written in 1909, over the business written in 1908 by \$2,600,000, but it has also added to its assets a sum of almost equal amount. President Cochran states that the accident department of the company has had the best and the largest year in its history.

CONSERVING PUBLIC HEALTH.

By Lewis E. Palmer.

While professor of economics at Yale, Dr. J. Pease Norton made an address that resulted in something more than its reprint in a tiresome convention volume. Dr. Norton was speaking on the advisability of a National Health Department and stated that while the Department of Agriculture spends \$7,000,000 a year on plant health and animal health, Congress does not appropriate directly, with the exception of the work done by Drs. Wiley, Atwater and Benedict, a single cent for promoting the well-being of babies.

Thousands have been expended in stamping out cholera among swine. Not one dollar was ever devoted for eradicating pneumonia among human beings. Hundreds of thousands are consumed in saving the lives of elm trees from the attacks of beetles—in warning farmers against the blights affecting potato plants and in importing Sicilian bugs to fertilize fig blossoms in California.

Dr. Pease stated that a million and a half persons must die in the United States during the next twelve months—that equivalent to 4,200,000 persons will be constantly sick and that 5,000,000 homes, consisting of 25,000,000 persons, will be made more or less wretched by death and sickness.

The Government Should Take a Hand.

In a great measure as a result of this speech, a committee on national health was organized. It really originated in the medical profession some twenty years ago, but its recent reported success has been largely due to the reinforcement received from laymen. The tuberculosis crusade has now become largely a lay movement, and to its success is doubtless due in part the growth and strength of the work of a national health bureau, and this growth and strength is no where more forcibly indicated than in President Taft's last message, where he calls attention to the fact that "for a considerable period a movement has been gathering strength, especially among the members of the medical profession, in favor of a concentration of the instruments of the National Government which have to do with the promotion of public health."

It has expended nearly \$50,000 in a campaign of education, and has distributed 42 different publications. The total number of pieces of mail matter sent out is nearly a million. Newspaper clippings in the office of the committee in New Haven nearly fill two enormous scrap books of 500 pages each. An equally important

branch of publicity is that through the magazines; several of which give regular space to questions of health; and as a New York paper recently had it, one of the chief joys of the circulation manager's heart lies in the subscription possibilities of articles on tuberculosis, hook-worm, pellagra, cancer and other grim maladies.

Accomplishments of the Committee.

It was largely through the work of the Committee of One Hundred that President Roosevelt added public health to his conservation program and invited the president of the committee to become a member of the conservation commission, and to write a report on this aspect of conservation. His commission on country life also included public health questions in its report. It was undoubtedly partly as a consequence of this last report that Mr. Rockefeller was spurred to make his famous gift of \$1,000,000 to eliminate the hook-worm disease on the Southern farms.

Recently the committee proposed to the Association of Life Insurance Presidents that it was just as essential to their interests to decrease death rates and lengthen life, as it was for fire insurance or boiler explosion insurance people to prevent fires and explosions. It was shown that over 40 per cent. of the deaths which now occur could be postponed, at an enormous saving to life insurance companies. The life insurance presidents, as a result of the suggestion, have appointed a committee on "human life extension." In the meantime the Metropolitan, the Provident Savings Life Assurance Company and the New York Life Insurance Company have made special efforts to preserve the health of their policyholders.

Of all the results thus far accomplished, the setting in motion of this great commercial interest on the side of health and longevity is most important.

For a Federal Health Office.

But the chief aim of the Committee of One Hundred has been aside from direct education of the public or enlisting the co-operation of life insurance companies. It has aimed still higher—at the National Government itself. Just as the Department of Agriculture has revolutionized the science of farming so a Bureau of Health may revolutionize the science of human life.

There are still people who do not seem to realize that one of the chief effects of a strong Federal health office will be not to decrease, but to increase the activity of the State and municipal boards of health. In fact, one of the purposes of a bill before

BURGLARY CHANGES.

The Great Eastern Casualty has launched its caster into the ring for burglary business under the management of Norman R. Moray, formerly of the National Surety and until now manager of the American Bonding's burglary business. With a large and active agency plant already firmly established the Great Eastern will cut a big figure in burglary lines throughout the country under the direction of Moray.

The American Bonding is reported as having selected a successor to Mr. Moray from among the well known New York underwriters, but no official announcement has yet been made.

THE ILLINOIS FIRE COMMISSION AGAIN.

The Illinois fire insurance commission gave a five-days' engagement at Chicago last week. The program was sufficiently varied to appeal to every taste. George H. Holt, president of the Policyholders' Union, presented views of a student of insurance who, however, is not practically dealing with the problems of the business from a company's standpoint. A. F. Dean took up the two sessions on Friday in reading a paper, a discussion of the rating question. P. D. McGregor, Western manager of the Queen, was one of the good practical witnesses. H. H. Glidden, manager of the Chicago Board of Underwriters, told about the board organization, commissions paid and about Cook county rates. The non-board element had a representative in Harry Fox, manager of the Milwaukee Mechanics. The legitimate brokers had their spokesman in J. C. Braden. A. F. Shaw gave the commission a lot of first hand information about London Lloyds. One merchant appeared and registered his kick because the 25 per cent. flat advance in 1902 did not apply to sprinklered as well as unsprinklered risks.

There were other witnesses also, including President Bishop and Vice-President Pellet of the Chicago Board, and several general agents.

Excellent Talent, but—

Altogether it was a fine and representative array of talent, but what was gotten out of it was not altogether satisfying. Manager Glidden of the Chicago Board did say that he understood some companies paid commissions ranging from 15 to 45 per cent. in Chicago, but it was not followed up. Attorney Ryon does the examining of witnesses. The fact that he has drawn out witnesses who presented certain views and has not drawn out those who took other positions has caused some intimation that he was steering the investigation in certain directions. However, the theory has also been advanced that the commission is laboring under disabilities which prevent its going into every subject as deeply as possibly it desires to go. The commission was appointed under a joint resolution of the State Senate and House and not under a regularly enacted law. There is, therefore, some question whether the commission could get before it an unwilling witness if he saw fit to go into court and test the commission's powers. Furthermore, the appropriation is not sufficient to enable the commission to carry on extended litigation in such a case. This has given rise to the theory that the commission to avoid trouble is practically confining itself to the examination of willing

witnesses and that it has to exercise care not to demand of them answers which they may not want to give.

Entirely a Matter of Viewpoint.

George H. Holt had a number of views to express, such as might be expected from a man who has been intimately connected with insurance from the standpoint of the assured and has given it a study such as few assured have. Mr. Holt believes in the State's securing classifications and results by classes, with a view to basing rates on experience. Mr. McGregor, on the other hand, practically held that individual or combined experience as a mathematical basis of rates is no good, and gave examples to back up his position. Mr. Holt's view is that of the student viewing the business from one side, Mr. McGregor's that of a manager whose business it is to make money for his company. He is a student of the business, but his theories, whatever they may once have been, have been tempered and changed by experience and business exigency. In his paper Mr. Dean gave endorsement to Mr. McGregor's view that a trustworthy mathematical basis for rates cannot be worked out of combined experience. While neither of these men put it in that form, the testimony of both tended to bear out the view so strongly held by some that in fire underwriting no system can take the place of sound experienced judgment.

Manager Glidden, of the Chicago board, gave the commission some interesting information. He also made one statement which was amusing, when he attempted to justify the higher preferred rates in Cook county than outside of it on the ground that in Cook county a much larger portion of the preferred business is occupied by tenants than outside. It was that kind of information which called out the remark from an onlooker, "They seem to be seeking explanations and they generally find them."

Lloyds and Bombs.

A. F. Shaw gave interesting and valuable information on London Lloyds. So interesting were some of his statements that one of the city newspapers the next morning practically ignored the session except to relate as startling news that a number of Chicago business men have their property insured in Lloyds against damage by explosions of bombs. As there have been thirty-odd such explosions in Chicago, presumably in a war among gamblers, bombs are a live topic in Chicago. Mr. Shaw presented the argument that it was not advisable to attempt to regulate London Lloyds unless by uniform State laws, as otherwise all the Lloyds busi-

ness would be written from States which had no regulations. In other words, Chicago Lloyds brokers would have to operate from Hammond, Ind., if Illinois sought regulation.

E. G. Halle, Western manager of the Germania, who was one of the non-union leaders in the movement three years ago to reduce expenses in Chicago, thinks the States better do what the companies are unable or unwilling to do—place a reasonable limit on commissions.

Abuses Not to Be Overcome by State.

Up to the present time the commission has received almost nothing in the way either of arguments or information favorable to State rate making or State regulation of rates. Some of the present abuses in the business have been brought out, but the testimony of experts—and a large percentage of the witnesses may be called experts—has not shown that they are subject to improvement or correction by the State's interference. The testimony rather has shown the practical difficulties which confront managers, and which have to be solved as best they may. Letting the light in on the abuses has not been without its advantages. Already it has stopped the too promiscuous granting of relief rates in Illinois. A confession of the sins of the business calls attention to them and impresses those who may be able to do something for their cure with the need of exerting their utmost influence lest the Legislature with its little knowledge attempt to do something.

It is believed that the commission will probably recommend some measure for limiting expenses if one can be devised which will be practical. Messrs. McGregor and Dean both expressed themselves as favorable to such a measure, with the proviso mentioned. However, both pointed out that a limitation on commissions would be evaded in many instances and that a general limitation on expenses would bear down heavily upon small companies.

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

THE PENN MUTUAL LIFE INSURANCE COMPANY OF PHILADELPHIA

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

CALLS FOR RECODIFICATION OF INSURANCE LAW

Although Superintendent Hotchkiss in his annual report, calls attention to the need of a complete recodification of the insurance law, he very modestly admits that to attempt it at this time would be next to impossible. He recommends that fire insurance companies complying with satisfactory deposit law and with sufficient capital be permitted to insure against fire not only on land, but on the high seas, and that the marine companies likewise, in turn, with proper restrictions, be permitted to insure against any of the risks of transportation, including fire on land, as well as on inland waters and the sea.

While taking a very fair attitude concerning State regulation of fire insurance rates, Superintendent Hotchkiss recommends that the State should begin to gather statistics immediately, in order that if the evils complained of in certain localities are due solely to action of the boards of fire underwriters, New York should be prepared to take immediate action. The suggestion is also made that a law with provisions similar to the one prohibiting rebating by life insurance agents and giving the superintendent discretion to refuse them licenses be put into effect to cover, and thus eradicate some of the evils that exist in the fire insurance agency field.

Supervision of Lloyds.

The report comments on the scandals which have characterized Lloyds insurance in New York during the past two decades, and recommends a plan whereby all Lloyds associations now doing business under licenses given by the act of 1892 shall be examined and definitely authorized to continue in business or prohibited from doing business, under such requirements as to unearned premium reserve or departmental deposits as shall be fixed by the superintendent.

A recent investigation of town and county co-operative fire insurance leads to a recommendation that companies of this kind be brought fully within the supervision of the department; those which do business in small localities to be required to file annual reports, on blanks furnished by the department, and to submit to examination; and those which do business in larger territories, and which are known technically as advance premium associations, to be under certain restrictions, as shall be indicated in a bill now being framed by the department.

Many Insolvent Companies Liquidated.

The report calls attention to the importance and far-reaching effect of section 33, by which insurance compa-

nies and associations may be proceeded against and liquidated in case they are insolvent, or so conduct their business that in the judgment of the department their further continuance is hazardous to the public.

Since June 1, 1909, eight co-operative fire insurance companies, three Lloyds associations and three assessment live-stock corporations have been proceeded against. It is reported that but three of the six co-operative live-stock insurance associations which were doing business in New York at the beginning of 1909 still exist, and that "seventeen similar associations have gone out of business in the past fifteen years, leads to the recommendation that the State prohibit the further incorporation of associations of this character. It is, however, recommended that stock companies be authorized to insure live stock, should they so desire."

OLD OFFICERS RE-ELECTED.

The annual meeting of the Fidelity Mutual Life Insurance Company was held at the company's home office on Tuesday last, and the complete old board of directors was re-elected for the ensuing year. Immediately after the meeting the board convened and re-elected the following officers:

President and actuary, L. G. Fouse; vice-president, Alexander McKnight; secretary and solicitor, W. S. Campbell; treasurer, F. X. Quinn; managing actuary, Charles G. Hodge.

Insurance Commissioner Frank N. Julian has sent out a bulletin, urging the municipalities of the State of Alabama to cut down the fire insurance company licenses. The commissioner believes that this is one step toward assisting to reduce the rates.

Eugene Saterlee, president of the Rochester German Insurance Company and also president of the Lincoln National Bank, died at his home in Rochester, N. Y., on Friday last, after a short illness.

NEW ENGLAND INSURANCE EXCHANGE ANNUAL.

The annual meeting of the New England Insurance Exchange last Saturday morning attracted a large attendance.

J. W. Grover, chairman, submitted the report of the executive committee for the year. He gave statistical details respecting the extensive growth of exchange work of late years; also noted the usual satisfactory financial condition of the exchange.

Reviewing the year he said in part:

The reduced rate clause rules of the exchange, put in force in Maine, late in 1908, have, we believe, been quite satisfactory to agents at large, as little criticism having been received as could be expected, on the introduction of a measure of this kind.

Fifteen new tariffs have been printed and distributed, and nine are in various stages of preparation, of which five will probably be issued within the next sixty to ninety days.

The standard forms for incubators and brooders were revised, during the year, and explosion and demolition clauses, with suitable charges for their use, adopted and promulgated.

Minimum rates for unprotected dwellings, in Massachusetts, have been adopted; and suggested minimum rates on lumber are now before the exchange for action in the near future.

Stamp clerks were installed in New Bedford and North Adams, and the exchange has voted that such office be also established in Pawtucket.

Country clubhouses, of all descriptions, were transferred to the jurisdiction of the summer hotels committee.

The matter of establishing a central rating bureau for electric light and power stations and electric railway properties was given careful consideration by the exchange at three very largely attended meetings, and, although the vote was very close, the exchange finally declined to approve of the suggestion.

For Greater Uniformity.

The exchange has taken part in a preliminary conference between various Eastern underwriting organizations, looking toward securing a greater uniformity in the matter of general forms and clauses used by the different associations. A permanent organization has been effected, and the exchange has appointed delegates to represent it in this organization.

During the past month there has been mailed to all local agents, companies and active members a new publication, by the exchange, called an Agents' Manual. Heretofore, in promulgating general legislation to agents, it has been necessary to issue separate sheets for about one hundred and twenty tariffs, at a considerable expense and possibly not as promptly as might be desired. This manual is now in effect and will remove from all new tariff books general rules and regulations, and enable promulgation of any specific action in one set of notices.

I am very glad to report that where we have had considerable trouble in the past year with "Out of Board"

agencies, all matters have now been put on a basis of harmony, and suspended members reinstated; and with in the knowledge of the chairman there is no section where there are agents out of the board, where boards exist.

The report closed with the following recommendations, the first of which is of special interest at the present time:

As to the future action of the exchange, I would call your attention to the growing attack being made upon our business, in various sections of the country, to the extent of "State Made Rates," etc.

It might be wise for this body to establish what might be called a "legislative committee," whose duty it would be to keep in touch with matters of this nature.

Committees Are Too Large.

I would call attention to the need of some action being taken in the matter of the so-called "standing committees" appointed by this body. Our committees are too large and cumbersome, and what is "everybody's business" gets no attention. It would seem as though it should be possible to materially reduce the membership of our various local committees, and put them more in accord with the size of committees, of this nature, in other organizations.

I would recommend that action be taken toward establishing minimum rates for unprotected dwellings and barns (other than farm and summer property) in other New England States along the lines adopted in Massachusetts.

It would seem in order that action be taken toward establishing a basis for rating protected property in various cities and towns of Massachusetts, by classifying the places in accordance with fire protection, building laws, conflagration hazard, past record, etc., so that towns of the same class in different sections might have the benefit of the same rates, and enable us to protect ourselves against charges of difference in such rates in these different sections. This has had considerable attention in the past, without result, but it would seem to me advisable now to protect ourselves against questions in the future that we might find difficult to answer.

I would also recommend, for the consideration of the incoming administration, the applying of the reduced rate rules to all classes of risk, having particularly in mind the more expensive class of dwelling property, where insurance to value is usually much lighter than where smaller values are involved, and loss from the same amount of fire much greater.

William F. Rice, who, as president, has for two years past guided the affairs of the exchange to general satisfaction, spoke as follows in part:

A year ago at this time a gentleman from the Cape launched in these rooms a craft he termed a "Ship of State." He graphically described the breakers, the high seas, the outer and inner harbor, and in electing me captain of this ship predicted that my rotund figure in promenading the quarter-deck would insure a good full sail, by the outer harbor and into port.

Gentlemen, that ship of State is

warped into the pier, and as we throw out the gang plank I am issuing the order to the administration of 1909, "All ashore that's going ashore."

Better Attendance Last Year.

During the year the exchange has held 37 meetings, at which the average attendance has been 74, about 20 per cent. more than ever before. I will not at this juncture attempt to state the reason why; possibly that is well known.

There were at the beginning of the year 148 active members; eight have resigned, three have died and 20 new members have been elected, making a total at the present time of 157.

The honorary membership at the beginning of the year was 73. One has resigned to become an active member, three have died and three have been elected, making an present honorary membership of 72.

As I have previously recommended, I repeat, the earnest workings of each and every member are solicited; participation in exchange matters and debates by the younger members, the prompt attention to rate matters which come before specific committees, keeping in touch with improvements installed in risks, whether in part or complete, the avoidance of pigeon-holing these matters, thus insuring prompt attention in dealing with these subjects, most decidedly a factor in appealing to the companies, agents and the public, keeping our work ever promptly up-to-date, and avoiding delays that frequently exist. Uniformity of action in all branches of our business, in all matters that concern the exchange, are likewise of vital importance, and proper legislation along these lines should be foremost in the minds of our members.

The election of officers for the ensuing year resulted as follows:

President, J. W. Grover, special agent Phocnix, England; vice-president, Walter Adlard, special agent, Continental; W. T. Furness, special agent, Commercial Union; George Shaw, special agent, Agricultural; executive committee, W. H. Lewis, special agent, National of Hartford, chairman; H. L. Hiscock, special agent, Aetna; W. H. Hellyar, special agent, Fire Association; A. H. Mills, special agent, Boston & Old Colony; A. L. Bliss, special agent, New Hampshire.

Charles E. Parker and William H. Smith, of Hartford, Conn., resigned their active and were elected to honorary membership in the exchange.

RECOMMENDS CHANGES IN MASSACHUSETTS INSURANCE LAWS.

Commissioner Hardison, of Massachusetts, has made the following recommendations for consideration by the Legislature of 1910:

That the laws applying to domestic insurance companies be so amended as to make clear whether those laws apply to such companies outside of Massachusetts as well as within.

That section 121, chapter 576, acts of 1907, be so amended as to make the larceny provision thereof effective, for the reasons set forth on page 22 of part 2 of the fifty-fourth report of the Insurance Department.

That sections 32 and 34, chapter 576, acts of 1907, be amended as and for the reasons set forth beginning on page 11 of part 2 of the fifty-fourth annual report of the Massachusetts Insurance Department.

That an act be passed regulating policies insuring against accidental bodily injury or disease issued in this commonwealth, and regulating companies issuing the same.

That subdivision 4, section 37, chapter 576, acts of 1907, be so amended that under certain safeguards insurance companies may make loans secured by mortgage on household estates, and no insurance company shall hereafter make loans with mortgages as security, except as set forth in said sub-division 4 as amended.

That section 1, chapter 511, acts of 1908, and section 69, chapter 576, acts of 1907, be amended so as to make it clear that no benefit may be specified in a policy of insurance except a money benefit, as is specifically permitted by law or is appropriate to the kind of insurance which the policy covers.

That section 80, chapter 576, acts of 1907, be so amended as to exempt the companies subject to such section from the obligation to pay surrender values or give other surrender options on account of the annuity reserve of policies, providing that their proceeds be paid by certain installments followed by an annuity payable during the life of the beneficiary.

That section 80, chapter 576 of the acts of 1907 be so amended as to permit the payment of the proceeds of a policy which, by reason of default in premium payments, becomes automatically paid up, in one sum if the contract shall so provide.

That section 94, chapter 576, acts of 1907, be amended so as to give any domestic insurance company authority to place with companies authorized in this commonwealth any insurance of the classes which it has authority to transact, and which it does not desire to cover by its own policies and to receive commissions thereon.

That a fraternal beneficiary corporation transacting business under the provisions of chapter 119 of the revised laws, which divides its members into classes, any one of which is assessed a rate which purports to be level for the whole period of life or after some specified age, shall ascertain annually the amount which each

of said classes pays for the death fund in excess of its own current mortality cost, and shall hold such excess and the interest accretions thereon for the benefit of the classes which respectively contributed; and that such other amendments be made to said chapter as shall give full force and effect to this recommendation.

That chapter 119, revised laws, be amended so as to provide that the Supreme Judicial Court shall have power to enforce by injunction compliance with the provisions of section 13 of said chapter relating to the transaction of business not authorized in this commonwealth.

Edward Marsh, President B. L. U. A.

At the annual meeting of the Boston Life Underwriters Association, held at Young's Hotel, Tuesday afternoon, Edward Marsh was unanimously elected president of the association for the ensuing year; James H. Lake and Charles H. Flood vice-presidents; Clarence C. Miller, secretary; Francis Marsh, treasurer; executive committee, Vernon B. Swett, T. Howard Lewis, Charles E. Fish, Geo. D. Crawford, H. M. Chamberlin.

The new president is associated with his father in charge of the Boston city agency of the John Hancock. Francis Marsh has been treasurer of the association ever since its organization; Edward Marsh has been its secretary for the past two years and will make a good president, as is to be expected from the worthy son of a noble sire.

Conspiracy Charged.

In the Superior Criminal Court at Boston the Suffolk County Grand Jury on Saturday last reported indictments against Samuel I. Gordon, Michael Rudnick, Bernard Davis and Morris Rudnick, charging them with larceny and receiving stolen goods. The circumstances leading to this action were detailed in "The Chronicle" of December 2, 1909. Gordon is also charged with burning a building, and the two Rudnicks with being accessory before the fact. Another in-

dictment in seven counts charges Gordon, Davis and the two Rudnicks with having conspired to defraud insurance companies out of policies aggregating \$35,000 by burning a building on Summer street on June 19, 1909.

The Insurance Committee

of the Massachusetts Legislature for 1910 comprises **Senators** Nash, of Plymouth; Turner, of Bristol; Harvey, of Middlesex; Denny, of Worcester, and **Representatives** Holt, of Springfield; Montague, of Boston; Holbrook, of Stoughton; Doane, of Middleboro; Vinson, of Boston; Stone, E. D., of Ayer; Wells, of Haverhill; Cavanaugh, of Everett; Sullivan, of Boston; Hennebery, of Worcester; Ducey, of Charlestown. The committee has organized with Representative Wells, of Haverhill, as clerk. Holt, Montague and Holbrook were also on the committee last year. It is considered that this year's committee is stronger than last year's.

New England Brevities.

Edward A. Northey has been appointed general manager of the New England Bureau of United Inspection, a position he is well qualified to fill by reason of his experience as assistant to Mr. Hilliard, who recently resigned as general manager.

In the Massachusetts House last Friday, Representative Conway, of Boston, presented an old age pension bill, providing that the Commonwealth shall pay a pension graded according to the means of the pensioner, to any person over 65 years of age who has been a citizen of the Commonwealth for at least twenty years, whose yearly income does not exceed \$200, except that a person shall be disqualified if he has habitually failed to work according to his ability.

An auto combination wagon, at a cost not to exceed \$5,500, has been ordered for the Malden (Mass.) fire department from the Knox Automobile Company.

All agents should remember that man is made up of three elements, i. e., SELFISHNESS, EGOTISM and CURIOSITY. One of these characteristics predominates in every interview. The Philadelphia Life Insurance Company is now issuing a SPECIAL INSTALLMENT CONTRACT which gives the greatest amount of insurance for the least money, and which returns to the insured, if he lives, all the money he pays in with a profit, at the end of 20 years. THIS APPEALS TO HIS SELFISHNESS.

It gives him the largest amount of face value insurance and enables him to leave the largest possible estate for the money invested. THIS APPEALS TO HIS EGOTISM.

When you state to him that you can give him so much insurance for so little money you HAVE AROUSED HIS CURIOSITY.

Write Perry to-day for particulars.

THE PASSING OF THE PROMOTER.

For some unknown and unknowable cause O. L. Van Laningham, promoter, late of Chicago, St. Louis and other polling precincts, is no longer to be seen around the recently transplanted offices of the United Insurance Company at 100 William street, New York. It is generally rumored that he has abandoned this ambitious fifty million dollar child of his imagination and New York on a base of operations and sought new fields on the Pacific Coast for the exercise of his talent, and that he will content himself hereafter with modest and rational plans that appeal to people who understand insurance. This, however, may not be taken as a permanent resolution because the fever of the adventurer and empire builders is intermittent in type and is never entirely eradicated from the system, therefore Mr. Van Laningham will no doubt be heard from again.

There is a view to be taken of his two or three months' sojourn in New York and his quick perception of his error and retreat that is creditable to his judgment. Thousands of "prodigies," in glittering armor, have tackled Wall Street with undaunted faith in their ability to conquer it, only to shortly retire in utter dismay and confusion, sadder, wiser and, usually, broke.

The day of the promoter of insurance companies was destined to be a short one, because he was ignorant of what is essential in underwriting and could not differentiate between insurance corporations and mining stock selling schemes. With his passing there is likely to be a good long period of immunity for insurance from "best ever" promotions.

INSURANCE LIBRARY ASSOCIATION.

At the annual meeting of the above-named association, held in Boston last Saturday, H. L. Hiscock declined to serve again as president, and Gayle T. Forbush was elected to succeed him. Vacancies on the board of trustees were filled by the appointment of W. B. Medlicott and F. R. Galacar, and Edward C. Brush was unanimously re-elected clerk-treasurer.

The annual report of the librarian, D. N. Handy, summarized an interesting and progressive year, during which eight active and fifty associate members were added to the roster of the association.

Recommendations in the address of the retiring president, to wit—that the Boston Board of Fire Underwriters be admitted to equal privileges in the association with the New England Insurance Exchange; that the date of

the annual meeting of the association be changed to avoid coming on the same day as that of the exchange; and that the present limit of expenditure for the association allowed the trustees be either raised or abolished—were committed to the board of trustees for consideration. The board, as constituted for the current year included: Gayle T. Forbush, president; W. H. Boutell, W. B. Medlicott, Edward C. Brush, clerk-treasurer; F. R. Galacar, George Neiley, Charles D. Palmer.

HUDSON COMPANY CHARGED.

The coroner's jury yesterday charged responsibility for the death of two men in a passenger elevator on New Year's Day to the Hudson tunnels (McAdoo) company. The jury charges gross carelessness in not having an attendant in charge of the open elevator car.

The men were Irving H. Lovejoy, a real estate operator, and August Floecker, a railroad inspector. As Lovejoy stepped into the elevator it was started upwards by a repairman and upset him against Floecker, both men falling in a position that caught them between the bottom of the open doorway of the car and the ceiling of the floor above, crushing them both to death.

The elevator hazards of New York are in serious need of attention by the State. It is a daily shiver for those who use them to note the reckless and incompetent boys operating many of them. In view of the daily accidents occurring it is apparent that these operators should be licensed only after being rigidly examined by a competent board.

In a special it is reported that following the recent investigations of the Chicago office of the Phenix, Manager Foulkes, son-in-law of Western Manager Lenahan, has resigned his position as manager of the Chicago branch.

CONSERVING PUBLIC HEALTH.

(Continued from Page 5.)

Congress is to enable the Public Health and Marine Hospital Service to found a school of hygiene for the training of State and Federal health officers. The ground work for public health legislation has already been laid through the formal endorsement of the movement by President Taft's predecessor, numerous congressmen, the Governors of States, State Legislatures, labor organizations, the National Grange, insurance and benefit organizations, such as the Associated Fraternities of America, medical and sanitary associations, such as the American Medical Association, American Public Health Association and a score of other patriotic societies, such as the National Municipal League and some chapters of the Daughters of the American Revolution. The entire membership of the associations which have passed resolutions favoring the objects of the Committee of One Hundred is upward of two millions.

Many States Are Favorable.

Still more important is the political endorsement which has been received. The Ohio State Legislature passed a special resolution favoring the establishment of a National Bureau of Health. The party platforms of some States, Ohio, Delaware and Connecticut, contained planks favoring such legislation, and to crown all, the national platforms of the Republican, Democratic and Independence League parties contained health planks, as recommended by the committee and its allies.

President Roosevelt advocated public health legislation in two of his messages to Congress. President Taft has not alone endorsed the work of the committee, but he has also afforded in his last message to Congress the strongest public health recommendation in the history of the country, and he has intimated that he would later send a special message to Congress on the same subject. When this is done, it will be "up to Congress."

COMBINING FORCES.

Fire insurance underwriters are eligible for first place in the National Civic Federation convention in Washington next Monday. The National Fire Prevention Association will be present, through an able committee, is one of the several units of organizations which have been crystalized in that most influential of all American organizations, aside from the Government itself, the National Civic Federation, of which Senator Root remarked at its meeting at the Hotel Astor in this city last month, that it afforded

the only means available in America for the free expression of opinion from men who were trammelled by diplomatic and conventional bounds. At least, he said something to that effect.

The National Civic Federation is an incubator of ideas of value or near value. It is a National Forum and the National Fire Protective Association will appear at this session, backed by its latest important accretion to membership, the National Association of Credit Men. And it is safe to assert that financial interests of the Nation lean more heavily on them than all others combined.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,
takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy incontestable, and no restrictions upon residence, travel and occupation, after the first policy year, except as to military or naval service in time of war.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

For further information apply to

ADDRESS, AGENCY DEPARTMENT,

The Empire State Surety Co.
NEW YORK

A FEW REMARKS ABOUT EXCISE BONDS.

Last week "The Chronicle" had something to say, supplementary to its several years' weekly sermons, on the folly of stockholders and directors in surety companies permitting their companies going on the bonds of liquor dealers in New York who deliberately, and with malice aforethought, violate the law. The remarks dealt particularly with an incident of the week wherein the secretary of one of them had given utterance to the following enlightening interview:

We have been writing excise bonds in New York and taking all we could get. We considered it good business, as it afforded an opportunity to retrieve losses incurred during the year 1907, when the agents of the excise law were active in New York. A year or so ago we needed money badly, and this looked like a good way to get it without much risk.

We know that it is "dirty money" and that we are in bad repute with the Association of Surety Companies for accepting such business, but after we found that a former New York agent had been writing bonds for places of the class mentioned and had incurred heavy losses through revocations not reported to the home office there seemed no other course to adopt but to go after every dollar in sight.

This created so much comment and so many inquiries from various sources concerning the practice and especially from powerful social organizations and State Insurance Departments that further elucidation of the comment seems in order.

New York State has a peculiar form of excise liquor law. Other States—a dozen or more—have an excise liquor law which is more or less pro forma and innocuous. The New York law is an active revenue producer, and is in potent operation. It therefore presents an individualistic feature that eliminates comparison. This fact has been ignored by the companies from other States operating in New York and provoked the comments referred to by "The Chronicle" in a long series of articles ranging from the moral phase of underwriting to the ultimate effect on the companies' securities.

How the Business Is Done.

Without going into the more than ten years pitiful story of excise bonding development and its record of broken manhood and wreck strewn shores it is sufficient for this purpose to state its status at the moment.

There are more than 30,000 liquor selling places in New York which obtain bonds from surety companies. A fair estimate of what may be termed respectable business, such as high class hotels, wholesale houses, drug stores, interstate steamship lines, etc., would be 30 per cent., the remaining 70 per cent. being the element that must depend upon protection in some

form for immunity from being "pinched."

The respectable business is written, as fire insurance is, by an underwriting agreement under which about the following ratio of division of premium and loss is observed:

American Surety	15
Fidelity & Casualty	13
United States Guarantee	12
Fidelity & Deposit	12
Bankers Surety	10
Federal Union	10
Illinois Surety	7
National Surety	7
U. S. Fidelity & Guaranty	7
American Bonding	5

An Instructive Study for Investors in Surety Stocks.

The percentages of the reinsurance companies affords food for reflection. The ratio of the companies with small resources to the big ones is amazing. The American Surety, for instance, could carry the entire business if it deemed it advisable to do so, but is content with a reasonable portion. The smaller ones seem bent on claiming a share disproportionate to their ability to weather even a moderate cold spell—and getting it.

The Excise Problem.

In order to bring the excise bonding problem down to date for the benefit of those readers of "The Chronicle" who seek underwriting information, it is well to quote the following from a report of the Excise Commissioner:

Statesmen and moralists in all civilized countries have long recognized the evils that are inseparably connected with the traffic in liquor. The enactment of more than four hundred and fifty excise statutes and ordinances in this State alone, and the repeal of all, following an unsatisfactory experience under each, emphasize the difficulties encountered in the attempted solution of the problem prior to the passage in 1896 of the Raines Liquor Tax Law.

In the absence of reliable statistics as to the working of former laws, public sentiment, guided, on the one hand, by hobby-riding agitators and the sporadic efforts of impractical reformers, who worked along emotional, rather than rational, lines, and, on the other, by demagogues and reckless legislators in sympathy with the liquor interests, who took advantage of the reaction resulting from the frequent failure of radical and extreme legislation, fluctuated between prohibition in 1854 and recommendations for free whiskey, as exemplified by the notorious Schaaf bill, which was presented to the Legislature in 1891 and only failed of passage because of the aroused indignation and combined opposition of the Christian churches of all denominations.

Under these conditions, it does not seem strange that the history of excise legislation in this State should reveal, in the main, a drifting, unsettled policy, in which emotionalism and blind impulse at times, and at others an almost brutal disregard of the moral interest involved, have been factors far too dominant to admit even of a moderate measure of success. It

seems never to have occurred to early excise agitators, or even to many of their modern successors, that laws can not and will not enforce themselves; that the amendment of an unenforced excise statute, or its repeal, and the enactment in its place of a new law furnish not the slightest guarantee of an improvement in excise conditions, unless the change has such a degree of support from public sentiment as will insure its better enforcement.

The proposition that, under popular government, the enforcement of all laws necessarily depends on public opinion, intelligently expressed in the selection of honest official servants who will faithfully perform their sworn duties in respect to such enforcement, is the simple truth that lies at the root of the whole matter. Frequent amendments and changes, except for the correction of proved defects, are in the large majority of cases, a hindrance rather than a help. Frequent alterations in the statute lead to confusion and misunderstanding in the public mind as to its actual provisions, and have a tendency to deprive a good law of the support of right-thinking citizens, which it would naturally receive if well understood, and without which the universal execution of any statute is practically impossible.

A careful reading of the Liquor Tax Law will disclose the fact that an adequate remedy is provided in that statute for every excise abuse. The conclusion inevitably follows that the continuance of excise abuses is due to the non-enforcement or the imperfect execution of remedies already provided, and not to any defect in the law itself, as is quite popularly supposed.

President Roosevelt, in writing of his experience as Police Commissioner of New York in the enforcement of the excise law, analyzes clearly the difficulties and needs of the excise problem when he says: "The one all-important element in good citizenship in our country is obedience to law, and nothing is more needed than the resolute enforcement of law."

For an example of what the sureties pay out annually on the forfeitures the report for 1908 is a fair average. It shows the expenses of the department as \$359,115, against which was an income from penalties of \$325,503, derived from 329 actions, of which 115 were in New York County (Manhattan Island). Of a total of \$320,000 penalties collected practically half was from Manhattan Island.

In 1900 the penalties collected from sureties amounted to \$32,594, an increase of 1000 per cent. in seven years.

Something to Think About.

These penalties were the work of about 60 inspectors, and the recent proposal to increase this number to 150, based upon the simple calculation that the income of the department would be increased 150 per cent., is significant. In simple terms, the excise business is an undeveloped field and an enticing prospect for the adventurous exploiter.

It is required of surety companies

(Continued on Page 14.)

WILL THE WESTERN UNION BE REORGANIZED.

A lull appears to have come in the speculation as to what the Continental is going to do in the West. The various questions and possibilities have been discussed so much that there is little new to talk about until somebody makes a move. The opinion is held in some quarters that no move may be made for some little time. When the stockholders of the Fidelity and of the Phenix confirm the merger agreed upon by the directors and the underwriters' agency, backed by one union and one non-union company is actually put into operation, it may force a situation that will require some action. Thoughtful men in the business are discussing seriously the probability of a new alignment of companies, either by amendment of the rules of the Western Union or by its dissolution and the formation of a new organization on a platform on which more company executives can stand.

AGENTS MUST TAKE IMMEDIATE ACTION.

Henry H. Putnam, secretary of the National Association of Local Fire Insurance Agents, has sent out a "bulletin" calling for a vigorous protest from local agents desiring to retain control of the insurance on the Bell telephone plants. He believes that a vigorous kick to all local managers of the telephone company will block the proposal to concentrate the control of all the insurance in the hands of a Philadelphia brokerage firm. He says:

This is a case where the interests of local agents are very widely affected, and a universal protest from all quarters against this proposal would have due effect upon the telephone company. Prominent local agents can handle this insurance just as advantageously for the Bell Company as a non-resident broker unfamiliar with the local conditions. Moreover, the friendship and good will of the local men is more important to the telephone company than the favor of some particular brokerage firm.

ABOUT EXCISE BONDS.

(Continued from Page 12.)

to reserve one-half of the premiums on outstanding business. This is based on the general average of new business being written about as rapidly as the old expires.

Excise business is an exception to this rule because 90 per cent. of it is written in one month each year, the same proportion expiring twelve months later. As these bonds go into effect on October 1, it has been customary to treat as unearned on December 31 (date of reports) 75 per cent. of the premium received upon such business.

These premiums have been treated as fully earned with the termination of the life of the bond, thus making a large addition to surplus on September 30. As a matter of fact, it would not be difficult to estimate very closely at any date the amount of premium unearned.

Criticism and Suggestion.

Based upon the practice of the Excise Department with reference to action upon these bonds, such a course is mistaken. It is very exceptional for the Department to bring a bond action during the life of the license which is covered by the bond. By law, the department has three years from such a time in which to begin action upon the bond.

To meet this situation, and in fairness to the laws of average, a certain proportion of the earned premium should be held in a loss reserve. To do otherwise is to trust to the company to maintain a surplus equal to such a loss reserve.

Of the amount so credited in any one year there should be released

One year from the expiration of the license..	50 per cent.
Two years from the expiration of the license..	33 1-3 per cent.
Three years from the expiration of the license	16 2-3 per cent.

An Illustration.

If a surety company wrote \$50,000 of excise bond premiums on October 1, 1908, liability incurred (1,250 bonds of \$1,800 each) \$2,250,000, and its last annual statement showed:

Unearned premium reserve, nine-twelfths of whole, \$37,500; (a) loss reserve, one-half of three-twelfths, \$6,250; cost, agents' commissions and home office expense, \$25,000; total, \$68,750; surplus reduced to carry business, \$18,750.

This business would stand on the company's books on September 30, 1909, as follows:

(b) Loss reserve on 1908-9 business, \$25,000; costs, \$25,000,

In its report for December 31, 1909, the excise loss reserve would stand:

(c) On business of 1908-9, \$25,000, less three-twelfths of 50 per cent., \$3,125—\$21,875; on business of 1909-10 (see a), \$6,250—\$28,125.

In a report of December 31, 1910, the loss reserve would stand:

(d) On business of 1908-9, \$25,000, less (50 per cent. plus three-twelfths of 33 1/3 per cent.), \$14,075—\$10,925; on business of 1909-10 (see c), \$21,875; on business of 1910-11 (see a), \$6,250—\$39,900.

In a report for December 31, 1911, the loss reserve would stand:

(e) On business of 1908-9 (last entry), \$25,000, less (50 per cent. plus 33 1-3 per cent. plus three-twelfths of 16 2-3 per cent.), \$22,250—\$2,750; on business of 1909-10 (see d), \$10,925; on business of 1910-11 (see c), \$21,875; on business of 1911-12 (see a), \$6,250—\$41,800.

The Bankers Surety Case.

As the Bankers Surety is the center of interest in this connection, it is well to give it a word. When the remarks of Secretary Craig came to the office of "The Chronicle" President P. W. Harvey was immediately asked by wire for a confirmation or a denial of what was considered the most remarkable statement from an "underwriter" that had appeared in print in an age. He replied referring the matter to President George F. Seward, of the Fidelity and Casualty, as stated in the previous article.

Desirous of affording no reasonable opportunity for mistake, "The Chronicle" on Monday wired Hon. Harvey D. Goulder, chairman of the Bankers board, as follows:

Would be glad to have an expression from you of the Bankers Surety statement in last week's "Chronicle." Columns of "Chronicle" open for anything you desire to say. Mail answer to-day.

The reply to this is embodied in the following, which was immediately forwarded to Mr. Goulder, and to which no reply has yet been received:

We have just received your wire, and, it being too late to interview Mr. Seward to-day, I have addressed him the following note:

We are just in receipt of the following wire from Hon. Harvey D. Goulder, in response to a wire to him to-day, relative to the article in last week's "Chronicle," a copy of which we enclose you:

"I am not familiar with matter referred to in your telegram, but on inquiry am told Mr. Seward, president Fidelity and Casualty Company, is familiar with the matter throughout, and suggest you ask him."

We expect to have another article on the subject in this week's issue, and if there is anything that would be of interest from a news standpoint that we could bother you about I would be

very glad to come over to see you. I think you will appreciate that we realize that this is a matter about which we do not care to trouble you, and we have refrained from making a call on that account. However, if there is anything, I would appreciate it very much if you would kindly call me up on the phone to-morrow morning.

We wired Mr. Harvey the other day, and received from him an answer similar to yours, but did not deem it worth while to bother Mr. Seward with a matter in which I think you know he is not interested, so far as his company is concerned. If Mr. Seward responds to this request to-morrow morning, we will be very glad to use anything that he may say.

We feel that the matter deserves your official and personal attention, and toward that end our inquiry was directed. If your company and its officers cannot respond to our request, you must admit that it would be inadvisable on our part to consult with the officers of another company regarding your affairs, and therefore we must refrain from doing so, unless invited by Mr. Seward.

The Bankers New York Business.

The New York State Insurance Department's printed reports for 1908 and 1909 show two years' business of the Bankers Surety in the State, as the following figures set forth:

	Premiums.	Losses Paid.
1907.....	\$88,392	\$14,551
1908.....	139,540	81,694

The jump of the loss ratio from about 15 per cent. in 1907 to 60 per cent. in 1908 is phenomenal, but confirms the statement of Secretary Craig that "a year or so ago we needed money and went after it," or words to that effect.

A Bit of History.

The Bankers has held a unique position among surety companies from the day of its birth. (Perhaps "singular position" would be a better term.)

With an incomparable personnel of shareholders and directors, and the very highest grade of gilt-edged assets, which continue, it began life actively in 1902 with a thoroughly incompetent general management, which it tolerated patiently and with long suffering for several years and then made a change, swapping the devil for a witch.

At no stage of its existence has the Bankers had even a modicum of underwriting experience or surety knowledge at the helm. The directors have hired men to run things and hoped for results other than those which developed. One of its early ventures away from home was to New York, and it became an easy mark for the frenzied financiers, or at least one of them, Rothschild by name, who died in Sing Sing Prison a short time ago. To him the Bankers became surety as administrator or executor for some estate. He defaulted and earned a prison term, and the surety paid some-

thing like \$85,000 for one dose of "experience."

From this same Rothschild incident developed the suicide of the Bankers countersigning attorney in this city, Mathews, just before his trial on indictments which he evidently realized would send him to join Rothschild. The company also went in for excise business under about the same degree of surety intelligence that executed the bond for Rothschild. For some years it has been knocked about, swayed and buffeted in the excise currents, until the evident desperation implied and expressed in the confession attributed to Secretary Craig seems a perfectly natural and logical sequence.

How Stocks Are Effected.

During the past two years there have been at least two capable proposals put out for a merger between two or more of the drifting casualty and surety companies, based upon a recognition of the fact that there were assets worth saving from the stupidity of their caretakers. In each case the negotiations were brought right up to the subject of excise liability probabilities and there terminated abruptly. In one case one surety company was writing excise bonds and another was not. An appraisal of the shares of each was called for, and, while it was easy to approximate the cash value of one, it was found that an application of the simplest rule of "ratio and proportion" would soon impair and bankrupt the other, and all efforts were abandoned.

"The Chronicle" has warred against the writing of these bonds for Raines law hotels, first, because it is injurious to correct principles of insurance and has no place in underwriting; second, because it creates an unsanitary condition in which morality and bet-terment are constantly menaced.

For these reasons it has worked shoulder to shoulder with the uplift forces to impress upon the surety companies the folly of their practices in excise bonding and the inevitable near-at-hand disaster it entails.

INSURANCE COMPANY

Established 1836. Entered U. S. 1848.

The statement of the condition of the United States Branch on the 1st of January, 1909, in accordance with the laws of the State of New York, is as follows:

ASSETS \$13,212,749.70
LIABILITIES 8,238,870.50

SURPLUS \$4,973,879.20

As an illustration of the Company's practice in maintaining its Assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

THUS SHOWING EXCESS OF EXPENDITURE IN THE TWO YEARS OF \$2,710,650
AND INCREASE OF ASSETS IN THE SAME TIME OF 1,110,929

PROGRESS of the United States Branch: Net Fire Premiums—1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,028,010; 1898, \$4,079,422; 1908, \$7,427,617.63.

LOSSES—The amount paid in satisfaction of fire losses in the United States to the beginning of the present year was \$115,772,000. This large sum, in conjunction with the growth of the Company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Seeking Freedom From Intolerable Abuses.

The various meetings in Washington this week, including the conference under the auspices of the National Civic Federation upon uniform legislation, the meeting of the National Association of Life Insurance Presidents, the conference of Governors of States, and the conference upon Employers' Liability and Workmen's Compensation, have very especial significance, in view of the recent message of President Taft, recommending that provision be made in the Federal statutes for the organization of corporations with Federal charters, and of the bill which has been introduced in Congress to carry out this design.

There is little doubt that there is going to be a more active and thorough-going movement and agitation in favor of uniformity of laws throughout the country, and also in favor of freeing some businesses from almost intolerable interferences. The purposes of the Federal incorporation act are largely to obviate the existing difficulties of this nature.

"The Chronicle" does not have room for even a synopsis of what is proposed but the following is a necessarily brief statement of what the effect of the same may be upon insurance interests:

Federal Licenses.

If insurance companies accept the opportunity to reincorporate under the Federal laws, they will in many ways be freed from interference by State authorities, though by no means completely so. Thus, for instance, they will have the right to do business throughout the entire nation, and this right can only be denied because they fail to comply with the regulations of that business within a

given State. It is not probable that it could be denied, for instance, because they fail to comply with the requirements of the State otherwise. In other words, this legislation would, so far as these companies are concerned, have the effect of absolutely destroying the constantly increasing extension of the regulation by State departments beyond the boundaries of their own States.

Confine Abuses to One State.

Whether or not the State might set up certain arbitrary standards of solvency and enforce the same, even to Federal corporations, and as applying to their business, other than the business within the State, is perhaps a question; but that they will not have the right to enforce any sort of regulations, other than as to the business transacted within the individual State, is certain. The effect of this upon laws regulating the issuance of policies with deferred dividends in other States and upon similarly extra-territorial regulations is not hard to guess.

Real Publicity Requirements.

If coupled, as doubtless it will be, with the inauguration of a publicity bureau in connection with the Department of Commerce and Labor, the proposed legislation, if enacted, might have yet more far-reaching results, because presumably such publicity department would have the power to require all companies, without regard even to whether or not they were doing an interstate business to make full reports to it, precisely as it has been held that the National Government has the power to compel the giving of information, when taking the census. By such means the Federal Government could effectually inform all the people of the country who were inter-

ested, concerning the nature and volume of the business transacted, the receipts and disbursements and the financial condition of all insurance companies. Of course, the publicity requirements could go much further, likewise, and expose whatever shortcomings require to be corrected.

If this plan were adopted, the publicity bureau at Washington would come into direct competition with State departments; and, if its work were thorough, there would soon be a direct issue as to whether the meddling regulation, now at times practiced by State legislatures and departments, was actually being effective or whether the intelligent and thoroughgoing publicity at Washington was producing better results.

Publicity More Efficient Than Compulsion.

There would also be this advantage that the National Government as the Constitution now stands, could not go beyond publicity except as to Federal corporations, and even as to such, could not regulate their interstate business as such. In other words, the National Government would be confined strictly to publicity and if, as is believed by some of the leading experts on insurance, and as was urged by Emory McClintock and by their own actuary, Miles M. Dawson, upon the Armstrong Committee, publicity would accomplish all purposes far more efficiently than compulsion, there could scarcely fail to be a demonstration that such is the case.

The proceedings of the various meetings which have been taking place this week in Washington are succinctly summarized in other columns of this issue of "The Chronicle," so far as the proceedings had been re-

ported up to the time of going to press. The following is an account of what took place at the meeting of the National Association of Life Insurance Presidents:

Wednesday.

Over one hundred companies were represented at the third annual meeting of the association to-day. Thomas E. Drake, Superintendent of Insurance for the District of Columbia, presented "words of welcome," which were responded to by Robert Lynn Cox. Sylvester C. Dunham, president of the Travelers Insurance Company, presided.

The afternoon session was taken up by the address of Charles E. Hughes, Governor of New York, and a discussion of the topics of the morning session. When Governor Hughes left the conference of Governors to address the association many of them left with him to listen to the insurance discussions. The Governor said in part:

Legislative Corruption.

I hope the time is gone by when it will be thought at all necessary to protect the interests of life insurance policyholders by efforts to corrupt legislators. I hope that every desire to approach, in an indirect manner, those entrusted with administrative or legislative functions will be conspicuous in the future by its absence. Publicity, discussion, fair understanding of what you have in view and what is essential to the proper conduct of the life insurance business—those are your guarantees, and those are the securities of the policyholders that you represent.

There have been, from time to time in the past, secret combinations of interests for the purpose of affecting legislation throughout the country; sometimes with a good purpose, to prevent that which was deemed to be inimical; at other times, with a purpose which from no point of view could be commended.

Trust the People.

It is difficult for some to understand that in the insurance business, of all businesses, the fiduciary relationship is paramount. You are handling not your own moneys, but the savings of the people. You are not responsible for the legislation and you have no duty, in any way, by any method which will not stand full and public discussion, to thwart any attack that may be made upon the interests committed to your care. You can, I believe, trust the people if they understand the situation, much better than you can trust those who are purchasable, or run the risk in the future of reaping the harvest which must inevitably be reaped if there is sown in our legislative halls the seeds of bribery and corruption.

"No State Can Live Unto Itself."

Now, I am for the exercise of National power to the fullest extent where National functions are concerned. We shall have in the future, no doubt, a demand which must be met for an extension of national activities to meet the various demands of our increasing population and growing out of the intimacy of our

intercourse. But it must not be forgotten that as essential as are our national activities, even more important, because less recognized, is the maintenance of the system of Government in our States, so that democracy in this great country can be practicable and our ends may be achieved. The permanence in this country of the free institutions in which we take pride depends both upon the national activity and the activity of the States. But when we consider embarrassments growing out of conflicts, how are we to meet them? Well, we have got a little body upstairs of men who represent something in the different States—considering this very question. We are a very practical people, and the safest prophecy with regard to the future is that whatever the American people find to be essential for their welfare they are going to do; and it will be for the future to disclose in its entirety what may be essential to their prosperity. But I believe that no State can live unto itself. I believe that no State can practice a policy of hostility to legitimate enterprise and maintain the prosperity of its citizens. I believe that our relation is going to be so much closer in the future that without sacrifice of the advantages of our dual system, our State comity will be much more apparent in the activities of our several Legislatures. It seems to me quite within the bounds of reasonable prospect that we should be able to point out in our several States where action of State authority is not essential to any proper State interest, and where an agreeable accommodation to the end that we may have an increasing prosperity will be promoted by such modification of laws as will secure, if not absolute uniformity, a much greater agreement than now exists.

New York Laws.

Now, we have had some laws in New York recently, and I am not going to discuss them or analyze them. I have said many times what I think about them and you know as well as I do what my attitude has been regarding them. They are designed to promote publicity to insure economy and to have the business of life insurance transacted without undue interference of management according to the theory of the institution. Policyholders are the companies, not the managers; the policyholders are, in fact, those that provide the funds, not the managers. It is a very difficult thing, however, for the policyholders effectively to be represented. Our companies are so large—I am speaking of mutual companies—that it is almost impossible through any means to secure that form of representation which may be said to represent the actual wishes or the deliberation of such an immense body. But the existence of means for the expression of the wishes of the policyholders acts as a check, a check which any honorable man ought to be glad should exist, upon any attempt to cultivate a personal ambition which may be inimical to the interests of the policyholders at large. The best asset of a life insurance company is fine management that can stand the light of day, reduced expenses, increased returns, a budget sheet which needs no footnotes to explain dubious items, a fair representation of splendid business

ability devoted to what I believe to be one of the finest objects which American enterprise can seek. For I am a life insurance man from the bottom of my feet to the top of my head and there is no business that I more thoroughly believe in or that promises a finer field for ability well exercised.

The morning session was taken up by addresses by L. G. Fouse, George A. Noyes and John A. Hartigan, and follow in order.

Favors Harmony To Federal Supervision.

While he does not openly oppose Federal supervision, L. G. Fouse, president of the Fidelity Mutual Life, believes that uniformity in the requirements relating to life insurance and its administration can best be accomplished "through harmonizing of State laws and practices," and that the present time is most opportune for a concerted effort in that direction. He says:

It is a fact that cannot be controverted that the lack of harmony in laws and practices has been a detriment to the business. In recent years, however, we have been drifting toward uniformity and harmony, and there are many who believe that the laws of the various States can be made consistent and homogeneous, and that it would be better for all concerned that the business be conducted under such improved laws rather than under a centralized administration. Hence, if the uniformity hoped for can be accomplished there will be no need of national laws and supervision.

Real Publicity.

Mr. Fouse sees an opportunity where Congress can make amends for the recent enactment of the corporation tax law which places a burden on policyholders. If put into effect the amendment would render much assistance to the cause of uniformity of State laws and practices. He suggests that "by an appropriate law, Congress could establish in the Department of Commerce and Labor a bureau of insurance in which companies transacting business in more than one State would be required to annually file a report of the transactions of the previous year upon appropriate blanks which should and undoubtedly could be made uniform with the present Insurance Commissioners' blank. Such bureau could furnish to the several insurance departments all the information desired regarding any particular company, and could publish a synopsis annual report to be furnished to the companies and State insurance departments interested." This would still leave the supervision to the States, but would do away with the duplication of annual statements to forty-six different States, and it should necessarily follow that there would be conformity in State requirements.

Varying Provisions.

Among the problems that arise from the lack of uniformity and conflicting State laws and practices, that confront the management of an insurance company, the speaker thinks that the "principal obstacle to uniform policy provisions is the varying provisions of the laws regarding the application of dividends where the policyholder neglects to inform the company, after he has received notice of a dividend, how he desires such dividend applied." For, says he:

In one State the law requires that the policy shall provide that in such event the amount of the dividend will be held to the credit of the policy and be payable in cash at maturity, or withdrawable in cash at any anniversary of the policy. In eight other States the policy must provide that the dividend in that event will be paid in cash, and in five States the policy must provide that the dividend will be applied to the purchase of paid-up additions. There is no way of harmonizing these provisions; separate policy forms are necessary, and separate treatment of the policies in the records of the company, entailing extra labor and expense in the proper conduct of the business. As the prime object of the contract is life insurance, the laws should be uniform in this particular, and should provide in all cases for application of dividends to the purchase of paid-up additions to the policy.

Educate The People.

Mr. Fouse is willing to admit that some good has been accomplished in the line of uniformity by standard policy provisions, but finds them a "most fruitful source of annoyance." Therefore he asks that they be done away with and reasons thus:

The sole object of the standard provisions seems to be to avoid the necessity for thinking on the part of the people who purchase the contracts. They are supposed to make it easier for the people and to reduce the liability of mistakes on their part. It seems to me that far better results would be achieved through a general effort to educate the people on underlying principles of life insurance. This accomplished, it would not be necessary for legislators to attempt to do their thinking for them.

Favors Deferred Dividends.

The law of Minnesota, Massachusetts and New York, limiting the amount of surplus or "contingency reserve," Mr. Fouse believes is the "most illogical and dangerous innovation that has been made in the laws affecting life insurance." In other words, the amount of unapportioned surplus which a company ought to retain as a contingency reserve, should be left entirely to the discretion of its officers. To be brief, he is opposed to confining companies in all cases to annual dividends and favors deferred dividends in special cases, such as impaired lives. He de-

clares that the prohibition of deferred dividends has impaired a company's usefulness and the right of the insured each year to elect how his dividend shall be applied, "permits a selection against the company which will unquestionably result in great injury to the policyholders generally. So long as the insured life remains unimpaired, the dividends will be withdrawn in cash, but as soon as any unimpaired, the dividends will be applied to increase the insurance."

"The companies should be permitted," argues Mr. Fouse, "to require the insured to elect at the outset how the dividends shall be applied, and any change thereafter should be permitted only upon approval by the company in the same manner as new insurance is granted."

Legislators Unfair.

Mr. Fouse closed with an appeal that the companies be saved from further embarrassment and unwise legislation. He said:

The effort now being put forth in the interest of uniformity should deal with fundamentals; all matters of detail should be left to company management. The management of a company is expected to perpetuate its existence, to carry out its contracts, and to conduct its business in the interest and for the benefit of its policyholders. It is not fair to them that they should be handicapped and embarrassed in doing it. It is folly also for the legislators to imagine that they can do the thinking for the people.

If the laws are sufficiently stringent to punish abuses, to require publicity of what is done, and severe enough to render a wilful misstatement perjury, it is not necessary for the lawmakers, who of necessity are uninformed in the details of the business, to prescribe in detail what shall and what shall not be done. Uniformity is of the greatest importance, but second to it, for the proper development of the business, comes competition. This should be encouraged and not repressed. It is right and proper that the laws should, however, encourage fair competition only. All that is unfair in competition is readily discoverable and should be made punishable. Then co-operation, which is third in importance, may be expected.

Terse Suggestions.

Judge George H. Noyes, general counsel of the Northwestern Mutual Life, in his paper on "Uniformity Department Rulings," summarily closes his address with the following terse suggestions to Insurance Commissioners:

Recognize where you must the lines which divide the States; promote where you can the movement for uniformity of laws in the States; and adopt in all cases of interpretation the doctrines of stare decisis and of judicial comity.

Judge Noyes confined his paper principally to the rulings of the departments of insurance, and under the head of "The Nature of Official Acts" said:

The extensive and important powers given to commissioners and other heads of Insurance Departments have not as yet been clearly defined by the courts nor has the character of their official acts been fully determined and properly classified. Some of such official acts have been designated as purely ministerial; others have been denominated as administrative or executive; while still others have been considered judicial or quasi-judicial. As a general rule, however, where an official act has required the exercise of judgment and discretion on the part of the officer, it has been held to involve the exercise of the judicial function, and when so exercised the act of the official has been treated as final and conclusive. Such determination cannot be reviewed by the courts unless the statutes expressly provide for that remedy.

The Judge then sums up the existing statutes in the several States and the powers conferred on the heads of such departments, as follows:

(1) As to Licenses to Companies and Agents:

The Commissioners of Insurance in nearly all States are given the power on certain grounds to revoke the licenses given to companies and agents to transact business, and with but few exceptions their decisions are final, no provision being made in the statutes for an appeal or a review by the court.

(2) As to Policy Forms:

There are eighteen or more States

All agents should remember that man is made up of three elements, i. e., SELFISHNESS, EGOTISM and CURIOSITY. One of these characteristics predominates in every interview. The Philadelphia Life Insurance Company is now issuing a SPECIAL INSTALLMENT CONTRACT which gives the greatest amount of insurance for the least money, and which returns to the insured, if he lives, all the money he pays in with a profit, at the end of 20 years. THIS APPEALS TO HIS SELFISHNESS.

It gives him the largest amount of face value insurance and enables him to leave the largest possible estate for the money invested. THIS APPEALS TO HIS EGOTISM.

When you state to him that you can give him so much insurance for so little money you HAVE AROUSED HIS CURIOSITY.

Write Perry to-day for particulars.

whose laws provide by one method or another that policy forms shall be submitted to the Commissioner of Insurance for approval, and in case of disapproval shall not be used. In all save four of these States it is provided that the action of the commissioner shall be subject to review by a court as competent jurisdiction.

(3) As to Enforcement of other Statutory Requirements:

The statutes of but few of the States provide for an appeal from decisions made by Commissioners of Insurance in the enforcement of other statutory requirements. Such decisions, in all cases where these official acts are not purely ministerial, being by the courts held not subject to review by mandamus or other common-law judicial writ, become conclusive.

In a number of States where the Insurance Commissioner is expressly clothed with the full power of a court "to hear, try and determine" alleged breaches of the law and to enforce his judgments with costs, no appeal is allowed from his judgment. In one State, even where the commissioner is given the power to administer oaths, hear testimony, issue commissions to take depositions, tax costs and issue executions, "all to be done under the same rule as now provided by law for civil actions in the superior court," his decision is nevertheless final.

Under the statutes of many States no notice is required to be given the company or agent of any complaint or charge of violation of the laws nor is there any provision that a hearing of any kind shall be accorded the party against whom the charge is made. The authority of commissioners is under such statutes unconditional and absolute. To the credit, however, of these officials, it may be said that their administration of the statutes has, as a rule, been more just and equitable than the terms of the statutes. They have in practice supplied many things which rendered the enforcement of the statutory provisions less arbitrary and severe, and have thus given to their proceedings the fair and impartial character which is recognized and adopted by the courts.

Method Of Procedure.

Until these stringent and severe provisions are, as they should be remedied by the legislatures, a great service to companies and agents would be rendered if the Convention of Insurance Commissioners should adopt a uniform method of procedure in all cases, somewhat similar to the statutory method recently prescribed in one of the States in case of alleged rebating and in case of alleged misrepresentation. The statute requires that written charges and notice thereof shall be given to the company or agent against whom the complaint is made; the date and place of trial shall be fixed; written findings shall be filed; and, in case the charges shall be sustained, the penalty shall be operative until after an opportunity has been afforded the accused to review the proceedings in a court having jurisdiction of the matter.

Such a method of procedure would deprive the statutory provisions of their arbitrary and unnecessary severity, and would be more in keeping with the fairness which should accompany all hearings before an administrative or judicial tribunal.

A Commissioner's View.

In closing his address on "A Departmental View of Uniformity" the Hon. John A. Hartigan, Insurance Commissioner of Minnesota and president of the National Convention of Insurance Commissioners, very fittingly said:

"In considering laws that may be uniformly adopted, personal, selfish desires and ambitions must be eliminated. Only such laws can be generally enacted and retained as tend to the improvement of the business as a whole, and any law that will have this effect must receive the support of the companies, departments and policyholders."

While this may or may not be taken to heart by the companies doing business in New York, it nevertheless (from past legislative experience) applies directly in their case.

Criticises "My Company" Attitude.

In treating of the attitude of the average legislator who listens with unheeding ear to the arguments of the insurance company's officer or attorney, Mr. Hartigan explains the natural distrust, for, as he says, "officers too often adopt the attitude expressed by 'my company'—the attitude of the owners of a proprietary business." Distrusting his own grasp of so technical a subject, the legislator awaits the voice from home, the postal-card request from his constituents, which does not come. On the other hand, says Mr. Hartigan, "let a bill be introduced in any legislature thought to be inimical to fraternal societies and the legislatures are deluged with letters, telegrams and resolutions, calling upon them to oppose the bill," because the members have been taught that the society's interests are theirs.

Therefore, to obtain the best results "the policyholders must be impressed with the idea that everything that affects the company adversely, affects him in like manner," for, "before the voter will take his interest in the affairs of the company he must be convinced that it is his company."

Why They Failed.

Mr. Hartigan believes that the greatest accomplishment in the line of uniformity was the enactment in more than twenty States of the laws known as the "Committee of Fifteen Bills." The failure of the commissioners to accomplish all they desired he sums up as follows:

Attempting too much.

Lack of agreement between company representatives and supervising officials and consequent lack of cooperation.

Nature of legislatures.

Lack of interest and technical knowledge on the part of the policyholders.

In general, it would seem that the first efforts of the insurance commissioners were too ambitious; that if, instead of trying to secure the adoption of a uniform code, they had contented themselves with taking up one subject at a time, that one purpose could have been accomplished. Again, laws require the test of time and use to prove their efficiency, and correcting the errors in a single law, or laws covering one subject, is a much less serious matter than revising an entire code.

Another reason has been the inability of departments and companies to agree on what was desirable, and the consequent opposition of one or the other. This lack of agreement is not surprising when we consider that the companies cannot always agree among themselves.

No law can be enacted, no existing law can be amended, without causing inconvenience to some one. These petty annoyances must not be considered, and if the officials representing the departments and the companies will come together with the one purpose of framing the law for the best interests of all, such law can be framed. It is said that every law is a compromise. There is less reason for compromise here, except on minor points, than in any other case, as the interests of the companies and the interests of the policyholders are identical.

Favors Monthly Premiums.

Irrespective of the past unsuccessful attempts of old line companies to collect premiums on a monthly basis, the commissioner sees a demand for the same. He argues:

In its final analysis insurance is protection, and it must eventually meet the demands of every class and grade of citizen and furnish to each individual the particular thing that he desires in insurance.

Another line of potential development is the collection of premiums on a more flexible basis. Monthly payment of premiums has been popularized by the fraternal societies, and monthly installment purchases are profitable and practical in many lines of business. The urgent need of the salaried man of the not over-provident class calls for consideration.

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

**THE PENN MUTUAL
LIFE INSURANCE COMPANY
OF PHILADELPHIA**

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

THURSDAY.**President Taft Speaks.**

The real event of the entire session centered in the address to-day of President Taft, and his utterances were characteristically clear-cut, sharp and definite. He left absolutely no doubt in the minds of his hearers that Federal control of insurance under existing constitutional powers was a settled issue in the negative for all time to come, at the same time expressing regret that the Supreme Court, in its wisdom, found it necessary to so decide.

The President pledged himself most unreservedly to a policy of uniform State laws as the next best and only available substitute. There was no chance for the slightest possible doubt as to his earnestness and fixedness of purpose on that score.

At the same time he pointed out in no uncertain words that there was a long, hard road ahead before the goal of uniform insurance legislation could be achieved, but bravely faced things as they are.

Again That "Model Code."

The President expressed the view that, following his intention to aid in every possible way, the adoption of a standard law of supervision of insurance for the District of Columbia, which would automatically operate as a model code for the States. Such a code was ordered prepared by President Roosevelt some three years ago, but Congress failed to make an appropriation for the work, and it has lagged, undoubtedly to final advantage, because the week of Washington conventions has concentrated thought and energy on the subject that cannot but result in infinitely better results.

Many of the strongest advocates who have labored long and diligently for Federal control will now undoubtedly turn their attention to bringing about the uniformity in the States.

The Morning Session.

At to-day's morning session George E. Ide, president of the Home Life Insurance Company and chairman of the Life Extension Committee, presented that report. He was followed by Walter Wyman, surgeon general of the Public Health and Marine Hospital Service of the United States who read a very interesting paper on the "Work of the Federal Government in the Matter of Health Conservation and What May Be Done to Supplement It."

The addresses of Drs. Rosenau and Dwight follow in order:

The State's Obligation.

"Preventive Medicine" is the watchword of the hour," said W. J. Rosenau, M.D., of Harvard, who has

charge of the organization of a public health bureau. He does not ask for a marching column of men in uniforms with microscopes and disinfectants, but calls for the enrollment of the services of all good citizens. He believes that since the Government now protects us from cholera, leprosy, yellow fever and other exotic plagues, that it will eventually be required to protect citizens against such preventable diseases as tuberculosis, pneumonia, typhoid fever, etc. In other words, just as the State holds employers liable for preventable accidents, those responsible should be held and prosecuted by law for not protecting the employee against infectious diseases. He cites the preventive measures adopted in Cuba, the Isthmus of Panama and the Philippines as triumphs applauded the world over. He believes it to be the duty, not only as citizens, but as trustees of large estates, and as the leader of responsible groups of men, of the presidents of the life insurance companies of this country to join the Public Health Bureau.

Needs The Help Of Every One.

Dr. Rosenau closes with the following strong appeal:

The fight is not a doctors' fight alone: that is why we need the help of a reserve force. No public health organization, whether fostered by all the power of the Federal Government, or all the resources of the individual States, could accomplish the best results without the sympathy of a public health militia. We need the help of every one. It is something for the preacher and the teacher. Organizations like life insurance companies with their legions of doctors, armies of agents, and hosts of patrons, could lend an effective and useful hand in this worthy warfare against disease. The life insurance officials, not only as organizations, but as individual citizens, could and should help in this campaign of education, and ought to foster fruitful and useful legislation of a public health character. In this way the influence of labor unions, railroads, corporations, trusts, philanthropic societies, as well as life insurance companies, would form a public health militia which would be invincible. Such a movement would be an irresistible force for good, and would result in saving many lives and preventing much sickness.

Expenditure Of Large Sums Unnecessary.

Edwin W. Dwight, medical director of the New England Mutual Life Insurance Company, followed Dr. Rosenau, and called attention to the great assistance the life insurance companies could lend to this most worthy cause. He said that "the life insurance companies are able to put into the field at almost an instant's notice a body of 100,000 men, thoroughly trained, and all of whom have at least one direct in-

terest in common—their work for life insurance, and indirectly through that interest, another—that is, public health." He also called attention to the fact that if these powers were to be utilized it was not to be through the expenditure of large sums of money, for, as he says, "the policyholders' money is not to be expended except for the direct benefit of the policyholder," even if the officers of the life companies had the will, the law would not allow it. "Fortunately," said he: "The expenditure of money is unnecessary. It is perfectly possible to make all of this material available and to furnish a properly controlled vehicle for its transmission to your forces in the field, and through them to the people in every portion of our country without an expenditure of one dollar of a policyholder's money."

An Absolute Necessity.

Dr. Dwight made a strong plea that the Government lend its full service to this just cause and showed conclusively the absolute necessity for the "National Health Bureau," as recommended by President Taft in his recent message to Congress, for, as he said in referring to the assistance that the life companies can give:

Even the best of forces is of little value if it be not properly officered, furnished with proper weapons and suitable ammunition. A hundred thousand chosen men, even if so carefully selected as ours, will accomplish little or nothing if they are working out of harmony; each man directed only by his own impressions and armed according to chance and individual opportunity.

One hundred leading Illinois agents of the Illinois Life attended the "fifty million" convention and banquet in the Hotel La Salle, Chicago. Among the guests of honor were Fred W. Potter, Insurance Superintendent of Illinois; O. B. Ryon, special attorney for the Illinois Insurance Department, and C. J. Doyle, attorney for the Illinois Insurance Department.

The Star of Success

shines over the fields in which our agents work.

Why? Popular company, policies that cover public needs, low net cost, literature that prospects read.

Now writing the largest business in our history.

LATE DEVELOPMENTS IN THE "QUEER DEAL."

On Tuesday last, by order of Justice Andrews of the Supreme Court, on application of the Attorney General, acting for the Insurance Department, Arthur F. Saxton was placed in possession of the assets of the People's Mutual Life Association and League.

Just what the insurance department intends to do with the association is a question. The court holds that "there may be various reasons why its continuance in business would be hazardous." One thing certain, however, is that the Insurance Department will bend every effort to recover \$150,000 of the company's assets that were placed on deposit in a bank in Toronto, just previous to the purchasing of the votes of the five directors for \$100,000, which sum was disbursed by Horace White at the direction of John Tevis.

Public Prosecutor Called In.

Action to recover the above-mentioned sum was begun by Attorney General O'Malley on Monday last. No statement has yet been made by Superintendent Hotchkiss concerning criminal prosecution.

John Tevis and W. R. Travers, manager of the Farmers' Bank of Toronto, Ont., were summoned by the District Attorney of Onondaga County and appeared before the Grand Jury there on Monday afternoon.

A peculiar coincidence in this case is that George H. Bond, the District Attorney, before taking that office was a law partner of Lieutenant-Governor White. So far Mr. White has not been asked to appear and perhaps will not be. It all depends upon circumstances.

Saturday's Developments.

The disclosure that Lieutenant Governor Horace White acted as official "bag-holder," in which capacity indirectly he paid himself \$20,000 out of the fund of \$150,000 raised for the purpose of purchasing the votes of five directors of a fraternal society, brought forth denials from Mr. White and his friends that the twenty thousand was for services rendered in the questionable deal. In fact, the interviews tended to give the impression that Tim Woodruff's representative had been duped.

Was He Duped?

It was admitted that White put up collateral to cover the loan that made the negotiations possible. Just how badly the Lieutenant Governor was duped will probably never be known. It is hard to say where the misleading commenced and where it ends, for, as the following statement

of the First National Bank of Syracuse on the 15th inst. proves, Horace White was not the only victim:

A special meeting of the board of directors of the First National Bank of Syracuse was held at the office of the bank at 11:30 A. M. on Saturday, January 1, 1910.

At this meeting the Hon. Horace White presented his resignation as a director of the First National Bank of Syracuse and the same was duly accepted by the board of directors.

The board of directors passed the following resolution:

"Whereas, On December 21, 1909, upon the direction of the president of the First National Bank of Syracuse, N. Y., the sum of \$150,000 was passed to the credit of Horace White, trustee, one of the directors, and by him used in connection with certain transactions of the People's Mutual Life Insurance Association & League of Syracuse, N. Y., said White having stated to the president that the transactions were legal and proper, and that the bank would be called upon to render valuable services in connection therewith.

"Now, upon consideration of the matter by the board of directors of this bank, it is hereby:

"Resolved, That the above action be, and is hereby disapproved. It is further

"Resolved, That the sum of \$5,000 received by this bank in connection therewith be held subject to the order of the person, corporation or association adjudged legally entitled thereto."

DOUBLE THE DIVIDENDS.

The preliminary report of the Northwestern National Life Insurance Company of Minneapolis, Minn., gives the company total admitted assets of \$5,941,520 and a surplus of \$253,000. The dividends paid to policyholders in 1909 are more than double those of 1908. All told nearly \$1,000,000 was paid to policyholders and beneficiaries last year. The steady and uninterrupted progress of the company under the able guidance of President Thompson and Vice-President William J. Graham and their associates is indeed gratifying and must be galling to the old management.

FRY LANDS HIS COMPANY.

R. F. Fry, of Milwaukee, Wis., has apparently landed his new life insurance company. Last week articles of incorporation were filed in Madison. Inasmuch as the Wisconsin law requires 50 per cent. of a corporation's stock issue to be subscribed and 20 per cent. paid in, it is to be assumed that over half a million of the total capital of \$1,000,000 has already been paid in.

Mr. Fry is president and general manager of the temporary organization, John E. Reilly is secretary, and M. A. Graetinger, cashier of the Merchants and Manufacturers' Bank, is treasurer. The company virtually has the backing of four of the largest banks of Milwaukee by the interest taken in the company by the officers and directors of these institutions.

MORE TROUBLE.

Senator Beaty, of Bowling Green, Ohio, announces that he will introduce in the coming session of the Legislature of that State a bill regulating insurance rates copied closely after the Kansas law, with anti-discrimination and anti-rebate features, and requiring the filing of schedules and permitting the Insurance Superintendent to require the filing of higher or lower rates when he regards them as necessary.

SUPERINTENDENT APPROVES.

Approval has been given by Superintendent of Insurance Hotchkiss of the application of the Metropolitan Life Insurance Company to purchase 250 acres of land in Westchester County, for the purpose of erecting a sanatorium for the treatment of tuberculosis among its employes. As announced in a previous issue of "The Chronicle," the Appellate Division of the Supreme Court ruled that section 20 of the insurance laws, which restricts the purchase of real estate by life insurance companies, does not in any way conflict with the worthy purpose of the Metropolitan.

STATE HAS "SINNED AGAINST NATURE."

President Kingsley, of New York Life, estimates that the company could have easily written at least \$300,000,000 of new business if it were not for the restriction of section 96. He believes that the State of New York has "sinned against nature" in enacting this statute, intending deliberately to stop the naturally sound and healthy growth of that company.

In his report which was submitted on January 12, to the board of directors, President Kingsley said that no fair-minded man, having reviewed the annual statement, could avoid the conclusion that energy, capacity and fidelity in administration "were not born yesterday in the New York Life."

"Any claim," he continued, "which we as trustees and officers may have to approval by the 750,000 families protected by this institution is made stronger by the willing admission, which we all make that our predecessors toiled both mightily and wisely."

An examination of the company's annual statement, which appears on the inside of the front cover of this week's issue, shows that irrespective of the handicap, as mentioned above, the company has made wonderful strides this past year. An analysis of this year's report in comparison with the exhibit of a year ago, shows the following:

Income.

1908	\$102,435,833
1909	111,025,343

Payments to Policyholders.

1908	\$49,191,258
1909	51,990,221

Assets (Dec. 31).

1908	\$557,286,671
1909	599,708,286

Insurance in Force (Dec. 31).

1908	\$1,993,558,601
1909	2,002,800,227

INCREASES CAPITAL STOCK.

The officers of the Southwestern Life Insurance Company, of Dallas, Tex., announce that the capital stock of that company has been increased to \$250,000. It is gratifying to all underwriters to know that no commission has ever been paid by this company for the sale of its stock and in this latest issue, as in previous issues, every dollar paid by original purchasers of stock has gone directly into the treasury of the company.

The company's admitted assets on December 31, 1909, exceeded one million dollars, and the legal reserve on all outstanding policy contracts is deposited in approved securities under the new registration and deposit law of Texas.

NOTHING BUT HIGH-CLASS BUSINESS FOR THE SECURITY.

The showing made by the Security Mutual Life Insurance Company of Binghamton, N. Y., is indeed most gratifying to the policyholders as well as the management.

During the past six months the company has greatly strengthened its agency force. As a result the new business submitted during the month of December largely exceeded that of any previous month, the amount submitted exceeding \$3,000,000.

The business for the new year is starting out magnificently, the amount approved so far this month being double that of the entire month of January, 1909. From present indications they confidently anticipate good gains each succeeding month over the corresponding months of last year.

President Jenkins reports that the total amount of assets on January 1, is \$5,444,047, with a surplus of \$544,000. The company has been able to materially increase the dividends for 1910 and still keep within the limits of conservatism. In a letter to the field representatives President Jenkins says:

In 1908 the new business paid for was \$5,489,555. In 1909 it was \$8,049,811, and I ask you to remember that this represents, every dollar of it, new business, all freshly selected, and does not include any business (so-called) reinsured from other moribund concerns.

THE A. O. U. W.

Following the report of the examination of the Ancient Order of United Workmen, Superintendent Hotchkiss has decided to permit the New York jurisdiction, although sadly in arrears in death payments, to continue in business on the ground that if the supreme lodge, which has brought suit against certain jurisdictions, received a verdict in its favor, the stronger of the different State bodies will be compelled to render aid to the New York jurisdiction.

A RECORD OF VALUABLE SERVICE.

As announced in last week's issue of "The Chronicle," a complete board of the old directors and officers of the Fidelity Mutual Life was unanimously re-elected.

This marks the thirty-second time that Mr. Fouse has been chosen to the presidency of the company, he being now, in point of service, one of the ranking life insurance presidents of the country.

The company's detailed annual report will not be ready for distribution until about February 1. A synopsis of the report shows substantial gains in all lines. For instance, there was a gain of 13.6 per cent. in ledger assets, this item now amounting approximately to \$20,000,000. The company issued in the year new business amounting to \$20,555,085; insurance in force December 21 amounting to \$124,666,815, or a net gain of approximately \$4,000,000.

A prominent visitor yesterday: "The Chronicle" is of value to us and we read it because it is so different from any other insurance journal. It treats things from other than the news standpoint. We can get the news from the daily papers."

Washington's Most Notable Convention.

The National Capitol is having the most notable convention, or, rather, week of conventions, in its history, and probably in the world's history, all under the auspices of the National Civic Federation, of which former president of Columbia University, and ex-Mayor of New York, Seth Low, is president.

The formal opening occurred on Monday with Judge Alton B. Parker presiding, and with the President of the United States as the sponsor.

Among the organizations represented were the New York Chamber of Commerce, by David R. Francis, George F. Seward, George B. Cortel-you, Anton A. Raven, James G. Cannon and Sereno S. Pratt.

The Board of Trade, by W. McCarroll and ex-Judge A. J. Dittenhoefer, Lindsay Russell, Alonzo E. Lee and Ludwig Nissen.

The Merchants' Association, by Edward D. Page, George E. Armstrong, Marcus M. Marks, E. A. Dillenbeck, S. C. Mead and A. I. Elkins.

American Bankers' Association, by Lewis E. Pierson.

American Society of Mechanical Engineers.

National Association of Automobile Manufacturers, by Charles P. T. Terry.

American Institute of Electrical Engineers, by Lewis B. Stillwell.

National Association of Clothiers.

National Wholesale Drug Association, by W. Jay Schieffelin.

National Wholesale Grocers' Association, by W. C. Breed.

Association of Life Insurance Presidents, by John F. Dryden and Robert L. Cox.

American Association of Public Accountants, by J. E. Sterrett.

National Board of Fire Underwriters, by J. Montgomery Hare.

National Association of Credit Men, by Charles E. Meek, secretary.

National Wholesale Lumber Dealers' Association, by E. F. Terry.

The American Street & Interurban Railway Association, by James H. McGraw.

The American Federation of Labor, the National Grange, the Farmers' National Congress and the National Association of State Boards of Arbitration.

New York State Delegates.

The delegates nominated by Governor Hughes to represent New York State were Senator Elihu Root, Andrew Carnegie, Alton B. Parker, Seth Low, W. C. Brown, John Mitchell, James Speyer, Frank A. Vanderlip,

Isaac N. Seligman, George W. Perkins, President Nicholas Murray Butler, Henry Phipps, V. Everet Macy, Charles A. Moore, Otto M. Eidlitz, Timothy Healy, Henry R. Seager, J. M. Wainwright, Howard R. Bayne, J. W. Jenks, Jesse F. Phillips and W. R. Willcox.

Mr. Low introduced President Taft in a brief speech in which he gave the President all honors for the inspiration that caused him to suggest the "week of conventions" during the sessions of the National Civic Federation, the "House of Governors," the Association of Life Insurance Presidents and what is in composite effect, representatives of every important uplift and "for progress" organization in the Nation.

"This conference has been called to give an impulse to the movement for uniform legislation by the States as to matters upon which such legislation is desirable," said President Low. "The people of the whole Union have been growing together in their business relations, and in all the relations of life, without regard either to State lines or to constitutional theories. The result is that of late years the conviction has been steadily growing that uniform legislation by the States on many subjects is becoming, if it has not already become, essential to the welfare of the people of each State and of every State.

"Uniform legislation does not mean in every instance that every State should act on all subjects. In many cases, action by groups of States will be as effective as action by all. If uniform action by the States, in groups or as a whole, can become habitual as to matters affecting the common life of the people in whatever State they live, there is no reason why there may not be added to all the other advantages of our Federal system this new element of strength, that we may enjoy the advantage of legislation in common such as the common interest may demand, without forfeiting that individuality of legislation as to interests purely local which the Federal system aims to preserve."

The President's Opening Talk.

President Taft made an address that will be one of the most remarkable and epoch marking precedents ever established by any President of the United States. He declared that there were many latent powers and potentialities vested in the Federal Government that had not yet been set in motion or even considered. He ex-

pressed the view that the cry against the over-centralization of the Government would be hushed if the States worked in harmony with each other in their law-making, otherwise, as Senator Root predicted two years ago, Congress will be urged to enact for the whole country the laws which conditions demand and State statutes fail to supply.

In discussing the movement started by the Civic Federation for uniformity in State laws, President Taft said that it was the outgrowth of a demand on the part of good citizens to bring about better conditions in the social fabric. His definition of a constitutional lawyer as "a gentleman who has gone out of the practice of law and has gone into politics" called forth laughter and applause and cries of "Good, good."

The President said that there should be uniformity in judicial procedure. He declared with emphasis that if anything in the system deserved attack, it was the delay that could be secured by the wealthy under judicial proceedings, and he advocated changes in the form of Federal court proceedings which could be taken as an example by the States. He wanted court procedure simplified along the lines of English practice both in equity and criminal law.

President Dryden's Address.

In his address before the National Conference on Uniform Laws, John F. Dryden, president of the Prudential Insurance Company, very pointedly showed that the conflict and dissimilarity of State laws has resulted in a "condition properly described as interstate warfare unworthy of the civilization of the present day."

The brief history of the unproductive attempts toward attaining some real uniformity in the laws of the different States which he reviewed most interestingly is in part as follows:

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

Men of Character and Ability are invited to apply.

**Conn. Mutual Life Ins. Co.,
Hartford, Conn.**

Please mention this paper.

Need of Uniformity in Departmental Practice.

Conditions like these must naturally suggest to earnest minds a deliberate attempt towards harmony and uniformity, and a number of such efforts have been made in the past, but all have practically been complete failures. Clearly distinguishing between the narrow domain of the law itself and of what falls within the wide sphere of departmental practice, it is in the latter that some excellent results have been achieved in the direction of uniformity, through the earnest and unceasing efforts of Insurance Commissioners annually in convention assembled for many years. Organized in 1871, for the purpose of establishing uniformity in law and departmental practice, it was not until 1894 that the first success was achieved in the adoption of a uniform blank for the use of the majority of States. The blank has been changed and modified from year to year, in conformity to changes in statutory requirements, and the complexity of the situation, even at the present time, is clearly brought out in the statement of the Superintendent of Insurance for the District of Columbia, that in 1907 some 569 changes were made in the annual blank. In 1908 some 197 additional changes were required to make the same conform to the recommendations of the committee in charge of the uniform blank of the National Convention of Insurance Commissioners. As the blank now stands, it constitutes a volume of information in detail regarding a single business enterprise which is without a parallel in the whole field of government or commercial accounting. No arbitrary or paternal government in the world demands of its insurance corporations so full and comprehensive an annual return as is required to be made at the present time by the life insurance companies of America. It is, therefore, of great value that at least some degree of uniformity in the annual reports has been attained and the special committee in charge of this admirable work for a number of years is entitled to the grateful appreciation of the life insurance companies and their policyholders.

First Attempt at Uniform Codification (1871).

In marked contrast to the success which has been achieved in the adoption of a uniform blank by the majority of States stands the failure of efforts to bring about uniformity in the statutory requirements governing the essentials of the business of insurance. In chronological order, the first important attempt to bring about uniformity of insurance law was made in 1871, when the first annual convention of Insurance Commissioners had a model insurance code prepared for general adoption, at least in its essential provisions, by the different States. The law had many features of intrinsic value, but it was not the result of extended deliberation and painstaking attention to matters of detail, which, by common consent, should govern in the codification of every branch of the law, and particularly in that of insurance. Having failed to make the proposed model insurance law conform to this re-

quirement, the attempt naturally failed, and not a single State adopted the model law recommended for the general use of the different States.

Second Attempt at Uniform Codification (1895).

Every year the subject of uniformity of law has received the consideration of the Insurance Commissioners' Convention, but it was not until 1895 that the second important attempt of this kind was made, when four States had under consideration a revision of their insurance laws and their proposed codification. It was suggested that the new laws of the four States should be made uniform and that one standard model code should be adopted, the provisions of which should ultimately become general throughout the United States. The effort, for reasons which have no bearing upon the present discussion, proved a complete failure.

Third Attempt at Uniform Codification (1906).

The third important attempt was made in 1906, when the President of the United States, acting upon the suggestion of the late Governor Johnson, of Minnesota, called a National Insurance Convention of Governors, Attorneys General and Insurance Commissioners, to consider the whole subject of uniformity of insurance legislation throughout the States and Territories. As the first step towards this purpose, President Roosevelt suggested the enactment by the Congress of the United States of a proposed insurance code for the District of Columbia, which might serve as a model for the different States. The proposed model did not, however, commend itself to the members of the convention, and no action was taken upon the suggestion. The convention, itself, resulted in nothing more than the adoption of a few resolutions concerning particular matters demanding general consideration and the appointment of a committee of fifteen to report upon uniform bills applicable to the needs of the different States.

Recommendations of the Committee of Fifteen.

The Committee of Fifteen held four sessions, and, finally, though not unanimously, agreed upon seventeen supposed-to-be model bills, designed to bring about uniformity in the es-

entials of insurance legislation throughout the United States. The bills as reported were not adopted in their entirety by a single State, and only certain provisions were adopted by a number of States. Of some bills only particular sections were adopted, while most of the bills, upon legislative deliberation, disclosed a wide degree of diversity of qualified opinion, which made their enactment seem either inexpedient or otherwise inadvisable.

Failure of the Work of the Committee of Fifteen.

The final results of the work of the Committee of Fifteen are summed up as follows by E. E. Rhodes, actu-

PROVIDENT

LIFE AND TRUST COMPANY
OF PHILADELPHIA

Insurance in Force, \$201,185,435.00
(Paid for Basis)

Assets \$67,324,334.35
(Market Value, Dec. 31, 1908)

Contingency Reserve . \$8,819,979.14

The NEW POLICIES of the Provident are unsurpassed for conciseness and simplicity of form and for adaptability and liberality in all essentials.

The Premium rates of the Provident are exceedingly low and are still further reduced by large annual dividends.

THE FIDELITY & CASUALTY COMPANY

97 TO 103 CEDAR ST., NEW YORK CITY.

ASSETS - \$8,649,885.66
Cap. & Surplus \$3,011,834.00

to Jan. 1, 1909,

This Company grants Insurances as follows:
Bonds of Suretyship for Persons in Positions of Trust, Fidelity Bonds, Burglary, Plate Glass, Steam Boiler, Fly Wheel, Employers, Public, Teams, Workmen's Collective, Elevator and General Liability; Personal Accident, Health and Physicians' Liability.

OFFICERS:

GEORGE F. SEWARD, President.

Robert J. Hillas, V.-P. & Sec'y. Henry Crossley, Ass't Sec'y.
Frank E. Law, 2d Ass't Sec'y. George W. Allen, 3d Ass't Sec'y.

ary of the Mutual Benefit Life Insurance Company, who actively participated in their proceedings: "The much-heralded conference of Governors, Attorneys General and Insurance Commissioners, which was held ostensibly to secure uniform legislation for the benefit of policyholders, met with failure. Instead of uniformity, there is confusion, and instead of legislation which will benefit policyholders there is a mass of laws which are not understood by their sponsors and an arbitrary enforcement of which must result in great harm."

Fourth Attempt at Uniform Codification (1906).

Coincident with the effort to secure uniform life insurance legislation, through the work of the Committee of Fifteen, a fourth and more ambitious attempt was made in 1906, by the introduction of a model code of insurance for the District of Columbia, by Butler Ames, a member of Congress for the State of Massachusetts. It, however, required no very extended consideration of the details of the bill by men having a practical knowledge of the business of insurance to prove its inherent defects and shortcomings, certain to defeat the end which it was proposed to attain. The bill was erroneously entitled, "A Bill to Provide Federal Regulation of Insurance," when the only object was the enactment of a model insurance law for the District of Columbia.

Fifth Attempt at Uniform Codification (1906).

The wide degree of divergence in qualified opinion as to what should constitute a model code of insurance for the District of Columbia is made evident by the publication, also in 1906, of a proposed model law, prepared by the National Board of Casualty Underwriters. This code was essentially different in its principal provisions from the various Ames bills, but only slight public consideration was given to the proposal, nor does it appear that the same was ever seriously considered by Congress. This fifth attempt on the part of a deliberate body to bring about uniformity in the law of insurance was also, therefore, a complete failure.

President Dryden can see no other alternative in view of the imperative need of expert codification, than for the life insurance companies to employ the requisite skill and trained experience to agree upon the essentials, if the Government will not bear the expense. He believes "the preparation of a really model code for the District of Columbia would aid materially the cause of uniform laws and legislation, and it is manifestly the duty of Congress to provide liberally for the necessary expense and the employment of the required skill, so that the code which may finally be agreed upon shall be a model one in fact and represent the best judgment of the times. If, however, Congress cannot be induced to authorize this work,

then it seems to me that it will be the duty of all American insurance companies to undertake this work and to bear their pro rata share of the expense of having such a code prepared in their own behalf.

Either Uniform Law or Federal Supervision.

"The task at best, will be an arduous one and it will be the better part of wisdom to make haste slowly. Widely conflicting views and opinions will require to be harmonized and upon some matters irreconcilable differences of opinion will make a departure from standard requirements seem advisable. I am firmly convinced that a uniform code governing the essentials both of the public and the private law on the subject of insurance can be framed and the past experience of every life insurance company transacting business in the different States makes it desirable and proper that such a code should be prepared. Failing in this, the only ultimate alternative will be the supervision and control of the interstate business of American insurance companies by the Federal Government."

Employers Liability.

The insurance feature of Tuesday's session centered in the subject of compensation to injured employes, or, as technically termed, employers' liability. The discussion was entered into by the most prominent leaders in America, representing both capital and labor, and was remarkable for the unanimity of conclusions.

President Gompers of the American Federation of Labor declared the European mine owner had a better conception of the care of his employes and the operation of his plant than the American mine owner. He laid down a hard and fast rule that the industry in which a man was employed should bear the burden of injuries sustained in the course of his work, as part of the cost of production, simply as a matter of justice as well as an economic principle by which poverty and alms houses can be abolished.

John Mitchell, vice-president of the National Civic Federation, followed in a similar strain.

"The workingmen of the country," said Mr. Mitchell, "are now asking that the laws be made uniform, for they are uniformly bad. What we are asking for is that you enact the laws now in force in Europe relative to compensation for accident.

"We want the money due to the injured man paid at the time of his accident and not after he is dead. We are killing more men in America in the mines than in any country in the

world, and reports show that the fatalities are increasing every year."

John Hays Hammond thought the number of fatal accidents in mines could be reduced more than 35 per cent. by raising the standards of safety. He said that there were mined in the United States in 1908 about five hundred million tons of coal at a cost of 2,450 human lives.

Belmont Endorses It.

August Belmont of New York declared that "labor will be attracted to the States affording it the fairest and safest protection, and the employer will hail this, too, as an advantage to himself." He advocated the passage by the States of laws compelling corporations to make adequate and definite provisions for the health, safety, and ultimate care of their employes, when injured or incapacitated. In his opinion this was the greatest question of the day.

"In it lies not only the solution of a great and unjust burden on labor," he said, "but an escape from the dangers of overburdening our National Government with duties it could never perform."

Professor Samuel McCune Lindsay, of Columbia University, spoke on industrial legislation as related to inter-

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS, takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy incontestable, and no restrictions upon residence, travel and occupation, after the first policy year, except as to military or naval service in time of war.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

For further information apply to
JOHN H. ROBINSON, General Agent
For New York and New Jersey,
Postal Building,
253 Broadway, NEW YORK.

state competition and the obvious necessity of uniformity. The divorce industry of Nevada and South Dakota was referred to as an illustration of what lengths of immorality a state will go to in the competitive race for dirty money. The competitive corporation laws of the "traitor" from their initiation by New Jersey, West Virginia, Delaware, Maine, Virginia and cactus covered Arizona clear down the list to the District of Columbia itself were reviewed, discussed and cussed. And this was probably the weightiest of all the arguments in favor of uniformity.

The Auto Has an Inning.

Hon. Chas. T. Terry, general counsel of the American Automobile Association, advocated uniform liability, speed and license laws for the rapidly developing industry already handicapped by lack of comprehensive legislation and practices.

The "Third" House of Congress.

What promises to afford American insurance interests in general, and various other commercial and financial developments in particular, relief from the present restrictive and leaden weighted heels impelled upon them by the confusing and utterly incomprehensible patchwork of forty-eight State regulations, is in the possible results of the third annual session of the Governors of the States now in session at the National Capitol.

Happily and conveniently termed the "Third House of Congress," its powers are inestimable. Freed of all conventional political restraint, this meeting becomes in reality a people's forum where absolute freedom of expression can be had without the inevitable "come back" that results from official political utterances. Here is afforded an opportunity for discussion and heart-to-heart talks, academic or otherwise, and the conception of the idea is the work of President Roosevelt crystalized in his calling the first session at the White House, and is the greatest of many great accomplishments of his remarkable administration.

The third annual session of the "House of Governors" opened on Tuesday with an address by President Taft and Governor Hughes, of New York.

President Taft's Speech.

President Taft said in part:

When you were here before Mr. Roosevelt extended to you the hospitality of the White House, and meetings were held here, but those meetings were so fully his, in the sense of being called by him, that it seemed entirely appropriate; whereas now, I hope, this is a movement among the

Governors to have some sort of a permanent arrangement that shall bring them here without suggestion from any one but the Governors themselves.

Importance of Movement.

You are here for the purpose of considering those subjects for laws in respect to which the legislation of the States ought to be uniform, and to take that course of making up for what some people point out as defects of the Federal Constitution. I regard this movement as of the utmost importance. The Federal Constitution has stood the test of more than 100 years in supplying the powers that have been needed to make the central government as strong as it ought to be, and with this movement toward uniform legislation and agreement between the States I do not see why the Constitution may not serve our purpose always. I speak to you as gentlemen who can influence legislation in the States, and who are in a sense responsible for it.

English System Better.

I have thought that the English system presents in certain respects a better system than ours, in view of inevitable responsibility of the executive for legislation. It seems to me, without ever hoping or suggesting that there can be any change in our system (for its rigidity has advantages), that still that system would present a good many opportunities that you and I would like to seize upon to argue out questions to the Legislature and to save them time by giving them considerable information on subjects in regard to which they are not advised. It shortens, I am sure, the course of legislation; but we haven't got that system; we haven't it in any State, and we are not going to have it, so there is no need of mourning over the fact that we cannot have it.

Governor Hughes' Speech.

Governor Hughes said in part:

A conference of Governors can be expected to accomplish much more

than conferences of legislative committees or of appointed commissioners. Accord between executives upon questions which they have carefully considered together cannot fail to be of enormous influence.

The scope of these conferences may be deemed to embrace at least three groups of questions: The first relates to uniform laws; the second relates to matters of State comity where, if absolute uniformity may not be expected, causes of friction may be avoided and the general welfare may be promoted by accommodating action; the third relates to matters which, though of local concern, can be better treated in the light of the experience of other States.

It will not be possible for Governors in conference to undertake the drafting of uniform laws, but their united consideration of their importance and of proposed statutes drafted by commissioners of their appointment, will bring these matters into deserved prominence and supply for the progress of uniform legislation a much-needed impetus.

Jealousies Now Forgotten.

The ancient jealousies that have divided us are now forgotten. The sentiment of national unity has overcome divisive prejudices and the people of this land are animated by a

common patriotic impulse and intense devotion to the common interest, against which sectionalism will direct its attacks in vain. This sentiment of national unity, which is the outgrowth of an increasing intimacy of relation and facility of communication, should enable us the more easily to maintain and perfect the essential instrumentalities of State Government, upon which, as well as upon our National activities the welfare of the people depends.

For Uniform Laws.

President Seth Low, who was accompanied to the conference by a committee of nine from the National Civic Federation Co-convention, was introduced. Mr. Low said he came to read the uniform laws act, drafted by the federation, which sanctioned the adoption of uniform laws on divorce, banking and insurance, taxes, negotiable paper, and "white slave" traffic.

Interesting Insurance Close.

At the closing session yesterday resolutions were adopted recommending to the Governors the adoption of uniform laws for the protection of children employed in industries; favoring a uniform insurance code for adoption by the several States, and uniform legislation on the gathering and preservation of vital statistics.

The conference further adopted a resolution recommending to the States that workmen's compensation acts be uniformly substituted for the present system of employers' liability for injuries received in and arising out of the course of employment.

The conference authorized the appointment of a committee of fifteen on reform in legal procedure for the purpose of co-operating with the committee of the American Bar Association to suggest remedies and formulate proposed laws to prevent unnecessary delay in litigation.

New York City Is Best.

"Never again," chorused the Governors of thirty-one States, "will we choose the National Capital as our meeting place."

This is the dictum of the special committee, consisting of Governors Hadley, of Missouri; Hughes, of New York; Ansel, of South Carolina; Comer, of Alabama, and Harmon, of Ohio, selected to choose the next meeting place.

In Washington the rights of the State, the dignity of the gubernatorial office and the prominence of the individual are dwarfed by the dominating Federal atmosphere. Hereafter the Governors will select one of the State capitol for their meeting place.

The meetings will be held annually and in a different city each year. It is likely that Springfield, Ill., Indianapolis, Ind., or Columbus, O., will be selected for the next session if New York is not chosen. There are many who favor it and curiously enough those most remote in point of time and distance. Everybody likes to have business here.

ONCE AGAIN.

It is next to impossible to hold some men down, they simply must be heard and written about. The full text of the resolutions calling for an investigation of fire insurance companies in New York State and appropriations of \$25,000 and \$20,000 respectively, introduced by Assemblyman Hoey, is as follows:

Whereas, It appears from the recent investigation by the State Superintendent of Insurance of the Phenix Insurance Company and other fire insurance companies that gross abuses exist in the conduct and administration of fire insurance companies doing business in the State of New York and

"Whereas, Numerous complaints have been made that the interests of policyholders and stockholders are not properly safeguarded by existing laws, and that unreasonable charges are exacted for fire insurance, and unlawful agreements and pools exist in various localities of the State, particularly in the city of New York, in the nature of monopolies, and

"Whereas, His Excellency the Governor in his annual message recommends the revision of the laws relative to fire insurance companies and co-operative fire insurance companies, and

"Whereas, The inquisitorial powers of the Superintendent of Insurance are limited to the examination of the officers and agents of the companies and their books, with reference to their business, and with a view to their solvency, chiefly, it is expedient that as a basis for legislation for the operations of such fire insurance companies they should be investigated as fully and as promptly as may be;

"Resolved, If the Senate concur, that a joint committee be appointed, consisting of three members of the Senate and five members of the Assembly, which committee shall, after the adjournment of the Legislature, proceed to investigate and examine into the business and affairs of fire insurance companies doing business in the State of New York, with reference to the investments of said companies, the relations of the officers thereof to such investments, the relation of such companies to subsidiary corporations, the Government and control of said companies, the contractual relations of said companies to their policyholders, the cost of fire insurance, the expenses of said companies, and any other phases of the fire insurance business deemed by the committee to be proper, for the purpose of drafting and reporting to

the next session of the Legislature such a revision of the laws regulating and relating to fire insurance in this State as said committee may deem proper, and be it further

"Resolved, That the said committee be and it hereby is authorized and empowered to require and enforce the attendance of witnesses, and the productions of books and papers, to administer oaths, and to employ counsel, stenographers, clerks and such other employes as may be necessary for the purpose of the investigation. And a sum not exceeding \$20,000 is hereby appropriated out of any moneys in the treasury, not otherwise appropriated, for the purposes of said committee."

Others Busy Too.

Another publicity producer is the bill introduced by Assemblyman Bates, of New York, amending the insurance law by requiring fire insurance companies, within five days after notice of loss or damage by fire, to deliver to the insured proper duplicate blanks for making proofs of loss. The blanks must contain printed instructions as to the manner in which the proof of loss is to be made, and when the proofs are made in substantial compliance with such instructions they shall be sufficient prima facie proof of loss if returned to the insured within the time limited for making the proof.

Service of the proofs of loss may be made upon the insurer or his accredited agent or any person in or connected with the office of the agent. Failure to furnish such blanks is to be considered a waiver on the part of the insurer of his right to demand proofs of loss.

Two bills amending the insurance law were introduced in the Legislature to-day by Assemblyman O'Conner, of Brooklyn. One bill strikes out the prohibitions against unsecured loans by insurance companies to their agents, and also the provision prohibiting from doing business in this State foreign life insurance companies which fail to comply with the limitation of expenses fixed in New York laws. The other bill includes industrial insurance policies in the law governing standard provisions. Under the present law such policies are excluded where premiums are payable weekly.

A shake-up in the Fire Department of New York is expected to follow the investigation now being carried on by Fire Commissioner Waldo. The new commissioner is positive he can prevent a great deal of the waste and extravagance that now seems to be pre-eminent without impairing the efficiency of the service.

CHICAGO'S FIRE RATES.

At the annual meeting of the Chicago Board of Underwriters held last Thursday, A. F. Shaw made his usual motion that preferred rates be reduced in Cook county, which motion was, as usual, voted down by a good majority. While this motion and its defeat are part of the routine business of annual meetings, they are mentioned at this time as this may be the last opportunity of giving recognition of this time-honored custom. Some of those who have followed most closely the proceedings of the Illinois Fire Insurance Commission are of the opinion that that body will make recommendations which will result in a reduction of preferred rates in Cook county, whether the Chicago board favors such action or not. This, of course, would result in the pleasing custom before mentioned falling into disuse.

Another factor tending in the same direction is the demand of the Illinois Insurance Department for a classification of business into four classes, with premiums and losses on each. One class being dwelling and contents, the figures are likely to show something of the profit on this class. While the best underwriters think this information valueless as a basis for rate making, if an excessive profit on preferred business is shown, it will furnish ammunition for those who are waging war on present preferred rates, and that class includes some men of the highest standing in the fire insurance business.

Early Preferred Reduction Unlikely.

The chances are that the Chicago board will not reduce preferred rates until the pressure in that direction becomes strong. It would be too high praise to attribute inactivity in this direction to Mr. Glidden's able argument that there are so many more tenants in Chicago than in outside towns that preferred rates ought to be higher, notwithstanding paid fire departments, electric alarms, ample water supplies and paved streets which Chicago and many suburban towns have in a greater degree than many lower rated outside towns. Chicago agents are like other agents. They are not as a body inclined to volunteer rate reductions for which there is no marked demand by the assured. Nor do they desire to take action which might necessitate advances on some other classes in order to give companies a profit, when they know that such an advance would mean a vast amount of complaint and hard work.

RECOMMENDATIONS GOOD AND BAD.

Insurance Commissioner Henry, of Mississippi, says that Mississippi is practically the only Southern State without a deposit law of some kind for fire companies, and, therefore, he urges the coming Legislature to place such a statute on the books. He believes the "privilege tax on insurance agents" in his State is excessive and recommends a reduction of the same.

Among other recommendations he says:

Several amendments are needed to the present law providing for investigating incendiary fires and especially the sections relating to the preliminary examinations. These should be amended so as to give the commissioner the right to employ counsel, not only in the preliminary examination, but in the Circuit and Supreme Courts as well, when deemed necessary. Companies having done business in any given locality through a resident agent, and having business at risk there should be required to keep an agent in that locality until the expiration of the same, for the purpose of issuing vacancy permits, and attending to other necessary details connected with the business.

LAW GOES TO CINCINNATI.

It is announced that Charles G. Law, of Chicago, will retire soon as Illinois State agent of the Royal to become associated with Major James L. Foley in the management of Law's Insurance Agency at Cincinnati. Mr. Law is a son of John H. Law, of Law Brothers, Western managers of the Royal, who went to Chicago from Cincinnati. Law's Insurance Agency has been in existence in that city for over half a century.

The statement of December 31, 1909, of the Continental Fire Insurance Company, shows gross assets of over \$22,000,000, and a net surplus of \$13,000,000. Last year was one of the most successful and profitable years the company has ever had.

IN NEW ENGLAND

President Grover's Address to the Exchange.

J. W. Grover, the newly elected president of the New England Insurance Exchange, in assuming the duties of that position last Saturday, addressed the members as follows:

In assuming the position to which you have elected me, I first want to thank you for the honor conferred, and in saying this I say it in the fullest meaning of the word. There is nothing higher can come to a man, in the field.

No body of men can show more loyalty or inspire greater confidence than you gentlemen have, in the recent past, when put to the test, and I am proud to be one of you, and more proud to be elected your president.

But even having done so much for me, you are not yet through. I ask more; I want your help. We are all prone to mistake, and I am no exception. I shall make mistakes, and I ask you to look on the intent rather than the fact, and help me to make this year's administration the equal of any in the past.

To do this, I ask suggestion and advice from each and every one of you. Don't hesitate, but speak or write just what you think, and though we know it to be impossible to follow the suggestions of all, and that disappointments await some, yet the ideas of all will be considered, and each play its part in our final action.

Some twenty-six years ago a small body of men gathered together in a little room, not far from here, and formed this New England Insurance Exchange. Very few of those men are with us to-day; the great majority have passed on to higher duties here, or there, but they have left us the benefit of their knowledge and experience; their places have been filled and added to, until we have grown from the original score to nearly eight score. In each year there have been added problems more difficult to meet, but they have been met, and, as a rule, successfully.

No one man did or could accomplish this, nor could any hundred men working, each independent of the other; but what has enabled us to do this has been the loyalty already referred to, and the honor, honesty and confidence between ourselves. Let this feeling grow and develop; with it we can accomplish much, without it nothing!

The matter of minimum rates for lumber, which was on the calendar of the exchange for action, was, at the request of the executive committee, left in its hands for further consideration.

Voluntary Saving Advised.

The report of the Massachusetts Commission on old age pensions, annuities and insurance, was filed at the State House on Beacon Hill last Saturday. The commission, which was appointed in 1907, on the prompting of

former Representative Bernard Ferber, is composed of M. W. Alexander, J. T. Buckley, Mrs. M. E. Hodder, A. M. Huddell and W. G. Chase, reports unanimously against the enactment of any general pension legislation at the present time. A summary of the report says that the British scheme of non-contributory pensions is vigorously criticised and rejected by the commission. It is also held to be inadvisable to enact any measure of compulsory insurance.

The commission offers several detailed recommendations, the main purpose of which is to promote the development of agencies for voluntary saving and provision against old age. The compulsory teaching of thrift in the public schools is recommended for this purpose.

Urge Contribution Plan.

The savings bank insurance system is commended to the attention of employers and wage-earners, and also enabling legislation to authorize employers and employes to form pension associations, supported by joint contributions is recommended.

The most important recommendations relate to the establishment of pension systems for public employes, including employes of cities, towns, counties and the State.

Bills are offered for this purpose, the scheme proposed being based on the contributory principle, with co-operative control by the two parties.

The general court is also advised to create a permanent commission on old age insurance and pensions. Its principal duty would be to promote the establishment of retirement systems by municipalities, corporations and employers of labor throughout the State.

There is no minority report, but Commissioners Buckley and Huddell submit dissenting statements in respect to some of the findings on non-contributory pensions and compulsory insurance.

Royal Arcanum Loses.

A press dispatch from Syracuse, N. Y., under date of the 12th inst., relates that, after a fight for more than three years in the courts, Mrs. Frank Z. Wilcox has won her suit against the Supreme Council of the Royal Arcanum, headquarters of which are in Boston. Justice William S. Andrews directed a verdict in her favor for the full amount of the insurance policies carried upon the life of her deceased husband, with interest. The outcome is of interest to thousands of members of the order.

Mr. Wilcox was expelled from the organization because of his attacks upon Supreme officers for the increase

of rates of insurance. He instituted proceedings for reinstatement but died before the termination of the action. The suit was continued by his widow, Mary C. Wilcox, who was given a verdict for \$3,217.50.

New England Brevities.

Despite the inclement weather of last Friday evening, nearly sixty members of the Insurance Library Association gathered at the Exchange Club to dine and listen to an interesting and valuable address by F. W. Brown, of Boston, whose theme was "Forms of Policies in Use in New England."

It seems to be settled that when Mayor-elect Fitzgerald, of Boston, takes office on February 7, the present Fire Commissioner, Samuel Parker, is to be superseded by a new appointee. Mr. Wells, who was fire commissioner during Fitzgerald's past term, was a Storrow supporter in the recent election, and is not considered to be in the running. Among those "mentioned" as "possibilities" are former Civic Commissioner Kennedy, former District Chief Keyes and former Election Commissioner Shaw.

At a special meeting of the stockholders of the Travelers of Hartford, held Wednesday of last week, the recommendation of the board of directors that the capital stock of the company be increased from \$2,000,000 to \$2,500,000 was approved. A special

ALLAN WATERS, Sup't of Agents.

dividend of 25 per cent., covering the increase, was paid to the stockholders.

The building of the Boston Young Men's Christian Association was gutted by fire last Thursday morning. The property loss is about \$225,000; insurance on contents, total loss, aggregates \$13,108; on building, about 75 per cent. loss; \$132,192 insurance is involved. Messrs. Neiley, Bush, Adlard and Battilana are the committee on adjustment.

There is no sentiment about the fire fiend, else with St. Valentine's Day so near at hand, he should have spared the valentine factory of the George C. Whitney Co., at Worcester, Mass., which became a prey of the flames on Wednesday of last week. Total loss, about \$300,000; insurance on stock aggregates \$42,000.

The residents of the Juniper Point district in Salem, Mass., have petitioned the City Council for the installation of a salt water fire service, present supply being deemed insufficient to cope with the needs of the district.

The Central National Fire, of Chicago, has applied for admission to Massachusetts.

Following the demise of Horace Anderson, the surviving partner of the Anderson, Adams & Co. insurance agency, of Portland, Me., will carry on the business under the same firm name.

At Lynn, Mass., F. H. Vickery has been admitted to partnership in the insurance agency of Thomas H. Knight, which now is styled Thomas H. Knight & Co.

STRONGER THAN EVER.

The annual statement of the Niagara Fire Insurance Company is the best ever. It has total assets of \$6,122,659, representing an increase of nearly \$900,000, and a net surplus of \$2,294,309, being a gain of over \$700,000.

GOING INTO CASUALTY LINES.

Insurance Commissioner E. Myron Wolf, of California, has resigned his portfolio and will join President F. B. Lloyd in the developing of the new propaganda of the Pacific Surety company.

With a doubled capital and surplus, and with the new "power stations" on the "main lines," and electric equipment, there is no reason to doubt that the Pacific will be sure to quickly grasp the present opportunity for casualty and surety underwriting on safe and sane lines.

Incidentally, it is noted that Mr. Wolf is the first of the several State commissioners who have recently re-

signed to accept company berths and chosen casualty lines for the exercise of his acquired insurance experience. All others, with one exception, have gone into life insurance.

The casualty and surety field on the Coast offers an unusual opportunity for the Pacific, in fact, for several first-class home companies, and dynamoed as it will be by Lloyd and Wolf.

A CREDITABLE SHOWING.

The 118th annual statement of the Insurance Company of North America shows total assets of \$13,385,501.56. This includes \$3,000,000 capital, \$6,813,862.47 reinsurance reserve, and \$2,589,406.64 net surplus. The following remarkable gains are shown: In assets, \$1,371,438.93; in reinsurance reserve, \$349,934.71, and in net surplus, \$838,500.98.

The report of the results of experiments undertaken by the Government to determine the decomposition products of photographic films, the temperature at which decomposition is brought about, and the consequent storage hazard, will shortly be issued by the United States Geological Survey.

34 Nassau Street,

New York, N. Y.

FAILS TO RECOGNIZE THE HAZARD.

Governor Fort, of New Jersey, surely is not an insurance expert. In his message to the Legislature he strongly recommends that the State authorities establish their own insurance fund, taking the unique stand that because the State has suffered no severe conflagration in the last few years, there is every reason to believe that it probably never will. He forgets that a man died yesterday who never did it before.

One feature of the Governor's message, though, that is of interest to fire underwriters, is his plea for better fire protection facilities for State buildings. The Governor, however, forgets that the cities of the State of New Jersey are just as much the people's property as the State buildings, for he makes no plea for the elimination of the fire hazard generally. He says:

An inquiry into the insurance carried upon the various properties belonging to the State shows that the total amount, including that on the Capital, is \$3,892,725. This is a very large and, to my mind, a very excessive amount of insurance. The State seldom has a loss by fire, and when a fire does occur the damage is usually not great. The present method of each institution placing its own insurance is not a wise one. The insurance on the property of the State should be under general supervision, and should be placed after most careful consideration and at the lowest possible rates. Besides that, the time, in my judgment, has come when the State should begin to prepare to assume the insurance risk on its own property by raising a fund for that purpose. If the average amount of the premiums paid per annum for the next ten years were transferred to an insurance fund, we would have an abundance to make it reasonably safe to cease to insure the State's property.

In addition to this, there should be a proper supervisor of all buildings in the State, that they may be properly equipped for necessary fire protection, so that the limit of possible loss may be reached. Of course, on State property, there is no moral risk for the insurance company, as there can be no motive of personal gain to any one to cause the destruction of any property of the State. The rate which we are paying at the present time for insurance is too high. I suggest that the whole matter of the insurance of the property of the State be placed in the State House Commission, and that they be given power to engage a proper person to see that the buildings of the State are properly protected against fire, and that such person shall also keep the records as to the insurance upon and the necessity for renewal of insurance on the several buildings of the State.

The Fred L. Gray Agency, of Minneapolis, outranks all others outside of New York and Chicago with \$447,000 premiums for 1909.

STATE RATEMAKING HALTED.

When Oklahoma was granted statehood under the most remarkable constitution in all history and which practically provided for everything past, present, or to come, so that the work of a Legislature was merely perfunctory and innocuous, except for political campaign purposes (not omitting the financial consideration for the contributions to its dignity), it was inevitable that it would inspire the legislators of contiguous States with ambitions. Hardly had Oklahoma's guarantee of bank depositors gotten into operation, before Kansas, Texas, Nebraska, and others within the infected zone, developed the fatal symptoms and started for the flesh-pots of Egypt.

The peculiar mark of identification of the microbe is its phobia for insurance companies. This found expression in the enactment by half-a-dozen States of the most amazing collection of statutes—or supposed-to-be-statutes—that could be found since the blue law days of New England, when they burned a bewitchingly beautiful woman at the stake as a witch in reality, and arrested a man for kissing his wife on Sunday.

Among the phenomena developed was the fixing of the prices for commodities offered for sale. This reached concrete expression in Nebraska's fixing rates to be charged for bonds by surety companies, and in Kansas for fire companies policies. Some of the woollies even got a reflex expression in the Congress of the United States in seducing officials into a rating scheme which was quickly killed.

A WELL EARNED TRIBUTE.

The January meeting of the New York Insurance Exchange was held last week and following the usual routine the committee, consisting of Messrs. Affeld, Case, Driggs, Shallcross and Herrick, who were appointed at the last meeting to prepare resolutions respecting the resignation of Mr. Hess, made the following report:

Your committee to whom was referred the matter of preparing suitable resolutions relating to the resignation of Mr. Hess as manager of the exchange, beg leave to report as follows:

The members of the New York Fire Insurance Exchange desire to record their appreciation of the valuable services of Henry E. Hess, rendered to the exchange in the long period of years during which time he has so acceptably and successfully administered its affairs as manager.

With his known ability, ripe experience, and mature judgment, Mr. Hess brought to the position the native qualities of fairness, strength of conviction, and fidelity of purpose,

which so amply qualified him to successfully cope from the very beginning with the difficult problems that might well have discouraged a man less capable and less determined.

While the exchange in the greater degree has profited by his judicious management of its affairs, it is well recognized that the scope of its beneficial influence has extended to the entire business community. It is the desire of the members of the exchange to convey to Mr. Hess their best wishes for the full measure of success which must come to him in the administration of the important office which he has been selected to fill, and the assurance of their strong conviction that his record and achievements in the business of fire insurance have well prepared him to render distinguished service to those interests with which he has now become associated.

The report was seconded and unanimously adopted.

The National Surety is defending a suit for \$50,000 filed by the Western Pacific Railway to recover loss under the fidelity bond of its defaulting treasurer. The defense is based on three points, to wit: Failure to give reasonable notice, insufficient auditing of accounts and the rather remarkable one that the treasurer and not the railway company paid the premium. What next?

SANCHO PANZA'S WINDMILL.

The opera bouffe statesmen down at Washington are determined to humble the haughty surety companies, according to private advices received by "The Chronicle." Congressman Tawney, who tacked that schedule of surety rates on the tail of the last appropriation bill, passionately proclaims his discovery of a conspiracy among surety companies to defeat him for re-election by the use of a fund they have created. That's his measure.

The fiasco of the attempt of two or three department clerks to "spank" the surety companies, which succeeded for a few days, has given their measure, and the matter is now up to the substantial men in Congress.

The latest efforts of these small fry to attract attention to their desirability as watch-dogs of public welfare is expressed the second presentation of a scheme for the Government to do its own bonding through a fund to be created for that purpose by assessment of the employees required to give bond. This is their original scheme amended in the hope of overcoming the prompt and overwhelming rejection which befell its first appearance.

At an expense totally out of proportion to any possible benefit derivable, the Government has had a corps of clerks working under direction of an able and high-priced actuary to ascertain what premium and loss experience surety companies have had on Federal business and with all due respect for the exact accuracy of the figures resulting it must be remembered that it is utterly impossible to reach even a remote conclusion that would be fair and just to the companies. This is because the actuary has no means of ascertaining the number of volumes of failing or struggling undertakings which the companies have bolstered up and matured. Neither can the cost of administering the suretyship be ascertained. To be just to the sureties the Government should carefully consider its own reasons for exacting bonds, and if not based on sound principles or accomplishing any results, abolish the requirement. It's the losses prevented and not the losses paid that would best tell the story.

Speaking of the proposed scheme a member of the House committee says:

"The plan will probably be to provide for the deduction from the salaries of each bonded employe a sufficient percentage to cover the estimated cost of bonding him as ascertained by the actuaries from their

tabulation of Government experience. This will then be paid direct into a joint fund, which will be set aside in trust for that purpose, and will be employed as occasion may require it to make good defalcations or other contemplated losses. This will obviate the objections which have been offered in some quarters that in the event the payment when made by the employes themselves would constitute a joint or mutual assurance fund on which the employes would have claims and a right to compensation from which would inhere in the Government, thus destroying possibly the right of the administration to prosecute employes for defalcation. By paying the sum necessitated for the premium directly into a fund of the kind described without passing it through the employes or officers' hands any such question will be avoided."

Administrative officers do not on the whole favor the taking over of the bonding insurance system by the Government itself, alleging that it will call for the establishment of another bureau with a staff of officials, etc., and that such an organization is not desirable unless the Government intends to go into the work of regulating and controlling the business of insurance to a much larger extent than heretofore. The Tawney legislation of last session has already entailed heavy work upon them and they are of the opinion that it has caused confusion.

There is sure to be a hard fight when the scheme is brought up, as opinion has crystalized much more definitely both for and against the plan than at any time in the past.

SHOWING THE FEET OF CLAY.

There is a clearly defined and rapidly growing impression that the Commercial Casualty Company, Newark's latest insurance proposition, is, after all showing unmistakable symptoms of being a mere promotion, much to the chagrin of those who have given it full credence.

The election of Feigenspann, a brewer of Newark, as president, and the reputed making of a twenty-year general agency contract with the organizers, covering the largest cities in the United States, and other matters, do not need a Sherlock Holmes to interpret. He who runs may read. And he who reads may run.

Rumors for some months have connected two or three notorious ex-officials and discredited casualty "promoters," with the Commercial, but in reply to all inquiries they have been vigorously denied. Now the feet of clay are visible.

AMERICAN SURETY FIGHTS.

In all this medley of folly there seemed no company of any class that dared tackle the microbe in its den until the State of Nebraska (which, it may be recalled, is the occasional home of the father of anti-insurance venom, William J. Bryan), undertook to fix bonding rates and got a prompt rise out of the American Surety Company, and the result of which is that the company has won a signal victory and one that enables it to smile even while casting up the costs of a defense to which it was unfairly and unnecessarily subjected, all through initial assinine and stupid politics.

The American Surety has rendered a distinct service to every insurance interest by its victory over the powers that prey. The decision of the United States Circuit Court at Lincoln last Saturday that the ratemaking statute of Nebraska was unconstitutional will have a powerfully deterrent effect on other budding statesmen and their products.

The Story of the Case.

The Nebraska State rating law took effect in July, 1909. It provided for the appointment of the Governor of the State, the Attorney General and the State Auditor as a board to fix the maximum rates of premiums to be charged by fidelity and surety companies operating in Nebraska on business situated in that commonwealth.

The American Surety on August 3, brought an action in the United States Circuit Court to restrain the enforcement of the provisions of the rating law. On the following day, August 4, the State authorities in retaliation brought two suits against the American Surety Company seeking to have it punished under the Junkin act of 1905 for failure to comply with the provisions of that statute in not filing certain statements and bond. The next day, August 5, the State commenced still another suit against the surety company. This was an action in equity to oust the company from the State.

This action in equity brought by the State to prevent the American Surety from transacting business in Nebraska was heard in the County Court of Lancaster County, Nebraska, and that court has just handed down a decision dismissing the action. With this case falls the other two suits and the retaliatory action by the State fails.

On Monday Judge T. C. Munger, of the United States Circuit Court, granted the injunction asked by the American Surety Company, restraining the State of Nebraska from enforcing the provisions of the recently enacted

State rating law, pending final action.

In deciding in favor of the American Surety the court took into consideration the contention of the attorneys for that company that the State rating law was unconstitutional.

The main features of the company's claim for a restraining order were in effect:

That the measure was unconstitutional because it violated the section which provided that "no bill shall contain more than one subject, and the same shall be clearly expressed in the title."

Because it assumes to fix the rates of premium on fidelity bonds covering the fidelity of Federal employes running to the Federal Government and to national banks, and is therefore interference by the State with matters solely within the jurisdiction of the Federal Government; that the statute is class legislation, and therefore repugnant to the provisions of the constitution of Nebraska and to the fourteenth amendment of the constitution of the United States; that the act is repugnant to the State constitution and the United States constitution because the act impairs the obligation of contracts between the State and surety companies doing business in the State pursuant to the prior and still existing laws; that it deprives surety companies of their property and their liberty of contract and therefore contravenes the provision of the fourteenth amendment of the United States constitution and also the State constitution:

That the said premium rate statute was not within the scope of the police power of the State.

It is fully conceded that the opinion will have a heavy bearing upon the whole subject of State ratemaking.

Where It May Lead.

The fire people who have been acquiring gray hairs under the Kansas mustard plaster application of the State ratemaking law, and spending much valuable time at the pink tea conferences on the question of "Shall We or Shall We?" and waiting to see what Evans was going to do, have been galvanized into a semblance of having a backbone. So terribly timid have they been that the American Surety's victory shocks them. But this is not the American's first stand against aggression. It has rendered valiant service to insurance in repelling former incursions of Rob Roy politicians, which proposed to exact tribute from all companies, that the faithful henchmen might exist in ease.

The galvanic effect is quite noticeable in the fire circles, and it is quite

probable the State rating laws of other States and the District of Columbia will be tested.

And just here it must not be forgotten that the Board of Casualty and Surety Underwriters is an effective organization, with an able executive committee in charge of legislation and with a chairman of that committee who is unparalleled. Perhaps the fire people can make a front. It is certainly up to them.

FIRE PREVENTION AND CREDITS.

It's money in the pocket of every business man of the country, if the present stupendous fire waste of the country is reduced and every man knows it can be reduced millions of dollars yearly if the problem receives due attention. This matter has to do largely with the credit side of commerce and for that reason the insurance committee of the National Association of Credit Men has been doing yeoman's service to arouse that widespread interest in fire insurance and prevention, which all agree is the first and highest necessity. The National office will gladly afford anyone interesting information regarding the campaign planned by the fire insurance committee.

FAR FROM A SETTLEMENT.

Nay, nay, Pauline, the Chicago committee of the Burglary Insurance Underwriters Association has not settled the Chicago situation, not by several degrees. Chicago local men see in the published draft of the proposed agreement the fine Italian hand of A. U. Quint, associate manager of the American Bonding, and that fact alone is enough to raise a riot. Mr. Quint was at the recent New York conference, and an official of an Eastern company, who was in Chicago since, told several people about what happened there, and that has confirmed any suspicions they may have entertained as to Mr. Quint's connection with the agreement.

One prominent general agent has intimated in most positive terms that his company never will consent to the proposed arrangement. Others expressed equally strong adverse opinions, although not always in a position to speak for their companies.

Will They Handle Their Agents?

Four companies have their general agencies in fire offices, and it is not within the range of probabilities that they are going to handicap their general agents by entering into an agreement under which they cannot pay brokers within 5 per cent. of what other general agents pay. A number of other companies, whose general agents or managers are not fire agents, have policy writing agencies in fire offices from which they secure the bulk of their burglary business, and it is not to be expected that they are going to tie those sub-agents down. This leaves a comparatively few companies which receive most of their business from general agents or managers who are engaged solely in the casualty or casualty and surety business. While this arrangement may look good to them their general agents are not all in favor of the 30 per cent. commissions on residence burglary which this arrangement would authorize them to pay.

Says Quint.

Mr. Quint says in effect to general agents who are in the fire business: "You pay whatever scale of commissions is agreed upon, and then some—to wit, fire insurance given in exchange, on which the fire agent will make an overwriting commission." The established general casualty agents say in reply: "You have the same chance as we have under a commission agreement. Go out and get sub-agents who are in the fire business and have business to give in exchange for burglary insurance. We have worked for years to develop good sub-agents, and we do not want

a differential in our favor nor will we consent to one in yours to put these men out of the running in competition. It is one of the handicaps of your youth that you have not yet established good sub-agency connections, and you must labor under it. We will not surrender the advantages gained by years of hard work."

Where the Shoe Pinches.

There are a few young offices situated much as the American Bonding is that probably sympathize with its efforts to get for the casualty offices a differential to offset the advantages the fire offices have, but they are only a few. The majority have their own fire agency connections. To most of the general agencies or branch offices burglary insurance is just a little side issue. The heads of these offices would rather do the little business most of them are doing, do it in peace and at a rate of commission that gives them a small profit, than to do a large business after a period of turmoil and make nothing on it. Considering Chicago's burglary loss ratio, some companies can look with considerable complacency upon the small volume of business they are getting. Burglary insurance is no side issue with Mr. Quint, it is his main business, on which alone he must make or fail to make a record with his company. That makes him impatient of any obstacles which impede his rapid progress, and in the position he has taken it is altogether likely his company stands behind him. It is evident that in Chicago there is a conflict of interests such as it will be very difficult to overcome. Compromise appears scarcely possible. The differences of opinion as to the rate of commissions are marked, but they could probably be harmonized. The position of the fire agent in the burglary business in Chicago is the big question, and there appears to be no middle ground on this. One side or the other must give in if there is to be an agreement, and nobody is talking of surrender.

ADDRESS, AGENCY DEPARTMENT,**The Empire State Surety Co.
NEW YORK**

A STARTLING STATEMENT.

The first conference on the stamping out of that peculiar disease, which, for want of a name, is called "Hook-worm," and for which object John D. Rockefeller has donated a million dollars, closed its session in Atlanta yesterday. Dr. C. W. Stiles, discoverer of the microbe, was the Federal Government representative, and to the conservation of life advocates the report of the meeting will be of intense interest.

Dr. Stiles' Alarming Statement.

"The most serious infectious disease in the South to-day is that of the hook worm," declared Dr. Stiles in addressing the opening session. "While specimens of the hook worm have been found in New England, the Middle West and in the Northern Pacific States, the disease is primarily one of warm climates. The hook worm found here has been traced to the west coast of Africa and it undoubtedly was brought here by the negro."

"Twenty-five per cent. of the mill employes of the South are infected with the hook worm," said Dr. Stiles, who based the statement on personal visits made to 128 mills in Southern States.

Dr. H. F. Harris of Atlanta, to whom Dr. Stiles referred as the first man to recognize the hook worm in the United States, discussed the treatment of the disease and declared it to be easily susceptible to treatment.

"Excessive Waste of American Life" was the subject of an address by E. E. Rittenhouse of New York, president of the Provident Savings Life Assurance Society.

President Rittenhouse Speaks.

President E. E. Rittenhouse, of the Provident Savings Life of New York, spoke on "Excessive Waste of American Life," pursuant to the now fixed policy he has inaugurated for his company under which the care of policyholders' health and welfare and the conservation of their lives as an economic as well as a patriotic and philanthropic, aside from its profitable consideration, has been laid down as an elementary principle of business success.

"The Chronicle" hopes to favor its readers with this address in full in an early issue. It is exceedingly well timed, coming as it does at the moment when the National Civic Federation, the Association of Life Insurance Presidents, and the "House of Governors" are all in session and the whole country is aroused on the subject of conservation of life, limb and National energy.

Mr. Rittenhouse has made a signal mark on life insurance progress by

his advanced views already successfully demonstrated, as extended to the policyholder, and not confined solely to employes, as the Metropolitan has been doing for some years.

The subject is deep and wide and frequent with potentialities.

THE AMERICAN CREDIT INDEMNITY CO.

The American Credit Indemnity Company has safely passed the refining process of the crucible and emerges with the highest possible evidence of soundness and security.

During the period of its examination and subsequent reorganization, covering the past few months, the company has been the target for bitterest attacks from some competitors that were utterly reckless in mendacious energy.

But the company survived in good form and that fact is its best asset to-day. Few companies have ever weathered the fierce, biting blasts from which it has calmly emerged to a safe anchorage. The wolfishness of the pack toward its wounded is a sad commentary on insurance human nature.

In response to an inquiry Superintendent Hotchkiss has made the following ringing and patriotic official utterance concerning the attack on the company:

"The department is able to say that after an inquiry into its affairs which has been most exhaustive, it finds that even after a necessary reduction in the capital to \$350,000, there is a surplus to policyholders of \$360,000.

This department is informed that agents of rival companies are making statements not based upon facts for the purpose of twisting this company's business to their companies. In considering any such statements, you should consider the fact that this department has determined, after a most exhaustive examination, to permit the company to continue business, and that this would not have been done had it not felt that such continuance was entirely safe for present and future policyholders.

"In computing the reserves of this company we used a much higher ratio than ever before for credit insurance business, a basis which, it is confident, will be at all times sufficient to fully protect policyholders. The same rule of reserving will hereafter be applied to all credit insurance.

"Permit me to add that the election of E. M. Treat as president of this company, and the choice of Isaac H. Lionberger as chairman of its board of directors and finance committee, and thus its financial executive, has the approval of the department."

AETNA'S REORGANIZATION.

Secretary J. S. Rowe, of the Aetna, calls "The Chronicle's" personal attention "to three facts:"

That the resignation of William J. Gardner, formerly in charge of our New York branch, 46 Cedar street, has given us an opportunity to effect some very desirable changes in general methods and management of the office.

That the business of our New York branch is now being ably conducted under the direction of Walter A. Hughes, Charles H. Phelan, and Beverly W. Wrenn, Jr., aided by a corps of expert and courteous assistants.

That you will find our New York branch office pervaded by an atmosphere of welcome, and a spirit of helpful co-operation that will make you feel at home.

The American Bonding Company has appointed Frederick L. Cadogan, formerly an adjuster, to succeed Norman L. Moray as general burglary manager. Moray goes to the Great Eastern. It is quite a compliment to Cadogan to be selected after the company had gone through the burglary lists far and wide with a fine-tooth comb.

BOILER INSPECTIONS AND INSURANCE.

There is an intense degree of interest attaching to the coming battle of the giants when a suit of the Pabst Brewing Company, of Milwaukee, just filed for \$150,000 against the Hartford Steam Boiler Inspection & Insurance Company, comes to a hearing, because of the fighting prowess of both.

The suit was filed in the Federal Court of Milwaukee to recover \$150,000 under the defendant's policy of steam boiler explosion insurance covering six boilers in the plant of the plaintiff. This policy fixed a limit of \$50,000 liability for "any one explosion." On November 1 there was a boiler explosion and after the cyclone had passed and the dead removed, it was found that three of the boilers had joined the racket and deposited their atoms over a large area. The issue is: Was it one explosion or three? That is what the court is called on to determine. The company stands on the apparently reasonable, highly logical and quite tenable ground that it was a single explosion; that Pabst people contend that each boiler exploded separately.

The Commissioner's Findings.

J. D. Beck, commissioner of the Wisconsin labor and statistical bureau, made an official report on the explosion with which he has favored "The Chronicle," and from which the following is extracted:

There were eight boilers in the house, two of which were new, not having been fired. The other six were connected to the main steam pipe, forming a battery of 2,400 horse power, each being a 400 horse power boiler. The boilers were in a row, extending from east to west, and were numbered from one to eight in the same way. The first three exploded and the fourth was badly damaged so that it could not be repaired. Probably boiler No. 1 exploded first.

The boilers were regularly inspected, and were always reported as in substantially good condition. The Pabst company has always done everything suggested by this bureau or its inspectors, without sparing expense. Therefore, if the explosion was due to the defective character of the boilers, it cannot be said that the type was chosen from improper motives. Mr. Pabst was willing that a thorough investigation should be made, being anxious to have all the facts brought to light. The insurance company, on the other hand, declined to admit factory inspectors to its proceedings of inquiry.

There are a number of theories as to what caused this explosion:

(1) The main steam pipe may have given away. It is barely possible that some parts of the pipe had been so weakened by corrosion as to give way suddenly, so causing the explosion, but an examination of the piping did not furnish any confirmation of this.

(2) It was originally suggested that the firemen negligently allowed the water in the boiler to fall too low. Inspection, however, failed to show any signs of overheating. Moreover, the competence of the firemen would tend to clear them of any responsibility.

(3) There are some indications that the exploding boilers may have been overcrowded, but there are stronger reasons for ascribing the accident to

(4) The faulty design or construction of the boilers. This explanation is evidently more fundamental, at least, than the preceding, from the fact that all the exploding boilers failed at the same place—the rows of rivets which held the reinforcing strips to the bottoms of the drums. Here fractures were apparently caused by the alternating contraction and expansion of the drum plates. There were probably enough of these fractures to weaken the drums so that they could no longer withstand the working pressure. Before the explosion the seams had been excessively calked to prevent leaking.

(5) If there were fractures before the explosion they ought to have been discovered by a careful inspection. But there is ground for the suspicion that the last inspection had not been thorough. After the explosion, fractures were found in some plates which were not very badly damaged, and some employees and the boilermakers found fractures in unexploded boilers. The testimony at the coroner's inquest tended to show that the inspection had been carelessly performed.

This will probably be either a very short or a very long drawn out contest. In either event it will be interesting as it involves many principles of law and evidence never before subjected to severe strain or test.

Was it one explosion? If it was three, which went off first and misled the others, and which one created the liability?

The "pink slip" charge of 25 per cent. that has been attached to all insurance policies of the manufacturing and mercantile establishments of Rochester, N. Y., following the big fire there on April 12 last, has been removed.

AS TO BANK DEPOSIT INSURANCE.

"The Chronicle" has had no more critical and diligent reader of its bank depositors insurance articles than President John Schuette, of the Manitowoc (Wis.) Savings Bank. He has already contributed two interesting articles on the subject. He has two plans at his fingers tip. The preferred one is the Federal Government's extension of its power over the National banks. As an alternative he has another by private enterprise which was elucidated by him in an article in "The Chronicle" a year ago. This contemplates a "mutual" plan of the banks themselves with about ten "life saving stations" throughout the United States equipped with sufficient ready cash to reach any "vessel in distress" in short order.

Mr. Schuette is an old and successful banker and his opinions are full of vision for the newer trailers. Therefore the following communication just received from him will be read with unusual interest:

President Schuette's Letter.

My attention has been called to a article in the "Bankers and Investors Magazine," of New York, by J. A. Pondrom, who believes that he can annihilate deposit insurance with a stroke of the pen.

He says that the insurance of deposits can be reduced to one short sentence: "Hereafter, whenever a bank fails, all other banks shall be required to pay its debts."

This is not literally true, although it may have that effect.

The facts are that it is proposed that each bank shall be required to carry insurance equal to what it is due depositors.

To accomplish this each bank should be required to deposit with the Government, as insurance trustee, the amount of 1 per cent. of its average deposits. This should remain an asset the same as its capital, as if it were a regular insurance company to be returned when an unimpaired bank goes out of business. This aggregate "capital" would soon reach \$100,000,000. It would not really be needed, but it would at once inspire unbounded confidence in the safety of bank deposits.

Annual Levy.

Let annual dues be one mill on the average deposits, equivalent to \$1 on every \$1,000 deposited, which is nearly twice the sum it would have cost to pay all the losses sustained by depositors in National banks since they were organized 45 years ago.

These dues, of one mill annually, would be subject to reduction as the losses would allow. This then would be the limit of the bank's liability, and the Government would have no other liability than the supervision of the system, as it now has over National bank notes.

Therefore a bank is not, as Mr. Pondrom claims, in any event compelled to pay the debts of a failed

bank, except so far as concerns annual assessments, which would be more than ample.

To require a bank to keep its assets insured which incidentally insures its depositors, is only applying the same safeguard to the depositors that a bank applies to those of its customers who are largely in debt. We must keep in mind that the banks are the largest debtors of any class, many of them owing over ten times more than their capital. If a banker were to loan a customer who had a capital of \$10,000, the sum of \$100,000 or ten times more than his net worth, without security, or without being insured against loss, he would be considered a most reckless banker, and be held criminally liable.

All must admit that anybody owing ten times more than his net worth, without having his assets insured, may, with the most honest intention, though misfortune, not only lose his own capital, but what he owes his creditors besides.

Government insurance of deposits is not, as Mr. Pondrom asserts, unfair or unjust, but exactly the contrary; it is entirely fair and equitable.

He further claims that the insurance scheme is to "throw dust in the eyes of those who do not understand the subject. And on the theory that depositors are fools and all you have to do to assure them is to tell them that they are insured."

Will Inspire Confidence.

Let me assure him that, fools or no fools, the people, as soon as banks are insured under the proposed plan, supervised by the Government, will feel as safe over their bank deposit, as they now do as to bank notes. Bank runs could never again recur, and would become ancient history.

Again he says: "What bank would want a large capital and build up a surplus when all could be swept away by the acts of men he knows nothing about?"

It seems to me that he attempts to throw dust in the eyes of those who do not understand the subject as he charges those favoring government deposit insurance with doing. Now, let me enlighten him.

First, it is proposed to limit the deposits in proportion to the capital of a bank. Second, how can a bank's assets be swept away after they are insured? And why will they not be swept away if not insured? This is the conundrum which his argument presents. Can he mean that the in-

significant premium of one mill would sweep away the assets of the bank?

How absurd! Does the owner of a house, because he keeps it insured, regard his investment more unsafe than if he were not insured?

Not Paternalism.

He closes with the general assertion that it is "Socialistic Paternalism" run wild. As to this, I would remind him that banking was the very first institution the Government believed ought to be, and has been paternalized. And after witnessing and suffering the dire effects of recurring bank panics and the evident unwillingness or incapacity of the banks to remedy this curse, which they so easily could do, it is now proposed that it take another turn at "paternalism," as it is in duty bound by our Constitution, "to insure tranquillity, and promote the general welfare of the people."

This it is now proposed that it do in a limited way by safeguarding the people's money by the Postal Savings Banks plan, the scope at which may from time to time be extended.

When these are established, we will have deposits guaranteed by the Government. Logically, and as a matter of necessity, these will be followed by guarantee of deposits by the different States, by insurance companies, and by other means which may then be devised. Then, when too late, the bankers will regret not having supported a National deposit insurance law, which would in every way be so much more efficient.

THE HOUSE OF GOVERNORS.

The officials of the great life insurance companies have faith in the House of Governors. Lack of a uniform insurance code for the States is costly. The twenty-five billions of life insurance now in force, with accumulated assets of four billion of dollars, pay a toll annually of \$15,000,000 to \$20,000,000 because of this lack.

But in nine years 1,200 specific laws relating to life insurance have been passed, and these laws may not even be compiled because of the constant changes in them. Besides, the unwritten law must be interpreted in the complex light of 30,000 judicial decisions. The task of bringing uniformity by piecemeal legislation out of this mass of incoherence is well-nigh impossible, and would consume many, many years. Meanwhile the tens of millions of the policy holders' money are being wasted by the conflict. What is to be done?

A Federal insurance law would be unconstitutional. But from the meetings of the Civic Federation and the Governors the life insurance presidents have taken heart. They propose the drafting of a code. "Even a very considerable expense could be wisely incurred on the part of the companies in behalf of their policy holders if the end desired could be achieved," says President Dryden, and "that such achievement is possible I am fully convinced."

But how convince the different State Legislatures? The Governors, acting together in a reasonable spirit, may help. Armed by the "most thor-

ough, impartial, and qualified recommendations of experts of the highest standing," they may make such a code speedily acceptable to their Legislatures. That, at any rate, is the belief of the Association of Life Insurance Presidents, and on that belief they are prepared to act.—New York Times, Jan. 20, 1910.

DIS-UNITED.

Otto L. Van Laningham has gone West, clear out to California. According to one published announcement of this fact he has not severed his official connection with the United Insurance Company for the very excellent reason that he never had any such official connection. It seems that all this time Mr. Van Laningham has just been acting as a good fairy to the United. He has been only an adviser. Freely and without price he has been donating from the ripe store of his experience to the upbuilding of the giant institution. It is understood that he is still with the United in spirit. By telepathy or telegraphy or telephony he will still give his advice when it is desired, but he will no longer occupy the inner office and exercise that mysterious sway over the destinies of the mammoth infant which has caused so many people to believe he was "It" in United affairs.

A Handicap to Any Company.

Possibly the United people are not throwing ashes on their heads because he has sought new fields of endeavor. The bumps have been coming rather swiftly of late in the form of depart-

ment bulletins calling attention to the fact—real or alleged—that a chief factor in the promotion of the United was a man whose former exploits had been of an expensive character to the companies to which he had devoted his services. When the organization of the United was started the sentiment against promotions on a high commission basis was not of the same pronounced character as it is now. While Mr. Van Laningham is one of the most resourceful promoters that ever tackled the insurance field, his methods are not of the kind to call out anything but criticism at present, and, notwithstanding his energy and power as an organizer, it is readily conceivable that the linking of his name with that of a company would prove something of a handicap.

EMPLOYERS' LIABILITY INDEMNITY.

A bill was introduced at Albany yesterday to require every employer to provide an insurance policy for each of his employees. For personal injuries where the wages have been \$2,000 or less the indemnity shall be equal to the employee's earnings, and shall be continued through the term of disability. In case of death the full amount of the policy shall be paid, not exceeding \$20,000.

This is but one of many prospective plans which must inevitably crystallize from the nation-wide agitation of the subject of employers' liability and workmen's compensation. It is a healthy sign.

The Northwestern Mutual Life Insurance Co. of Milwaukee

GEO. C. MARKHAM, President
A. S. HATHAWAY, Secretary

New Business Paid-For

1905		\$ 90,334,038
1906		93,563,152
1907		102,233,634
1908		109,773,709

Each year larger than any in the previous history of the Company.

Commenced Business 1858

INSURANCE MEN will note the significant increase in The Northwestern's new business during the past four years.

IMPORTANT FACTS relating to this business are shown by the following percentages:

	Expenses	Mortality	Interest
1905	12.15	67	4.73
1906	11.76	59	4.72
1907	11.81	58	4.76
1908	10.76	59	4.84

It is capable of easy demonstration that The Northwestern is the best Company to insure in.

See The Northwestern's policy contract with its Dividend Options, Paid-up and Endowment Options, Options of Settlement and the Premium Loan feature.

Established 1836. **Entered U. S. 1848.**

The statement of the condition of the United States Branch on the 1st of January, 1909, in accordance with the laws of the State of New York, is as follows:

ASSETS	\$13,212,749.70
LIABILITIES	8,238,870.50
SURPLUS	\$4,973,879.20

As an illustration of the Company's practice in maintaining its Assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

THUS SHOWING EXCESS OF EXPENDITURE IN THE TWO YEARS OF \$2,710,650
AND INCREASE OF ASSETS IN THE SAME TIME OF 1,110,929

PROGRESS of the United States Branch: Net Fire Premiums—1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,028,010; 1898, \$4,079,422; 1908, \$7,427,617.63.

LOSSES—The amount paid in satisfaction of fire losses in the United States to the beginning of the present year was \$115,772,000. This large sum, in conjunction with the growth of the Company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Court of Appeals Smashes Section 97.

The New York Court of Appeals, on the 25th inst., handed down a decision in the case of Travelers Insurance Co. vs. William H. Hotchkiss, as Superintendent of Insurance, affirming the decision of the Appellate Division, Third Department, to the effect that the "select and ultimate margins," which are to be counted as a part of the aggregate to which the cost of new business of life insurance companies doing business in New York is limited under section 97, is not the margin which, on the basis of the select and ultimate method, can actually be realized from the premiums actually paid or to be paid, but a purely theoretical amount, ascertained at the moment the policy is issued and not thereafter to be affected by any question as to whether the net premium is sufficient to enable this full margin to be realized or the policy actually continues in force beyond one month, three months, or six months.

Possible Effect of Decision.

The Insurance Department has so far adhered to its original ruling, which was that no more than could be realized from the net premiums, after providing for mortality for the year, as per the select and ultimate table, would in any case be available. This ruling, which was supported by two opinions of the Attorney General, was based upon a construction of the language "ascertained according to the select and ultimate method of valuation," which was held by the department to signify that the smallest value that could be charged as a reserve, would be a sum sufficient to cover the mortality on this minimum basis until the next premium or instalment of premium was paid.

Had the present decision been rendered in the year 1907 there is

little doubt that in view of the sentiment which was then generally cherished in respect to the limitation upon cost of new business, it would have destroyed the effectiveness of what is now conceded to have been the most important and beneficial provision of the Armstrong laws. At that time there was on foot active movements on the part of several leading companies to take advantage of what they were advised, were loopholes in the law, to enlarge their first year expenditures in one or more of the following ways:

First, by writing a great deal of term insurance upon which the theoretical margins were larger than were needed, and, taken together with the loading upon the net premiums were in some cases considerably more than the entire annual premiums, and to pay correspondingly larger commissions upon such policies, and, also, for instance, upon non-participating whole life policies at the younger ages, as to which the same phenomenon was found to exist.

Second, to increase the commissions upon these policies somewhat, although not nearly to as high a point as the theoretical margins would admit of, thus unduly stimulating the sale of term insurance and other low premium policies, and to utilize the remainder of the theoretical margins thus set free to increase commissions on other policies.

Third, to utilize the theoretical margins upon quarterly premium policies which lapse before the end of the calendar year in which they are issued, to increase the commissions on all or some of the policies issued.

That danger was that by some of these means, or all of them, a company could virtually evade the restrictions of section 97 as regards the

cost of new business, altogether; because by the sale of a large number of policies on cheap term plans, or even on the whole life plan in some cases and at some ages, such sales being entirely fictitious or rebated to the limit, a large apparent increase in the aggregate theoretical margins could be made, which would be available to cover any deficiency upon the transaction of the bona fide new business. There was also the fact that, by writing an excessive amount of low premium business and paying therefor more than could be paid and have the same be profitable, a company would be found to be falling behind in surplus on account of extravagance, while at the same time appearing to live within the restrictions which were intended to guard against extravagance.

It was thought that upon ten-year term premiums, if the entire amount of the extra and fictitious theoretical margins were applied to pay commissions upon the same, a commission of at least 75 per cent. could be paid; and it was also known that if any such commission were paid, there would be a large actual deficiency, and, in view of the impossibility of preventing rebating in case large commissions were paid, a large final loss upon such business.

The management of certain companies, however, reasoned it out as follows: "By writing about a certain proportion of our total business on the term plan, we can set free enough money to pay a commission on all other plans, equal to at least 5 per cent. on a whole life premium larger than the law appears to admit of."

The two great companies which write a very large amount of quarterly premium business, are under-

HORACE WHITE DEEPER IN THE MIRE.

In contradiction of the "bunk" which Lieutenant-Governor White has been handing the press regarding his connection with the People's Mutual Life Association and League scandal, comes the sworn testimony of President Iram C. Reed, who says that "White was in the whole deal from start to finish."

If it is true that the \$20,000 which Lieutenant Governor White paid himself from funds that belonged to the People's Mutual was to cancel a debt owed him by John Tevis for his services in connection with the "negotiations for the Provident Savings stock" and the "negotiations for the Washington Life," the further testimony of President Reed causes one to wonder what kind of deals were on in these two transactions. Mr. Reed swore that "Lieutenant Governor White said he had various transactions of this kind that he had handled before and that they had always gone through all right and never had any trouble from them in any way, shape or manner."

Sure of His Ground.

The New York "American" of the 24th inst. says that "it will be shown before the disclosures are completed that for years a cabal of powerful politicians of both the old parties has been preying upon small, weak insurance companies in this State, and that the members of the cabal have reaped enormous profits from their operations." If this is a fact, the testimony of Dr. Kinne, the medical director, who swore that White conveyed the impression that the deal "would be favorably received by the Insurance Department," is amusingly interesting. It shows the absolute confidence of White and his associates, that their past experiences were a guarantee that they could "get away with it" with the Insurance Department.

Only \$2,350 Actually Put Up by the Promoters.

The latest statement in this connection issued by the Insurance Department is in part as follows:

John Tevis, a promoter, whose specialty is the purchase of life insurance companies, seems by the expenditure of only \$2,350 to have rented from Moran & Co., of New York, 25,000 shares of the capital stock of the Big Vein Copper Mine Company, which he claims to be worth upward of \$150,000, and with such rented stock to have secured what he claims to have been a loan to him from the Farmers Bank of Canada of \$150,000, with which sum, after taking out \$10,000 for personal use, he paid certain of his obligations, and by a disbursement of \$110,000, acquired control of a fraternal beneficial society with liquid assets of practically \$3,000,000.

"Now You See It and Now You Don't."

The present transaction seems to have started with this alleged loan, the loan being represented by Canadian currency brought to Syracuse in a satchel by General Manager Travers, of the Farmers Bank, on the evening of December 18, and by him taken to the First National Bank of Syracuse on the morning of December 20, there counted in the presence of the cashier, placed again in the satchel, the satchel being locked and placed inside the door of the bank vault. There the satchel remained until the evening when it was opened, the existence of the currency inside noted, the satchel again locked, and taken by Mr. Travers back to Canada.

The claim is made by Mr. Travers that he brought the currency, expecting that he would be met in Syracuse by one Herd, of New York, who would give him a certified check for \$150,000 in exchange therefor. A credit on the books of the First National Bank was, however, necessary. Hence as part of the arrangement a resolution drawn, it is understood, by Lieutenant Governor White, was adopted by the directors of the People's Mutual on the morning of December 21, with the result that \$180,000 of its securities were purchased by the First National Bank and \$150,000 of this sum passed to the credit of Lieutenant Governor White as trustee, whereupon the certificate of deposit was delivered to the People's Mutual.

In the opinion of the department, therefore, if the Farmers Bank rightfully repudiates the certificate, the transaction narrows itself into a small compass of a sale by the People's Mutual of its own securities, that the avails of such securities might be distributed among the officers of the People's Mutual in consideration of their resignations.

A MONUMENT TO LOCAL ENTERPRISE.

The Portland "Evening Express" very fittingly says: "It is too late in the history of civilization for the life insurance idea to need defense or promotion in public journals. Its beneficiaries have been too numerous, its benefits have carried too far for any to be unfamiliar with the good it does. Our home company (the Union Mutual Life Insurance Company), offered and managed by our neighbors and friends, men of the highest rectitude, with whose daily lives we are all familiar, stands as a monument to local enterprise."

The 60th annual report of this company shows that it made more general advancement in 1909 than in any recent year. Under the guidance of President Fred E. Richards, the company has been noted for its conservatism. It closes the year with total assets of \$16,084,398 and surplus of \$1,337,628.

INSURANCE COMPANY SECURITIES.

The book containing the list of securities held by insurance companies with the valuations affixed as of December 31, 1909, prepared by the special committee of the National Convention of Insurance Commissioners, was completed this week.

A supplemental list containing stocks not in the present edition will be issued by February 1.

The valuations are, as far as possible, on a purchasing basis. In accordance with the requirements of the uniform statement blank adopted by the National Convention of Insurance Commissioners, values of bonds are given in every case not including accrued interest. Stocks have been valued on a flat basis, dividends declared and unpaid December 31, 1909, being included in the market value. In quoting the value of stocks the price per cent. (not per share) has in all cases been given.

For securities quoted only at long intervals, the most recent sale price was used, or in the absence of this, the most recent bid or asked price that could be obtained. Where, in the opinion of the expert employed in making the valuation, the quoted prices were merely nominal, the figures were adjusted according to his best judgment. Where there had been no sales or bids, it was necessary in valuing the securities to depend upon rates of dividends or interest paid, the book value of the security, subscription price, and in general the financial condition of the issuing company and the rates for similar securities.

The list is classified in groups and alphabetically arranged within each group.

The expert making the valuations was Marvyn Scudder, 55 Wall street, New York City, with whom a contract for the work was made by the special committee appointed by authority of the last Convention of Insurance Commissioners.

The UNION CENTRAL LIFE of Cincinnati

Has several good openings for first-class men. It is the Company of companies for the agent who will make an aggressive campaign for business, and who wants to win in competition.

The Union Central earns the highest rate of interest on its investments of all American companies.

THE BEST COMPANY For The Policyholder.

ALLAN WATERS, Sup't of Agents.

COURT OF APPEALS SMASHES SECTION 97.

(Continued from Page 1.)

stood to have discovered that, if they could utilize this method, they would obtain an additional theoretical margin, due to quarterly premium policies written and lapsing in the same calendar year sufficient to enable them to pay 10 per cent. of the ordinary life premium more on all plans.

Another company, doing a non-participating business exclusively, is understood to have come to the conclusion that it could increase its commissions at least by the equivalent of 5 per cent. on the ordinary rate plan, and possibly by the equivalent of 10 per cent., by taking into account the additional theoretical margins which would be set free on certain whole life policies and also on certain quarterly and semi-annual premium policies, written and lapsing in the same year.

What Will Be the Result Now?

There is little doubt that had all this been available in 1907 and 1908 when the general sentiment was unfavorable to this restriction, demoralization would have resulted. It is still possible for one or more companies to do something to destroy the work which has been accomplished; but it is not believed to be probable that most of the companies, or, indeed, many of them, would join in such a movement. In other words, the sentiment is now much more favorable to the restriction and to the principle involved in it and the practices of companies, having been brought to conform with the law as previously construed, are not likely to be widely altered.

At the same time, the decision undoubtedly emasculates section 97 and renders it susceptible of the gravest abuses. Instead of being a guide as to what can be profitably paid for new business, it is not unlikely that it will be a trap in this respect to some of the companies, the management of which may not yet be convinced of the merits of the standard, set up as a measure of profitable expenditure for new business.

Should Not Publicity Be Substituted?

This condition, which cannot be regarded as altogether satisfactory, must give rise to the question whether it would not be better to abandon the idea of restriction and to amend the law as regards publicity, so as to set up the standard as the statute was originally construed. It is not impossible that the value of the select and ultimate method as a measure of profitable expenditure would be greatly impaired if the statute as now con-

strued should hereafter be abused in any one of the manners to which it is now laid open. If restriction was necessary at the outset, it is not probable that its continuance, now that the practices of companies have been reformed, is so important that the opportunity should be offered of making the statute itself a laughing stock by reason of ready and ruinous evasions of the same.

Such would undoubtedly have been its fate, had the insurance department and the Attorney General held originally, as the Court of Appeals now holds; and, indeed, every preparation had been made to kill the statute by ridicule, when the Convention of the National Association of Life Underwriters opened at Toronto in 1907, which program was upset by the distribution at the opening of the session, of copies of "The Chronicle," showing that Hon. Otto Kelsey, Superintendent of Insurance, had so construed the law that the abuses and evasions by which it was believed that it could be rendered nugatory, could not be practiced.

Insurance Superintendent Burns, of Kansas, has issued his list of special hazards to which the recent rate reduction does not apply. There are comparatively few changes from the original list.

A FORTUNATE ILLNESS.

While Isaac Miller Hamilton, of Chicago, president of the Federal Life and of the American Life Convention, is not only respected by members of the last named organization, but has a warm place in their affections, nevertheless some of them are inclined to look upon a recent attack of illness that he suffered as in a sense providential. Last week Mr. Hamilton was to have addressed the Association of Life Insurance Presidents on the subject of reinsurance and mergers of life companies. Some of the members of the American Life Convention would much have preferred to have Mr. Hamilton decline the invitation to speak. Some others are sensitive on the subject of reinsurance and mergers. There have been entirely too many predictions that these will be common among companies of recent origin to make their discussion a pleasant subject. It is too much like telling a sick man stories about people who have died of his complaint. Therefore, when a visitation of providence prevented Mr. Hamilton both from mingling with the Eastern presidents and talking on a delicate subject, some of his friends, while deeply regretting the physical pain and personal disappointment he suffered, are said to have shown considerable complacency.

Fifty-Eighth Annual Statement of the Massachusetts Mutual Life Insurance Company Springfield, Mass. Year Ending December 31, 1909 On the basis of Paid-for Insurance

Income.	
Premiums	\$8,394,558
Net increase in book values of bonds, by adjustment for future amortization	445,587
Interest, rents, and all other income.....	2,582,324

FINE SHOWING OF THE AETNA LIFE.

Dating its organization back to the middle of the nineteenth century, the Aetna Life Insurance Company, of Hartford, Conn., not only can look back upon sixty years of beneficent and fruitful activity, but can also look forward to the continuance, indefinitely, of its good work. The showing of the Aetna Life's sixtieth annual statement, summarizing the income and disbursements of the company in 1909, and its condition, as of January 1, 1910, splendidly confirms its progressive strength, the ability of its administrative and its field forces, and the sterling quality of the protection it grants its policyholders in its various branches of life accident health and liability insurance. The Aetna Life entered the gates of 1910 possessed of well invested assets to the amount of \$97,227,607.99, whereof \$9,672,458.21 figures as surplus to policyholders. The company's income last year aggregated \$20,587,255.60, and it disbursed to policyholders the very substantial total of \$11,337,101.34. The Aetna Life last year also made notable gains in the elements that make for the strength and usefulness of an insurance company. There was an increase in premium income of \$721,994.69; in total income, of \$1,307,615.20; in surplus, of \$1,903,257.17; in assets, of \$5,102,983.29, and, of life insurance in force, \$13,858,006.12. The grand aggregate of life insurance in force in the company was \$293,523,233 at the end of last year, and, since its organization in 1850, the Aetna Life has paid its policyholders the tremendous sum of \$194,440,420.28. Surely, all that have the good fortune to be connected with the Aetna Life, either as officers, agents or policyholders, cannot fail to view its past achievements and its outlook for the future with the most profound satisfaction.

BETTER AND STRONGER THAN EVER.

The methods by which the former management of the Provident Savings Life Assurance Society permitted politicians and others to prey upon the society were a caution. So rotten were they that hardly had the Armstrong Investigating Committee completed its work before the president resigned. Even if bad, as he was charged with being, Scott should at least be given credit for getting the business that, with all its years of mismanagement, made the society's very continuance possible.

President Scott was succeeded in office by Timothy L. Woodruff. The abuses in his administration and the administration that followed, more or less under his domination, are too nu-

merous to be recounted here. The Knocks that the Provident Savings Life Assurance Society stood up under for four years would have toppled any bank over in twenty-four hours.

Fortunately the policyholders stood by **their** institution. They paid their premiums and permitted the grafters to kill themselves off. Still more fortunate was it that, though badgered and battered and barely in the ring, just one year ago, the society came into the hands of two real men, one now its largest stockholder, Judge Lockwood, and the other its president, Hon. E. E. Rittenhouse.

Few legal reserve life insurance companies have ever had the trials of the Provident Savings, and, under the conditions, none have ever recovered in the space of one year and attained such prestige and financial soundness as the society now enjoys. This should be appreciated by agents and policyholders alike.

The Provident Savings for the first time has an impetus worth while behind it. It has a conservative guiding hand at the helm. It has the right men in the right place. The following record of the first year, under the new management, proves this conclusively:

The present management took charge on January 1, 1909. The impairment was then \$133,000.

About the middle of 1909 the society asked the New York Insurance Department to make an examination with a view to issuing a certificate for the resumption of the writing of new business. A very searching examination was made which showed a surplus of \$70,000. The surplus at the close of the year was nearly \$155,000.

The company is now operating in nine States, and will enter three more within the next three weeks.

The assets of the society have increased during 1909 to the extent of \$356,000, and the surplus shows a net gain of about \$287,000.

THE PACIFIC'S FINE SHOWING.

The annual statement of the Pacific Mutual Life Insurance Company, of California, shows that 1909 was the most prosperous year that the company has ever had. Especially in the accident department did it make great gains. The increase in new business written in 1909 over that of 1908 is nearly \$3,000,000. The increase in the business in force is over \$7,000,000. The company was able to increase its assets over \$2,000,000, making a total of \$18,429,204, of which the surplus to policyholders is \$1,628,002, plus \$223,879, which has been set aside for future dividends. It is, indeed, a very creditable showing. President Cochran has good reason to congratulate his agency force.

AVAUNT! YE HOOKWORM.

He was a mournful looking wreck, with yellow face and scrawny neck, and weary eyes that looked as though they had monopoly of woe. Too tired to get his labors done, all day he loitered in the sun, and filled the air with yawns and moans, while people called him Lazybones. One day the doctor came and said: "Brace up, my friend! Hold up your head! The hookworm, deadly as an asp, has got you in its loathsome grasp! But I will break the hookworm loose, and cook its everlasting goose! Swing wide your mouth; and do not cringe—" and then he took his big syringe, and shot about a quart of dope, that tasted like a bar of soap, adown the patient's yawning throat—"I guess I got that hookworm's goat!" One gasping breath the patient drew, and bit a lightning rod in two, and vaulted over his cottage roof; and then, on nimble, joyous hoof, he sped across the windswept plain, and burned a school and robbed a train. The doctor watched his patient streak across the landscape sere and bleak, and said: "It makes my bosom warm! What wonders Science can perform!"—"Insurance Vindicator," New Orleans.

NOTEWORTHY ADVANCE.

The **BERKSHIRE LIFE** **Insurance Company,**

OF PITTSFIELD, MASSACHUSETTS,
takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy incontestable, and no restrictions upon residence, travel and occupation, after the first policy year, except as to military or naval service in time of war.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

For New York and New Jersey,
Postal Building,
253 Broadway, NEW YORK.

ANOTHER "QUEER DEAL."

On Sunday last Superintendent of Insurance of Ohio, Judge C. C. Lemert, applied to the Attorney General of that State for immediate action against the officers of the Bankers Reserve Fund Life Insurance Company of Cincinnati. Judge Lemert charges that the officers have deliberately attempted to loot the company by paying salaries wholly out of proportion to the business; that they have manipulated the assets of the concern, and have deceived the Insurance Department by padding the amount of insurance in force.

In his charges he refers to an alleged secret agreement between General Manager Ainsworth and the National Life and Accident Company, of South Dakota, by which Ainsworth was to receive \$50,000 when the proposed merger of the two companies was consummated.

Ainsworth had already received the sum of \$25,000 as part payment, but since the commissioner's action this has been paid back.

In this connection, T. A. Campbell, Chicago manager of the First National Life & Accident Company, who conducted the negotiations for the merger, was arrested in Cincinnati on Monday, charged with larceny.

\$500 Fee to an Ex-Official.

The reply of Vice-President Ainsworth practically denies all the charges of Commissioner Lemert, and is only interesting in the counter-charges which are, in part, as follows:

The view expressed by Superintendent Lemert is applicable to fraternal organizations only and not to companies conducted for profit. * * * The lapsing (by the Insurance Department) of a large number of policies in force and the charging out their reserve was a high-handed proceeding, reducing the company's volume of business as well as its credits of assets. The charging of dividends not earned or apportioned as a present liability is without precedent.

The railroading through the Ohio Department of the application of the Dakota company for a license, over the applications of other companies to do business in the State and the side-tracking of the same so as to give the South Dakota company the right of way was, to say the least, indecorous, but the stimulus of a \$500 fee to an ex-insurance superintendent was all potential regardless of the rights and privileges of the waiting companies.

NATIONAL PROSPERITY.

President DeBoer and his associates have reason to be proud of the 60th annual statement of the National Life Insurance Company, of Vermont. The company has on hand a surplus of \$5,829,869. Of this amount \$762,509 represents cash dividends payable in 1910, aside from which the increase in deferred dividend credits for the year

is \$186,564.23. Taken together with the increase of the general surplus this makes a total of \$1,312,453.

The cash income for the year 1909 amounted to \$8,418,275, while the total disbursement to policyholders was \$3,877,780.

Of its total assets of \$47,491,000, the officers of this company have invested \$45,000,000 in the very highest class of securities. In fact, this sum represents just three investments—municipal bonds, first lien mortgages and policy loans. The remaining \$2,000,000 is cash in banks and office, deferred and unreported premiums and a small real estate investment. In an institution of the size of the National this is a remarkable condition.

THE MASSACHUSETTS LIFE'S BEST YEAR.

The year 1909 was by far the most prosperous year in the history of the Massachusetts Mutual Life Insurance Company. Not only did the amount of new business paid for exceed that of any previous year, but the actual mortality was away below the expected, being less than 69 per cent. The total expenses for the year were only 18 per cent. of the premium receipts. This was made possible by the fact that this year, as in the past, no efforts were made by the home office to stimulate unduly the activity of the representatives in the field. The ability of the present field force can be testified to by the fact that, without any abnormal pressure whatsoever they furnished the company with \$34,000,000 worth of new business. During the year just closed the company distributed \$1,335,353 among its policyholders. This will greatly assist the agents to further the company's growth. In this connection, it is well to point out that President McClench and his associates are doing everything that they can to assist the agency force, for the constant purpose of the management is so to serve its present and future policyholders that all its contracts with them shall be

fully and faithfully carried out and the benefits intended for themselves and their dependents be completely realized.

As will be shown by the annual statement, which is published in this issue, the income for the year 1909 was \$11,422,469, and the company has total assets of \$55,164,772.

ELECTRIC STOCKS FORBIDDEN.

The Attorney General of Connecticut has held that investments in electric companies by life insurance companies is forbidden by section 3365 of the general statutes.

Insurance Commissioner MacDonald found that a number of life insurance companies in that State have a portion of their funds invested in electric and gas companies. The commissioner asked as to the legality of an investment by a life insurance company in the stocks or bonds "of a company whose business is the production and sale of electricity for light and power."

The opinion quotes several sections of the law forbidding investment in the stocks or bonds of mining or manufacturing concerns and holds that the business of the company in question is manufacturing.

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

Men of Character and Ability are invited to apply.

UBERTO C. CROSBY, General Manager.

RICHARD D. HARVEY, Assistant General Manager.

In Honor of the Great.

THE TOWER—THE COMPANY—THE MAN.

No one can gaze upon the Metropolitan tower and the great structure which it surmounts, that symbol of strength, accomplishment and progress, without at least some appreciation of the men that made that tower and structure possible.

Very fittingly the company gave a banquet last Saturday evening to celebrate the completion of the most remarkable structure of its kind in the world and as a testimonial of the successful consummation of the architects' years of labor.

All told, there were over nine hundred guests present in the magnificent new banquet hall of the Hotel Astor. Three hundred were connected with the company in the office or field. The majority represented the banking and leading commercial interests of the country.

President Hegeman presided, delivering a very happy opening address. There were also addresses by many, including Commander Robert E. Peary, Hon. James V. Barry, Insurance Commissioner of Michigan, and Hon. Alfred Hurrell, counsel of the New York Insurance Department, representing Superintendent Hotchkiss. Mr. Hurrell, speaking for the New York Insurance Department, said in part:

I very much appreciate, gentlemen, the remarks of the president of this company, especially as he tendered his appreciation and the company's appreciation to the men who had worked with him and builded this tower. If there is one thing that appeals to men, it is to know that other men for whom they have worked receive that gracious gratitude which this company has tendered to the builders of this building, tonight. I am sure that that again is typical of the Metropolitan Life Insurance Company. It is another attribute that stamps the company and its officers and managers as really great. I cannot help but think of this tower, the completion of which is commemorated here to-night as altogether typical of this company. It is solid, it is great, it is clean. * * *

Now this company, in my humble judgment, is one of the leaders in the insurance world. It is a company which has combined business and philanthropy, and in doing that it has led the way which in the course of time will be followed by other companies. * * *

Just one word more and I am through. I feel that this is an occasion in which it may properly be stated as the superintendent has stated it to me, that the City of New York is proud of a successful insurance company of this kind. This City of New York certainly ought to be, the State of New York ought to be, and the in-

surance department is, and what makes it? It is this, that the Insurance Department, without stretching the imagination or trying to say pleasant things, is pleased to acknowledge that in every matter in which the officers act, they seek to act strictly within the law and strictly within the wishes of the department. * * *

I want to say to you that I hope the tower will always be typical of the company, that it will be like a cloud by day, and a pillar of fire by night, inviting you by compelling force, to keep this company in the front ranks of insurance interests, to keep it high as its business standard, and to make it, as far as you can, completely useful to the people.

Eminent Guests Do Homage.

There were many lessons to be learned from such an assemblage on such an occasion. Pre-eminent was the array of distinguished men, high officials of States and municipalities, bankers, insurance officials, clergymen and leading professional men of the entire country, practically all of whom were there to do homage to the one man who, above all others, was mainly responsible for building the great company which became responsible for so great and beautiful a building.

The recognition and appreciation of the architectural perfection of the structure were the occasion for the banquet; but, as expressed by many of the prominent guests, they were there to take advantage of the opportunity thus given them to honor, by their personal attendance, the man who had done so much for the uplift of humanity, John R. Hegeman, the first secretary and now the head of the Metropolitan. This was heard upon all sides and was a spontaneous expression of a common sentiment of loyalty, confidence and admiration, on behalf of one who has by marvelous astuteness, unremitting application and the very essence of gentleness and unwillingness to injure, realized in his life and lifework more completely, perhaps, than any other of this age and nation, those words of Holy Writ: "Be ye as wise as serpents, but harmless as doves."

The President's Address.

The opening address of President Hegeman is at once brimming over with wit, sentiment and forcefulness. It appears in print in full for the first time, and is as follows:

Distinguished Guests, Fellow Officers, Comrades of the Field Staff—Gentlemen: No, I apologize; you are not all gentlemen; some of you are ladies. For (looking up at the boxes),

we must not forget that many of our blessings, like those from the gracious hand of Providence, come from above.

I have sat here for the last hour, or more, deploring the responsibilities of the presiding officer—for which I am so inadequately equipped—and feeling like the boy who got as near to the schoolroom as the doorsteps and there he lingered. The teacher finally went to him and said: "Johnny, why don't you come in?" And Johnny answered: "Teacher, that's what I've been thinkin' about for the last hour, and the more I think of it the sicker I git."

You recall an occurrence in the political history of one of the Western States, when a certain gentleman, running for gubernatorial honors, unwisely began his campaign with a speech. But he made only one, for his campaign manager immediately sent him a wire, more luminous than voluminous, saying, "Dear Colonel, don't talk." I wish that a round robin might be sent to me signed by every lady and every gentleman in this room, saying, "Dear Hegeman, don't talk," for then I would have two good things—some first-rate advice and a splendid collection of autograph signatures.

Had All the Diseases of Childhood.

But, to leave pleasantries of this nature, let me preface my remarks by saying that a very agreeable duty falls to me at the outset in giving sincere expression to the good feeling, the good fellowship, which, on behalf of the directors and officers of the company, I am authorized to extend to the distinguished guests whose presence honors our hospitality.

The invitations you were good enough to accept made reference, among other things, to the completion of the Company's Home Office Building, including what has come to be popularly known as the "Great Tower on Madison Square"; but perhaps I may trespass upon your politeness long enough to give a brief retrospect to some of the circumstances which antedated its erection.

Some years ago, as many of you will remember, we occupied two rooms at 319 Broadway, and, in the parlance of the day, had space to burn. The total marketable assets were then a few hundred thousand dollars—some-what less than the present average daily receipts. A little later we gave up boarding and went to housekeeping in our own home in the Wilson G. Hunt Building at Park Place and Church street. The company was young and weak. It had come into being with a host of others, born during the inflation years immediately following the Civil War, most of the others being long since in their graves. We had all the diseases incident to childhood, including fits—especially fits—when old Gen. Davis, the landlord, came in four times a year to collect the rent. It seemed as though he came in four times a month. Ah! it was a hard job to draw the check, a harder one to sign it and hardest of all to hand it over.

The Real Root of Evil.

The old and established companies were forging ahead—that is, forging for those days, ludicrous now—and the chasm was constantly widening between our accomplishments and their achievements.

It was a long, hard struggle for the right to live. We realized as never before the truth of the old proverb that the lack of money is the root of all evil.

I recall vividly an event during this period, akin to others of a like nature, when a claimant called to collect a death claim. I left him with the president, Mr. Knapp, of blessed memory, and while he consumed the time with cheerful observations on the state of trade, international complications, the binomial theorem and the differential calculus, I slipped down to the bank to borrow the money to take up the policy. We then paid ninety days after the filing of proofs. We often wished that the claimant was down in South Africa, shooting lions or otherwise engaged, so that the papers might be delayed—otherwise we tried hard to be prompt and not overrun the 50th second of the 24th hour of the 89th day; and occasionally we succeeded.

Examinations Became Fashionable.

Official examinations by insurance departments then became fashionable, and we fell into the fashion. One Commissioner had us down for a receivership and the receiver was decided upon—by him—though he did not know we knew it. It came to us by accident. At the first interview thereafter we led him aside and quoted Halleck's well-worn lines:

"One of the few, the immortal names,
That are not born to die."

With much indignation he asked what we meant and we told him "nothing"—only, it was good poetry and we always felt that Halleck had written it in anticipation of the Metropolitan's career. The receiver was not appointed.

Tribute to McCall.

Then came John A. McCall, of the New York Department, whose memory I cherish as that of an able and accomplished official and an honest and honorable man. His belt was hung with scalps. He had pronounced a requiem over half a dozen or more companies. He was of Celtic extraction and he had red hair and the combination was ominous. The first day, at noon, we asked him and his associate examiner if they would take lunch with us. He answered with as emphatic and eloquent a "No" as ever it was my painful pleasure to hear. The second day we repeated it, and the Noes again defeated the motion. On the third day, however, Mr. McCall voluntarily came forward and said, "We will go out to lunch with you to-day, and we will go every day we are here." Asked the reason for this sudden conversion, he said, "You may be small and you may be weak, but we have gone far enough to know that honest men are at the head of this institution, and you are going to live if it rests with us." He saw the lines we had laid down—he discerned the spirit that animated us—he perceived how things were developing—

and he gave credit for certain assets not expressed by the dollar mark.

State Supervision Better Than Ever.

Later on the doctors kept coming, but the patient survived—a tribute alike to inherent virtue and to State supervision. I may here add, parenthetically, that I have known most of the Superintendents and Commissioners of Insurance for the last forty years. There never was so many good and able men in those offices as there are to-day. And some of the very best of them are in this room to-night. They were not hesitant in accepting our hospitality because they and we know two facts—first, that there is not a thing in the world we want of them, not one; and, second, there is not a thing in the world they want of us; except—as to both sides—good will, mutual confidence and honest co-operation.

And now we have reached 1890. In that year, recognizing our limitations downtown, we came up and laid the corner-stone of 1 Madison avenue, occupying the building in 1893. From time to time we added to this structure until we secured the last of the block, Dr. Parkhurst's church, and with that the construction of the 700-foot campanile was begun.

What the Tower Represents.

Being completed we are now brought face to face with the Great Tower. To-night we give it dedication; and here and now, in holier words than mine, we dedicate it, and the great building of which it is the fitting climax, to "whatsoever things are honest; whatsoever things are just; whatsoever things are pure; whatsoever things are of good report," in the grand business for which it was conceived, designed and completed. May its whiteness be symbolic of the purity of every motive that shall guide the company's administration; may its massive steel and iron columns and beams and girders and braces typify the strength and solidity of the institution; and may the everlasting bed-rock upon which it rests be emblematic of the sure foundation upon which its business shall forever and forever stand.

Yea, for countless ages, may the earliest dawn of the morning sun illumine its golden summit and the parting rays of evening twilight linger upon its peak; but may he who beholds it see, not the mere structure itself, but the company behind it; and may the beneficent work of that company survive long, long after its marble tower shall have crumbled into dust.

What Made the Tower Possible.

But, if I am not trespassing too much upon your patience, may we not appropriately ask what really is behind the tower and briefly answer it. In the epigrammatic words of our good friend and neighbor, Dr. Parkhurst, let us "lift the lid" and look within. The gentlemen before me are keen observers of the rise and progress of the leading institutions of the city and country, but their knowledge, in the main, can only be general. At the company's annual convention of superintendents held this week the report for 1909 was presented, and if you will permit me I will mention in round numbers a few salient points.

The income for the year was \$85,000,000.

Of this amount \$16,000,000 were collected from 10,000,000 policyholders, the average collection being a little under 10 cents per week. These belong to our industrial department, whose thirtieth anniversary we celebrate to-night.

The claims, bonuses, dividends, etc., paid to policyholders, plus the amount set aside on their behalf, was \$56,000,000 for the year.

The assets were \$277,000.

The surplus we keep down to about 10 per cent. of the assets—giving the rest to policyholders in the form of bonuses.

The number of outstanding policies is 10,600,000.

The amount of outstanding insurance, the largest of any company in the world, is \$2,042,000,000.

The number of death claims paid in 1909 was 138,576; distributed over the business hours of the day this is about one per minute.

The bonuses to industrial policyholders, payable in 1910, over and above any and all obligations expressed or implied in their contracts, amount to \$5,250,000.

On a turnover of \$85,000,000, \$140,000 was paid to stockholders as a dividend, the rate being limited by their own voluntary act to 7 per cent. per annum, and the amount of said stockholders' dividend being less than one-tenth of the interest earned by the surplus.

The amount gratuitously given to the non-participating industrial policyholders, above all policy obligations, during the last seventeen years has been \$25,000,000.

Can Always Say More About Metropolitan.

I might go on with many more interesting facts, but I could hardly have said less than I have. Daniel Webster was once dining with a lady, when she said: "Mr. Webster, I suppose your appetite varies; sometimes you eat more and sometimes less"; to which the immortal Daniel replied: "No, madam; I often eat more, but I never eat less." So I repeat, when we come to talk about the Metropolitan we can always say more, but we can never say less.

And now, may I refer briefly to a few among various features, some peculiar to ourselves, connected with our operations and ambitions? As you perhaps know, we have a working force of more than 14,000—of whom over 11,000 devoted workers are on the field staff under the 400 trusty leaders who are with us to-night—and 3,000 faithful employees are on the home office staff. The latter are dined every day, of course, at the company's expense. Then there is a gymnasium, with an instructor, open to all the clerks. The girls have the use of the company's assembly room, a large hall, capable of seating 1,000 or more, for recreation purposes, and the male glee club, who have sung so finely for us this evening, likewise utilize it. The roof of the main building is also used for games and other forms of recreation. We are establishing a circulating library of many thousand volumes, for the sole use of our employees. Briefly, we are doing everything we can think of for the health, happiness and contentment of our employees.

"LIFE EXTENSION."

(Remarks made by John K. Gore, actuary of the Prudential Insurance Company, and president of the Actuarial Society of America, in leading the discussion on the subject of "Movement to Prolong Life," at the third annual meeting of the Association of Life Insurance Presidents at the New Willard Hotel, Washington, D. C., last Thursday.)

Mr. Chairman: We are indeed fortunate to have heard three such valuable addresses as have been delivered here this morning. The conservation of public health and the prolongation of human life are subjects of such vast importance and these addresses are so suggestive, so helpful and so practical that I trust they may have the widest circulation.

Results Achieved.

The results already achieved by the Public Health and Marine Hospital Service, as outlined by Surgeon General Wyman and referred to both by Dr. Rosenau and by Dr. Dwight, and the still greater work yet to be accomplished by this department directly and through its influence are revelations to most of us. Dr. Rosenau's paper is full of information and pregnant with the most valuable suggestions, and the fact that by his manner of presenting the subject he has made it so intensely interesting stamps the paper as one of the most important and effective yet written upon the conservation of public health. I wish its contents could be known to every citizen in the land. Dr. Dwight's paper reveals powers and possibilities now lying almost dormant in the life insurance companies that if properly and judiciously utilized could be made a more efficient agency for improved public health than any other single factor.

In addition to the papers presented here to-day this association still has before it Professor Fisher's able paper on the "Economic Aspect of Lengthening Human Life," and also Dr. Foster's plan for the free periodical medical examination of policyholders, which has already been adopted by at least one company.

A Limit To Company Activity.

Chairman Ide, of the committee appointed by the association to consider the suggestions of Professor Fisher and Dr. Foster, has made clear in his report that any extensive concerted action on the part of the life insurance companies involving the expenditure of large sums of money is improbable. The company's charters and the laws of many of the States seem to most executive offi-

cers to prohibit the carrying out of some of the suggestions that would apparently be most far-reaching in their results. As Mr. Ide told us, certain individual companies are already endeavoring to prolong their policyholders' lives. In addition to the companies referred to by him there are a number of others that have distributed to their policyholders valuable information and instructions regarding personal health and hygiene. One industrial company distributed years ago, among others, hundreds of thousands of copies of a pamphlet on the care of infants.

A Long Fight Ahead.

It is well to remember that the fight to conserve public health and to prolong human life is to be a long one—as long as time itself. It usually requires more money, more time and more intelligent effort to force a community death rate from twenty per thousand down to sixteen than to force it from fifty down to twenty. Moreover, we must realize that an apparent decrease in the rate of death from any one disease does not produce a corresponding decrease in the general rate. If the average death rate in a community is, say, twenty, and if one-fourth of all the deaths are caused by tuberculosis, it does not follow that the absolute eradication of that disease would reduce the general rate one-fourth. A large percentage of those who become victims of tuberculosis are constitutionally weak and would soon have succumbed to some other disease had tuberculosis been annihilated. In fact, the partial overcoming of any important cause of death brings other diseases not only into greater relative prominence but also to a certain extent into greater real prominence.

I would not for a moment minimize the magnificent work that is being accomplished nor utter a single discouraging word as to the plans now going forward for improved public health. The value of it all as a dominant influence in the future of our nation is almost beyond our comprehension. It will be only a hindrance to the development of the movement, however, if we are led to expect too great results within a limited time. The struggle is to be a hard one. Every little advantage gained must be fought for—lost perhaps and fought for again—but it is all worth while for it means eventually a happy, efficient people and the saving of thousands and thousands of lives to the family and to the State.

After listening to Dr. Dwight's paper one is led to the belief that the doctor has in mind some plan, the details of which would occupy more

time than he feels should be given to his subject in a meeting of this kind. If such is the case, I trust the executive committee of this association will endeavor in the very near future to learn Dr. Dwight's ideas and have them thoroughly considered.

Spreading The Gospel of Prevention.

The possibility of spreading the gospel of preventive medicine and good health by means of a body of trained men, very conservatively estimated as 100,000 in number, without the expenditure of a dollar of the policyholders' money—do you realize what a stupendous proposition that is? If suggestions are permissible I would recommend that this association appoint a committee from its members to confer with the committees of the Medical Directors Association and the Actuarial Society of America in regard to the investigation now being carried on by those two bodies to ascertain whether or not the results may be made available for the purpose outlined by Dr. Dwight. I also venture to suggest that these three committees be requested jointly to take up with Dr. Dwight the details of the plan he has in mind and to report to this association upon its feasibility.

Whatever may be the results of the deliberations of this joint committee, it or a similar committee would be well qualified to supervise the systematic distribution by this association through the companies of carefully chosen printed matter that would advance the cause of public health. The beneficial work that has been done by the life insurance companies individually and on their own initiative, is indeed important, but the moral and physical effect of all or of a great majority of the companies acting uniformly with a common purpose and with the same instrument would be tremendous.

VANDERBILT AND OLD AGE PENSIONS.

At last a Vanderbilt of the fourth generation has entered the directorate of the New York Central, William K. Vanderbilt, Jr., having been chosen a few days ago to fill one of the vacancies recently occurring in that directorate. He is of the fourth generation from the creator of the New York Central system, and is considerably older than two of his uncles were when they entered the New York Central board.

He is understood to warmly approve the purpose of the New York Central management to provide a pension fund and system, so that superannuated employees may rest assured that when the time for their retirement comes they will be provided for. But it is the common belief that this purpose for which the Central management has as a beginning set apart nearly five hundred thousand dollars represents the earnest belief of President Brown, both in the expediency and in the justice of old age pensions, for employees of long service. The details of the plan were

worked out by President Brown; they resemble the plan adopted by the Pennsylvania Railroad, and are almost identical with the system recently approved by the Rock Island management. In some of its features the plan is similar to that established by James Stillman for the employees of the National City Bank.

Only One Tread.

The greater minds in our corporate managements are now convinced that pensions and an equitable opportunity for profit sharing, involving stock ownership, will ultimately be adopted by the great majority of American corporate bodies. The argument has never been better stated than by Geo. W. Perkins, who worked out in detail the plan by which profit sharing, based upon stock ownership, has brought large numbers of the employees of the United States Steel and the International Harvester Company into the relation of proprietorship to these associations.

A number of years ago Henry B. Plant, founder of the railway and express systems which bore his name, inaugurated the first profit sharing

plan among transportation employees and from this foresight great results have followed, the most prominent of which is that he never had a strike among his employees.

CRUELTY TO PROMOTERS.

Insurance Commissioner McComb, of Oklahoma, has ruled that no company will be licensed to do business in that State that has a contract with promoters for the further sale of capital stock. He will not permit a company to hold as a liability any contract that it may have had with a promoting organization. He insists that the further sale of capital stock of an insurance company that is writing business must be under the direct control of the company.

There were seven stock insurance companies chartered in 1909, four each of \$1,000,000 authorized capitalization and three of \$500,000 each. Only one of these companies has been granted a license by the Insurance Commissioner. The other six companies are chartered and are selling stock in large quantities, but have not obtained a permit to do insurance business.

IN NEW ENGLAND

NEW ENGLAND MUTUAL LIFE HAS RECORD YEAR OF PROSPERITY.

At the annual meeting of the New England Mutual Life of Boston, held Monday last, Warren Sawyer, Henry Parkman, Wallace L. Pierce and Charles E. Cotting were elected directors for three years.

The sixty-ninth annual report of the directors for the year ended December 31, 1909, stated that the year therein reviewed "has been the most prosperous one in the history of the company, the net gain of insurance in force being twice that of the previous year; the death losses and surrenders of policies have decreased, notwithstanding the increase of the total amount at risk. The mortality of the past year has been 57 per cent. of the tabular expectation."

During the year 8,796 policies were issued to the amount \$23,427,325; terminations caused by death, maturity, surrender, lapse and expiration, \$10,848,411. The amount of insurance paid for and in force January 1 was \$197,492,772, an increase of \$12,578,914. Policyholders received from losses, matured endowments, surrender values, distribution of surplus, etc., \$4,710,055.93.

The gross assets of the company December 31, 1909, amounted to \$51,259,876.61; policy reserve and other liabilities, \$47,096,033.41. The net surplus over all liabilities of every name and nature is \$4,173,843.20.

At the directors' meeting Tuesday the board of administrative officers, headed by President Foster and Vice-President Appel, was re-elected for a continuance of its faithful and capable service.

Burton H. Wright Elected President State Mutual Life.

Following the voluntary retirement, after well matured consideration of Colonel A. G. Bullock from the presidency of the State Mutual Life of Worcester, Mass., that office has been conferred upon Burton H. Wright, a gentleman who has deserved well of the company by reason of 31 years of faithful and capable service, rising gradually from the position of clerk at the home office to his present eminence. President Wright will be seconded by the following gentlemen, elected at the annual meeting of the board of directors last week: Colonel Bullock, who continues in the company's service as first vice-president and chairman of the board of directors and the finance committee; vice-

presidents, H. M. Witter and George F. Blake; secretary, D. W. Carter; treasurer, G. W. Mackintire; general counsel, Chandler Bullock; actuary, C. R. Fitzgerald; medical director, Dr. Albert Wood; assistant medical director, Dr. Homer Gage; superintendent of agencies, Edgar C. Fowler. Mr. Carter's well deserved promotion from assistant secretary to secretary fills the vacancy caused by the advancement of Mr. Wright.

The State Mutual did exceedingly well in 1909, writing over \$16,579,000 of new business and gaining more than \$2,000,000 over the 1908 figure of its assets. A continuation of favorable results is assured under the capable care of the new administration.

Massachusetts Legislature.

Bills have been prepared and placed in the hands of the Massachusetts Legislative Insurance Committee, covering all the recommendations submitted by Insurance Commissioner Hardison (printed serialim in "The Chronicle" of January 13), except Nos. 1 and 10. Hearings have been held and completed on Nos. 6 and 11 of these recommendations; there will be a continued hearing February 8 on No. 4, and a hearing on February 15 on No. 3 of said recommendations.

Petitions have been presented in the Massachusetts House as follows:

Of Mayor Hibbard, of Boston, to authorize an appropriation of \$1,000,000 in the next six years for the installation of a high pressure fire service.

Of Mayor Hibbard, to authorize cities and towns of more than 5,000 inhabitants to establish homes or hospitals for consumptives.

Of George H. Ellis, to provide for the establishment of a State Insurance fund, to be used to reimburse and assist any State institution which suffers loss from fire.

Of Alonzo Rothschild, to require railroad companies to guard against the emission of fire and sparks from their locomotives.

Maine Insurance Company.

At the second annual meeting of the Maine (fire) Insurance Company these officers were elected: P. P. Gilmore, of Bucksport, president; David E. Moulton, Portland, treasurer; Horace Purinton, Waterville, and Nathan M. Jones, Bangor, secretaries. The company received in premiums for 1909 \$75,880, as against \$42,860 in 1908.

Massachusetts Bonding.

The Massachusetts Bonding & Insurance Company had an excellent year in 1909, as shown by the report

of President Falvey, at the annual meeting of the company, at which the old officers and directors were re-elected. Seldom has so young an institution so quickly acquired a substantial and well-founded prosperity as has the Massachusetts Bonding.

New England Briefities.

Colonel E. C. Benton, of John C. Paige & Co., Boston, and Mrs. Benton celebrated their silver wedding anniversary Monday evening at their spacious mansion on Oakley Road, Belmont, and received the congratulations of numerous friends.

A new combination fire auto has been received by the Boston fire department, and will be stationed at the Forest Hills fire house when that is completed. It is expected that it will give the Forest Hills district the long-needed additional protection.

J. W. Cottrell heretofore in the service of the National Fire, of Hartford, has become special agent for part of New England of the Hartford Fire, filling the vacancy caused by the acquisition of H. M. Fenton by the L. & L. & G.

The Brotherhood Health & Accident Company, capital \$100,000, has been licensed in Massachusetts. C. S. Powell is president and general manager of the company.

All securities valued as of Dec. 31, 1907.

Agencies in all Prominent Cities & Towns.

FROM MISSOURI.

St. Louis, January 26 (Special).—A severe check to the operations of the wily promoter of insurance companies, in Missouri at least, is the ruling by Insurance Superintendent Blake that in future he will require the written consent of stockholders of new insurance companies to the payment of expenditures incurred by promoters.

He holds that several companies have been organized by men whose only interest was their commissions in the sale of stock and who were not careful as to representations made as to future profits, or the amount of surplus they left for the maintenance of the organization.

Copies Chicago Convivials.

St. Louis fire insurance agents have planned a series of monthly banquets on the order of the monthly luncheons of the Chicago Board of Underwriters. The first was held last week at the Jefferson Hotel with Charles L. Crane as toastmaster, who has named John R. Goodall to preside next month. Each toastmaster appoints his successor, who fixes the time, place and program of the function, an innovation which is most admirably designed as a preventive of the usual bickerings, a hitherto inevitable issue of these sodalities.

DECIDE TO INCREASE CAPITAL STOCK.

The fortieth annual meeting of stockholders of the New Hampshire Fire Insurance Company was held at the home office of the company Tuesday, at which meeting was presented the usual reports of the finance committee covering the transactions of the year ending December 31.

A resolution to increase the capital stock \$100,000 to \$1,200,000 was also presented and adopted. The names of Samuel K. Bell and George P. Crafts were added to the list of directors to fill vacancies of the old board, which together with the present staff of officers were re-elected.

The company's assets are now \$5,196,017, an increase of \$334,000, while the net surplus is increased \$101,000 to \$1,510,064. The contingent reserves now amount to \$350,000.

If the merger of the Fidelity Fire Insurance Company and the Phenix Insurance Company, of Brooklyn, had taken place on the first of January, instead of the day now set, the combined assets of the new company would have been \$14,081,389, and the surplus to policyholders \$5,031,951.

THIRTY-SEVEN YEARS OF CONTINUOUS GROWTH.

The sixtieth annual report of the "old and tried" Glens Falls Insurance Company, of which J. L. Cunningham is president, with its usual promptness, is at hand. The statement calls for little comment. For thirty-seven years this institution has been steadily increasing its net surplus from year to year until to-day the unearned premium fund on the New York standard is \$2,114,779, and the net surplus over all liabilities is \$2,433,826.

While President Cunningham has gained considerable fame for his witty and terse sayings, it must be said that his reputation as a competent and conservative underwriter, in view of the statement published in this issue, far exceeds all his other qualifications.

SEVENTY-FOURTH YEAR.

The seventy-third annual statement of the Westchester Fire Insurance Company, of which John R. Crawford is president, gives that well-tried institution total assets of \$4,462,134, with a surplus over all liabilities of \$1,431,780. An examination of the statement, as published in this issue, will soon satisfy any reader as to the impregnable security of the company.

ENDORSE THE KANSAS LAW.

The local agents of Kansas have adopted the following resolution endorsing the anti-discrimination law of that State:

We, the undersigned, local fire insurance agents in Kansas City, Kan., having experienced some six months' operation of the Kansas law for the regulation and control of insurance rates, believe as follows:

First—That its tendency is to straighten out friction between the assured and the insurance companies.

Second—That it eliminates objectionable underwriting practices and places the business on a basis where merit counts.

Third—That it gives a solid value and a staple price to every insurance policy issued in the State.

Fourth—That it assures the agent a just compensation for his services.

CREDIT MEN ACT.

John D. Russell, chairman of the fire committee of the National Association of Credit Men, has addressed a letter to the officers of all the affiliated branches, urging that vigorous efforts be put forth this year to assist in reducing the enormous fire waste of the country. He asks each local association to appoint a committee to grapple with the situation in their territory. He says it is their duty to insist that the fire-rating bureaus which the insurance companies maintain, be made a positive force for correcting dangerous conditions.

Can Phenix Remain in Union?

EVANS SAYS IT WILL.

No time since the trying days following the San Francisco fire has seen as much unrest and foreboding in the West as the present. As the weeks roll by since the first disclosures about the Phenix of Brooklyn and nobody is able to give any definite information on several subjects of great importance to many people, the tension is growing severe. At first some agents were scared, but assurances from headquarters that the company was solvent and that it would not retire from the Western Union quickly satisfied most of them. Other managers forebore to take advantage of the unfortunate situation in which the company found itself, mostly because of their strong feeling of friendship for J. H. Lenehan, the Western manager. Field men, with similar feelings for the field men of the Phenix, also resisted temptation to gain advantages at their expense. Business continued to come in and there was little to indicate that anything unusual had happened.

Neither Flesh Nor Fowl.

But uncertainty cannot exist indefinitely without having some effect. There have been authentic reports of the coming merger of the Phenix and the non-union Fidelity, of the coming organization of the Fidelity Underwriters, backed by the Continental and the Fidelity-Phenix, a peculiar union and non-union combination, such as never has existed before and perhaps cannot exist under union rules. Local agents want to know a number of things. They propound to their special agents many questions, which they are utterly unable to answer. To the agents this situation is very trying. They are mostly conducting union agencies. Should conditions arise which would force the retirement of the Phenix from the union, very many of the agents will have to give the company up. They do not want to do this unless it is necessary, as no company is more popular with the agents than is the Phenix. At the same time, they do not want to keep putting business into it if they are going to lose the company and have their expirations exposed to another agent. Many of them find themselves in a serious quandary and unable to get any light which will help them out of it.

Managers Also at Sea.

Managers are watching the situation with even more interest than are the local agents. While they are show-

ing great forbearance, they are preparing for trouble. It is currently reported in Chicago that one company has secured a list of the agents of the Phenix, got as much information about each as possible and placed this information in the hands of its field men with instructions not to use it unless they get telegraphic orders, and then to get busy.

Of course, the managers have been discussing all the possibilities of the situation among themselves, and from the unanimity with which they express certain opinions there is every reason to believe they are getting a definite plan of action mapped out.

Will Evans Be President?

Aside from the question of the status of the Fidelity Underwriters, there is the larger question of what will happen if Henry Evans becomes president of the Fidelity-Phenix. Unless he should apply for union membership, which would imply the Continental's becoming a union company, a situation would be produced which could not last more than a very short time. The presidency of a union company held by the president of the strongest non-union company is almost unthinkable. Should such a situation arise, there apparently would be nothing for the union to do but to ask Mr. Lenehan as the Fidelity-Phenix representative in the union to resign his membership, unless he should save the union the embarrassment of such action by resigning voluntarily. It is not likely that Mr. Lenehan has been telling people what he would do under circumstances which might arise, but those who know the man best are sure that he will not embarrass his friends.

Evans Holds a Strong Hand.

There are those who have volunteered the opinion that Mr. Evans is shaping things so that the union will have to throw the Phenix out or stultify itself, and it is not likely to do the latter. To have the company thrown out would place him in the position of one who had come to the rescue of a union company in trouble, had done it and the business generally a great service and had been rewarded by having the company expelled and its field arrangements upset. That would sound good to many people and create considerable feeling against the union. This is mere conjecture, as nobody but Mr. Evans knows his motives; but if such were his plans, Mr. Lenehan's voluntary retirement from

the union would interfere seriously with them. Then the Fidelity-Phenix would have to stay out of the union of its own accord or some other representative of it would have to apply for union membership. Such an application would imply acceptance of union rules and, if Mr. Evans were president of both companies, the rules would probably be construed to require the membership of representatives of both companies or of neither.

If Evans Embraces the Union?

There appears to be a disposition on the part of union managers to grant unusual concessions, should Mr. Evans see fit to seek them as the price of his becoming a member of the union. They would doubtless give him time to rearrange the Continental's agency plant and help him as much as possible, but they do not talk as if they would surrender any union principles. They do not see why they should. They do not appear at all inclined to concede that one man is wiser than all who have combined to work out the present union scheme, that they have been wrong all these years and the Continental right. There probably is not a union manager who has not the highest admiration for the Continental as a great well managed company and of Mr. Evans as a great executive; but the union has gotten along without him a long time, and done pretty well, and its members do not see why it will not continue to do so, regardless of what course Mr. Evans may pursue. Union managers would hate to part company with the Phenix, but there have been partings before and the union has not gone to pieces.

Some Prophecies.

Of course such a company as the Phenix added to the non-union ranks

1860 49th YEAR 1909

HOME LIFE

Insurance Company of New York.

GEORGE E. IDE, President.

Assets	\$21,708,901.70
Liabilities	\$20,471,723.76
(Including Deferred Dividend Fund)	
Dividend Endowment Fund	\$1,704,463.00
(Deferred Dividends)	\$1,970,463.00
Net Surplus	\$1,237,177.94
Insurance in Force	\$38,368,244.00

The Record for 1908 shows the following GAINS:

Insurance in Force	\$2,174,947.00
Assets	\$1,704,048.00
Deferred Dividend Reserve	\$175,443.00
Contingency Reserve (Surplus)	\$467,742.51

would increase the capacity of non-union agencies, but its retirement from the union would leave a better place in many an agency for other union companies and it would crowd into second place many non-union companies that now hold first place in agencies. Union managers intimate that it is for managers of non-union companies, not for them, to worry. If the Continental should come into the union, union managers recognize that it would crowd their companies in many places, but it would cause the unionization of many non-union agencies because a number of leading non-union companies would be thrown out of agencies when they unionized. On the other hand it is not likely that if the Phenix should go out of the union it would result in many important agencies becoming mixed or non-union. The Phenix is a splendid agency company, but it is only one among many in its class, while the Continental and the companies which will follow it constitute a large part of the non-union companies which are really liberal writers and help agents to carry their large lines.

Will Evans "Go It Alone?"

Some of the union managers feel that if a struggle should come, they would act together as a fairly compact body. On the other side would be Henry Evans alone, for there is no concert of action among non-union companies. Furthermore, the non-union companies have felt the heavy hand of the giant of their class as it has forced its way to the front, and they are not unanimous in the opinion that its interest and theirs are identical.

To the onlooker who has no interests at stake this is the most interesting situation that has developed in the West in many a year. Whether there is to be the greatest fight of a decade or the greatest movement toward co-operation, nobody can tell. But anybody who knows even a little about the business can see that the next few months are going to leave their mark on fire insurance in the West.

ITS ONE HUNDRED AND EIGHTEENTH ANNUAL STATEMENT.

Total assets of \$27,307,672.28, including a reinsurance reserve of \$10,244,415 and a net surplus of \$11,182,836.96 are shown in the impressive annual statement of the Home Insurance Company, of New York. The Home has made striking gains during the past year and the exhibit made will still further increase its popularity with property owners and agents.

THE DISORDERLY BURGLARY SET.

To the very hour of convention of burglary underwriters in New York last Friday gentle white winged peace was on her throne, every prospect was pleasing and only man was vile.

Then came the frost and the blighting blast and the tender buds of that confidence plant of such desperately slow growth were nipped and killed and now the faithful few can only gird up their faith anew and await for the passing of the assyrians.

There are members in the association with whom hope springs eternal. There are others who stay simply because they don't like the imputation of quitters, based upon a pretty well verified number of incidents that have given rise to what may be called a conclusive conviction that God hates and punishes a quitter. And so the organization goes rambling along. It has done good work, in a measure, but its piloting has been largely directed by dictatorial and dominating influences that is keenly and consciencelessly alert to private and individual advantage. It can do good work in future if the community principle of building enduringly is recognized and nailed fast and hard to the lintels of its doorways.

Comparisons are "odorous," but sometimes illuminative. For the purpose of acquiring an abstract as well as an academic idea of the situation the burglary returns in the annual statements of the companies, under frequent changes for several years past, is urgently commended. Then of you know how to apply knowledge acquired so as to extract the toxins of wisdom, you may see and understand the source of all this absurd and ridiculous cheap bidding for press agents' notoriety.

Chicago Rumbling.

Chicago is particularly incensed over the association's failure to conclude the unsettled rate and commission conditions existing there. Here is the way one of the best informed men in the Chicago "street" expresses his views:

"Just learned action of Burglary Insurance Underwriters Association on Chicago. I don't think it will satisfy anybody here. Few, if any, want to pay 30 per cent. to class 1 agents on residence burglary. Even the proposal last summer to pay them 25 per cent. was unsatisfactory. Some general agents don't want to pay over 20 per cent. Naturally this don't suit Quint, as it gives him no differential against fire agents. I think the companies will hear something from Chicago."

And thus the destructive internecine warfare goes on and the end is not even approximable.

With the entry of at least three new companies in the burglary field in the near future the situation will be further complicated and only the strong firm hand of an effective organization can "spank" the unruly youngsters into being on their good behavior.

Unruliness is an incident of youth that the older heads must take into consideration. Hazing may never be abolished, and perhaps is a healthy part of the unwritten curriculum of the college of underwriting.

At the special meeting of the stockholders of the Phenix Insurance Company, held at the home office of the company, 16 Court street, Brooklyn, on Monday last, the proposed merger of that company with the Fidelity Fire Insurance Company was approved by a vote of over 26,000 shares out of a total of 30,000 shares outstanding.

LIABILITY PROBLEMS AND POVERTY.

By Dr. Edward T. Devine, Editor
"The Survey."

Lack of employment is probably in America the least important of all the recognized chronic causes of dependence. Well nigh the most important of these causes, on the other hand, is the destruction of life and undermining of health for which industry is primarily responsible. The demand for labor, skilled and unskilled, is active and persistent and tends under modern industrial developments to become less seasonal and more dependable. We have made less headway in reducing the injuries and risks which industry imposes on industrial workers.

In holding industry responsible for the injurious effects of the employment of children and women; for the accidents which cripple and kill, leaving women and children dependent upon charity; for employment of young people in "dead-end" occupations, robbing them of the fruitful years of preparation for a suitable lifelong occupation, for the congestion of population in cities where employment is to be had, and in the most crowded parts of those cities, and thus indirectly for the major part of the evil effects of bad living conditions, as well as for those of bad working conditions—in holding industry responsible for these really potent causes of dependence—we are but recognizing facts as they are, placing responsibility where alone effective control actually resides. We are rightly accustomed to acknowledge, in this country, the domination of captains of industry. They have had and have power, influence, opportunity, pecuniary rewards, all but unrestricted control of the destinies of the industrial population. They have given a good account of their stewardship so far as product is concerned. Is there any one who will claim as much for the results of their social control?

The Human Equation Inevitable.

When we take up questions relating to the employment of labor we are prone to appeal to economic forces and the demands of industry as if these were strictly impersonal, almost supernatural things, beyond human control, and scarcely suitable subjects even for human inquiry. What we overlook is that each factory is in turn put up by individual human beings acting for themselves or as agents for stockholders; that some one selects the site and is thus responsible for putting it where labor is abundant and therefore probably "congested," or elsewhere; that some one

decides how to equip the factory, what ventilation and light are to be provided, and finally whether men, women or children are to be employed, and even what particular persons. This selection of labor and the process of coming to terms with those to whom employment is offered, may indeed be turned over as one of the less important items of administration to subordinate superintendents but the officers and directors, the owners and stockholders, are none the less responsible ultimately because they choose to act through agents. Unless business men wish to put themselves in the position of being willing to exploit weakness and ignorance for their own gain it is incumbent on them to conduct their enterprises in such a way that the health, strength and character of their employes are conserved and not destroyed. They must refuse to employ children even if they are cheap. They must refuse to employ women at tasks for which they are physically unfit. They must not permit overwork of men or women. They must refuse to employ women immediately before or immediately after childbirth. They must limit the speed of machines when the point is reached at which speeding is directly injurious. They must not permit "accidents"—often only a misnomer for the clearly foreseeable results of neglect to provide well known safeguards. They must minimize the risks of dangerous occupations. They must pay living wages. In a word, they must take into account in all their plans the social welfare of their employes, as well as their own financial welfare.

Natural High Instinct vs. Stupid Greed.

Many employers have always done these things, not from external compulsion, but from a more or less clear recognition of their own natural obligations. On the face of it, there is nothing inherently unreasonable in expecting employers to establish and maintain such conditions in their establishments as would bear the searching scrutiny of disinterested students of social conditions. Certainly many men have always felt that if they could not carry on an industry without exploitation they would have nothing to do with it. Just there is the rub. They may stoop to the level of men of low ideals or they may retire, and sometimes these appear to be the only alternatives, and neither alternative provides for employment under good conditions. The elaborate series of labor laws which we now have in every industrial country appear at first sight to be based on the assumption that the captains and lieutenants of industry

cannot be trusted to attend to their own affairs, to fulfill their natural and obvious obligations. Why should the State find it necessary to prescribe so many of the conditions of the wage contract, to specify how workers shall be protected from particular dangers, and to maintain a staff of inspectors to see that these regulations are enforced and that some kinds of obviously unsuitable labor, as for example that of young children, are not employed? The situation in this respect is in no wise different from that which has always justified State interference in private affairs.

The Fierce Blight of Over-Competition.

Gresham's law in currency, that base coin invariably drives out good coin if both are legal tender, has an analogy in the principle that industry tends always to sink to the level of the lowest standards which any group of employers are grasping or careless enough to maintain. As long as the burden of replacing worn-out labor by fresh, vigorous labor does not fall upon the employer there is profit in using up laborers instead of conserving and increasing their strength. In the long run the community suffers irretrievably from this policy, but dividends may be cleared up in the short run, and the losses may be thrown upon the charities and upon the families of the disabled. Ninety industries in which conditions are or might be ideal may be lowered to a lamentable degree by ten reckless industries with whose price and products the ninety must compete.

State interference is therefore necessary to establish minimum standards. The assumption which underlies the factory laws is not that all manufacturers require restraint, but that some do, and that those who are ready to carry on their industries above the level at which physical and moral welfare is threatened should not be subjected to unfair competition from those who are not.

A LUCKY HALT.

Some several weeks since the Columbus Casualty Company, of Ohio, launched its frail bark of 100 tons (thousand) capital and no ballast (reserve) on the choppy sea of insurance, to the accompaniment of the usual social functions, etc., etc. Glowing announcements of the treasure trove of casualty underwriting were convincing and a hundred thousand good sound dollars were invested—or at least the Ohio insurance department licensed it as owner of that much good bullion. Everything was lovely and the fires on the hearths of hope in the executive offices burned and sparkled cheerily. It had only to open office and the flow of the great flood of gold—or a satisfactory portion of it—would find its way in.

Now comes disillusion, and those who were supernormally prompt at the cashier's office on pay day—including the whole list on the payroll—are wondering why they did not first see the coming of the hard-hearted Lemert, the cruel head of the insurance department, who rudely closed the doors under a warrant charging more than a twenty-five per cent. impairment of the capital, or in figures, alleging that the purported capital of \$100,000 was shy just \$26,000.

The stockholders are lucky. At this unchecked rate they would soon have been assessed to pay officers' salaries. As it is they can save something or go down in their jeans and make up the deficit in capital and provide a working surplus.

Fools Rush In, Etc.

The lesson of this incident is that so few people know or will learn the fundamental rules of underwriting, or can comprehend the law of averages, and in their stupid ignorance, stumble into a course that is a straight chute to the toboggan. It seems impossible to impress upon the insurance organizing enthusiast that capital is merely a nest egg for the old hen to measure by, and that surplus is the working capital. Also that the more surplus the more business can be accepted over the counters and "reserved." And these same people know even less about insurance reserves than they do about the necessity for an adequate surplus.

The wise management of a new company sees only the surplus; the capital needs no watching. As an illustration, a company now in process of formation, proposes one million capital and four million surplus, a wise beginning, because it guarantees it against conflagrations or epidemics or conflagrations, at least so far as

history makes any record, or the law of average runs.

And so the Columbus Casualty Company is to be felicitated upon this early halt in its premature start upon an underwriting career that was an air-line to disaster. Perhaps it may serve as a warning and restraint for the innocent and unwary victims of the cocky promoter and another object lesson for the office boys of insurance who suddenly develop the microbe of managerial and presidential abilities in their ambitious breasts.

Henry E. Rawlings, who, for the past fifteen years, has been associated with the United States Guarantee Company, at its New York office, and, latterly, a director and one of its vice-presidents, has been appointed assistant manager of the Guarantee Company of North America, at its head office in Montreal, where he has taken up his residence.

THE PRESIDENT'S ADDRESS.

(Continued from Page 7.)

Establishment of the Savings Fund.

Then we have a free medical service for any employe taken ill during business hours—and they not infrequently run to a score or more a day—and special arrangements are made with physicians and hospitals for the care of those seriously ill. Among this great number not a few develop tuberculous tendencies and other troubles, for which a change sometimes works remarkable cures. So we have sent them from time to time to the Adirondacks, and to Colorado, and to California, and across the ocean. But of this I will speak later.

Beyond this we have an admirable system of savings—under the name of the Metropolitan staff savings fund. In that any of the company's employes earning not over a specified sum may deposit a part of his earnings, to be used in ease of incapacity by age or ill health—or at death. The company adds 50 per cent. to their deposits, invests the funds, credits to the persistent members all beyond the deposit and actual interest earnings of such as withdraw from the company, and we conduct its operations at no expense to the contributors. The contributors number about 6,000—the funds are nearly a million dollars and the credits to individual accounts run as high as 250 per cent. of their deposits.

Obligations to Employes.

In addition to this you are all more or less familiar with our welfare work. We believe we have a mission beyond collecting premiums and paying death claims. We have told you what we did with our employes of consumptive diathesis. Instead of sending one here and another there, it was thought we could best take care of them in a sanatorium of our own—and at the same time contribute to the world's knowledge of treatment and cure. We therefore sought the right to build a sanatorium with our own money for our own people. At the time we made the application we had 48 cases of consumption among our own employes. Our effort did not at first meet with the support of the Insurance Department, on the ground that such use of our money was not in consonance with insurance law. The Appellate Division decided that the project was within the discretion of the superintendent, and he thereupon granted the application. We now purpose going on with the work. Meantime, while the matter was pending, we were not idle, but sent out three and a half millions of illustrated magazines prepared by our own experts, to our policyholders, telling them how to prevent and how to cure the scourge, and we are in touch with all the institutions and all the movements throughout the country laboring with the same end in view.

Another branch of welfare work in which we are experimenting is that of nursing—in having bed-ridden policyholders in numerous large cities visited by trained nurses. These visits have run up into the tens of thousands. The justification for this is the saving in mortality. The reports re-

ceived show that we have saved human lives and restored to activity many that seemed doomed. Oh, that you might read some of the letters of gratitude that have poured into the home office! They would move your hearts. How far this may go the future must determine, but if the facts warrant it, we would like a Metropolitan Life Saving Station in every considerable city in the United States and Canada.

"Welfare Work" Natural Corollaries.

Nearing now the conclusion of my remarks, I would say that these various forms of welfare work—and others in our minds, not yet unfolded—seem to be the natural corollaries of our business. We propose to rise to the height of our opportunity, going as far as our charter rights, the means at our disposal and our own best judgment will warrant. We were the pioneers in these movements and we propose to maintain the leadership.

Since our efforts along these lines began, another life company has established a health bureau for the benefit of its policyholders; still another has taken steps toward the prevention of industrial accidents, having in view the safety of life and limb to the mass of workers in the leading industries; yet another large company has joined in the crusade against consumption; and to these we may add the recent action of a Southern Chamber of Commerce, which, recognizing the fact that this mass of agents and policyholders constitutes a ready medium for the ascertainment of facts and the dissemination of remedial information, invited the companies doing business in the State to co-operate with them in cradicate diseases peculiar to their section; and 14 of such companies gave assurance of their disposition to so co-operate—and thus we see that the grand work of humanitarianism, heretofore unknown among corporations of our nature, and largely inspired by our example, is moving forward with mighty strides.

Gives \$100,000 to the Cause.

A very pleasing incident has happened within a few days. An old and most estimable friend came to me and said: "Mr. Hegeman, I notice you are having some trouble in your sanatorium project. If the law is finally construed against you, as it ought not to be, and if your hands are tied, I tell you what I will do. I have a plot of nearly a hundred acres, within 50 miles or so of New York, finely adapted, as to elevation, etc., to the purposes you have in view, and I will turn that property over to you with my check for one hundred thousand dollars to be used for the purposes of a sanatorium." After the legal decision had been rendered conceding our right to go ahead with our own money, I called upon him to report the fact, to re-express our gratitude for the munificence of his offer, and to have him tell me that he was sorry that the opportunity of co-operating with us was lost. Did he tell me this? No. After thinking awhile he said: "See here; as between your plot and mine, build on whichever location you think the better adapted to the end in view. If on mine, do it entirely in accordance with your own plans and call on me for the amount promised to put

up the sanatorium."

He fully intended to be here this evening, but the last message I have received, here at this table, is one expressing regret that sickness confines him to his home. I wish I could mention his name. There is not a man in the room who does not know him, or know of him; but I am under pledge. He knows that he has our abiding gratitude—a cloud of witnesses yet to come will revere his name and memory—and he needs no assurance of the admiration felt for his noble generosity by every gentleman in this room.

Honor to Messrs. Le Brun.

And now, my friends—greatly to your pleasure, I know—we have reached what to all of us is a very interesting part of our banquet. Most, if not all, of you have had the pleasure of taking by the hand our estimable friends, the Messrs. Le Brun. They have been the company's architects for 34 years—a full generation. We first joined hands in 1876, when the company bought and reconstructed the Wilson G. Hunt Building in Park Place. The head of the firm was Napoleon Le Brun, the distinguished father of the two gentlemen whose presence honors us this evening. He was a man whom to know was to admire and to revere. When we think of him, there come to our mind the familiar words of Shakespeare: "His life was gentle, and the elements so mixed in him."

That Nature might stand up and say to all the world, "This was a man."

When the important work in Madison Square was determined upon they were commissioned to do it and they have done it faultlessly. Shortly after the completion of the first building the lamented senior died, and the company's work since, including the great tower and embracing various office buildings throughout the country, has been done by the sons. They are both ten-talent men. More than this, they are men of genius. Nothing I might say could add to their just renown.

In relinquishing their profession, after a lifetime of notable service, we have deemed the occasion an appropriate one on which to publicly express the debt of gratitude we feel for their great faithfulness and untiring devotion to the company's welfare. And as a mark of the esteem in which they are held, we have the pleasure of proffering them a modest tribute to

commemorate the completion of their work, and to convey with it every good wish that one mortal may invoke upon another. (Here was presented a replica of the tower, made by Tiffany, in sterling silver, three feet in height, with a working clock, dials and chimes, to correspond with the original.)

These gentlemen have warned us that they would rather build five towers than make one speech, so in place of the latter I have been handed this evening a communication from Mr. Pierre Le Brun, on behalf of himself and his brother, which it will give me much pleasure to read. (Hereupon Mr. Hegeman read a letter expressing the grateful thanks of the Messrs. Le Brun for the rare compliment paid them in the reception and banquet; for the noble act of the company in giving such generous acknowledgment to the work which it had been their privilege to perform; their sense of obligation to the contractors, engineers, and all who had rendered such intelligent and effective co-operation, and to the officers and directors of the company, whose encouragement from the outset had been their inspiration.)

Little remains for me now but to apologize to this distinguished body of friends for having inflicted upon them remarks which, save as to the Messrs. Le Brun, must have been more or less uninteresting. Were the truth told I fear that some, if not many, have wished that I was in the condition of a certain man at a campmeeting. The presiding elder had set aside an afternoon for a married men's service. The place was packed, and the moderator opened the services by saying, "All the married men in this room who are in trouble will please stand up." Thereupon every mother's son of them arose, save one. The leader said in wonderment: "My friend, you're a marvel; you are one man in ten thousand." And the man responded: "No, Mr. Moderator, 'taint that, but I'm paralyzed—I can't git up." But whatever wishes you may have had in that direction I will now dispel by silence. If I have trespassed too much upon your generosity, it is because I have been allured by the fruitfulness of my theme and emboldened by your boundless patience and politeness. And for the latter I proffer you the assurance of my most grateful thanks.

THE FIRST FAKE BURGLARY CONVICTION.

Superintendent F. M. Sporrer, of the burglary department of the American Bonding Company, furnishes the following interesting details of the first conviction on record for a fake burglary claim.

Ever since burglary insurance was invented it has gradually been replacing the fake fire as an immeasurably superior substitute by reason of not imperiling or destroying the lives or property of others. The firebug runs a big chance of figuring in a hanging if convicted of arson. As an amateur burglar he don't risk his neck, only his liberty.

It is extremely difficult to disprove a burglary claim on the ground of fraud, even when obvious. Hence the American Bonding has rendered the whole burglary underwriting profession a distinct and lasting service in establishing a precedent that may have a strong bearing on future fake burglaries. The facts of the case as furnished by Superintendent Sporrer, are as follows:

Last May the defendant made application for a \$2,000 burglary insurance policy to Allmond, Bird & Co., Wilmington, Del., agents for the American Bonding Company, of Baltimore. The policy was issued and on May 17 the assured, E. W. Luff, gave notice that he had been robbed and made a sworn statement of his loss. Among the articles claimed lost were two valuable oil paintings, which were afterward found in the loft of the stable on the Luff property. Luff also claimed to have lost \$1,150 in

cash, which was taken from a pocket-book in a bureau drawer. The list included a gold watch, two suits of clothes, one overcoat, a double-barrel breech-loading gun and other minor articles.

Notwithstanding the positive evidence presented the jury deliberated nearly twenty-four hours before reaching a verdict of guilty and recommendation for mercy, in recognition of which the court passed sentence of six months and fine equal to the costs of the prosecution.

While "The Chronicle" congratulates the company on the successful prosecution of this swindler, it is difficult to refrain from smiling at some of the circumstances connected with the case, particularly the issuance of a residence burglary policy on "oil paintings" in the cabin of a journeyman carpenter in an outlying district, which art works proved to be cheap litho chromos.

THE OUNCE OF PREVENTION BETTER THAN THE POUND OF COMPENSATION.

(Secretary Walter G. Cowles, of the Travelers Insurance Company, before the National Civic Federation.)

The subject suggested to me for discussion is somewhat differently but no more forcibly stated in one of the working texts of the insurance company with which I have the honor to be connected. We assert that "**An injury prevented is a benefaction; an injury compensated an apology.**"

All accidents due to occupation may with much propriety be called "industrial accidents," but I wish to limit the meaning of that expression for the purpose of this paper to those accidents due to creative, productive and constructive industries which have particularly come under my observation to the extent of many hundred thousand.

Exact information as to the number of industrial accidents in the United States is not obtainable. The number of fatal industrial accidents has been variously stated at from 20,000 to 50,000 in a year. I have no personal conception of the accuracy of either extreme. The number of non-fatal industrial accidents for the same period has been customarily stated as two million or more. It is sufficient to say that these accidents of whatever number are startlingly frequent, many of them startlingly serious and all carry with them a vast amount of human suffering not limited to the injured and a vast amount of economic loss which reaches in many directions and affects many interests. The problems presented by those who rightfully condemn the present legal conditions as unsuitable for relieving suffering or distributing loss, are receiving the serious attention of a growing number of the most able and most intelligent of our American men and women. Solutions of these problems cannot be reached by sensational methods which appeal more largely to passion than to judgment. The extensive publication of incomplete and misleading statistics accompanied by sensational comment is doing more harm than good to the cause which these ill considered efforts profess to espouse. The tendency toward error will be strong enough without misleading influences. It will be much easier to reach the wrong than the right conclusion as respects many of the details involved in a suitable scheme of compensation for accidents. It will require the cool, dispassionate judgment of many well informed persons after mature deliberation, exten-

sive inquiry, and many consultations to even approach a partial solution. We have the obvious mistakes of many other countries to guide us somewhat, but thoughtful investigation soon leads us into the field of speculation and pure conjecture where we must proceed without landmark toward an unknown destination.

Prevention Easily Attainable.

While awaiting some solution of these problems we may with much profit and much hope direct our attention to the prevention of accidents which, as stated in the subject, is more important than compensation and we may safely add more desirable than compensation.

Can industrial accidents be prevented and, if so, how?

The first part of the question is easily and confidently answerable in the affirmative. Nor is it necessary that this answer should remain an unsupported assertion. Confirmative evidence is within the knowledge of all well informed persons and confirmation by actual examples in real every day life could be brought forward in sufficient numbers to consume the time of all your sessions in the telling. I pause to select one general but striking example from the large number constantly passing under my observation.

Stupid Judgment.

A coal prospect was developed by a small private corporation, one of those close organizations of the family sort. The substantial owners did not live at or anywhere near the mines. They placed a very competent superintendent in charge and paid him what he was really worth. Year after year he developed and operated that mine without accidents of any moment. There were a few trifling mishaps without which rugged manual labor is scarcely possible. There was no loss of life or limb and yet the mine possessed many inherent and some unusual dangers. Finally it was sold to one of the large industrial concerns engaged in gathering in a number of such properties. I do not know that the new owners mined any more coal than their predecessors, but they doubtless mined it at less expense, and, as the price of coal did not go down, we may assume that the profits of the owners were increased. The superintendent did not appear to fit this new organization very well, perhaps he was considered too expensive, perhaps his methods were not approved, at any rate he severed his connection with the mine. With startling suddenness the scene changes. Many of the old miners left and their places were filled by a less desirable

class of workmen. Serious accidents began to happen and these were followed by still more serious explosions. There is more to the story. I wish I could tell it all, but this answers our present purpose. Comment is unnecessary, the moral is obvious. Fortunately there are many such superintendents not only in mines but in other industries; unfortunately there are more who are not such.

There is usually coupled with this branch of the question an inquiry as to the percentage of accidents which are preventable. Some say 10 per cent., others say 50 per cent. or more. That feature of the inquiry concerns vs little. It may be assigned to the field of hope rather than prophecy. There is said to be joy in heaven over one sinner that repenteth; there may well be joy on earth over one industrial calamity of this kind which is averted.

How Prevent?

We must pass along rapidly to the second element of our question which is, "How may industrial accidents be prevented?" For the purpose and within the limits of this paper we must confine our discussion to the general moral and physical conditions which result in accidents. These conditions might be subdivided to an almost infinite extent if time permitted. We have already had an example of the effect of moral conditions upon accident. Within the moral conditions come management, superintendence, envir-

onments, character of labor employed and the general relations between employer and employed. Within the physical conditions come room, light, sanitation, every practical device or provision in the interest of safety and unceasing vigilance in the effort to keep the plant as a whole with every machine or moving thing, every appliance and every tool in the best possible condition.

Entirely Practical.

Perhaps some one has made the mental criticism at this point that to reach this high plane of excellence in moral and physical conditions is ideal rather than practical. With this conclusion I shall promptly differ, and I regret that time will not permit me to proceed with this feature to the point of absolute conviction. I shall ask you to believe that I am not an idealist. I believe in the ideal as the thing for which we should strive. It is far better to work toward a high ideal than to work beyond a lower one.

An insurance company is a commercial institution maintained for what we assert to be the beneficent purpose of equitable distribution of loss. Insurance companies hope to make profits, and they should. A test of the practicability of prevention can be found in the efforts of at least some of the companies (I wish I could say all) in this direction. I can speak with more certainty of the efforts and aims of my own company than of any other. Many years ago we undertook carefully considered plans for the prevention of industrial accidents. We established and are now maintaining an extensive and intelligent system of inspection, and into that service we are putting thousands upon thousands of dollars every year. All this finds its way into the reported expenses of the company, those so-called wasteful expenses upon which the sensationalists have offered so many unkind and untrue comments. Do you think we are putting our money year after year into a lost or hopeless cause? The most unkind critic of insurance companies could hardly claim that it would be out of tune with the customary assertion that insurance companies are diverting all possible income to profit.

Not Eleemosynary.

Nor do we claim that this is done for purely humanitarian reasons. It is all in the interest of humanity certainly, and the fact that it helps and protects our business can hardly be urged as an objection. Its benefits accrue to the company, they must result from the prevention of accidents which otherwise might become claims. Are we

THE ORIGINAL COMPANY IN AMERICA MAKES BEST RECORD.

The annual meeting of the shareholders of the Guarantee Company of North America was held at its head office, in Montreal, January 20. The president, Edward Rawlings, in the chair.

The report showed the following results: Total income for the year, \$320,565; total amount of risks in force (less reinsured), \$62,131,741; total amount of claims paid and provided for, \$2,235,342; surplus as regards shareholders, \$1,041,423; surplus as regards policyholders, \$1,346,023; total resources, \$1,919,892, an increase of nearly half a million over the preceding year.

The following directors were elected for the ensuing year: Sir Edward S. Clouston, Bart.; Henry W. Cannon, New York City; James B. Forgan, Chicago; George Hague, Hartland S. MacDougall, Edward Rawlings, William Wainwright, Henry E. Rawlings and the Hon. E. C. Smith, St. Albans, Vt.

At a subsequent meeting of the board, Edward Rawlings was re-elected president and managing director, and Hartland S. MacDougall, vice-president for the ensuing year. Henry E. Rawlings was appointed assistant manager, and Richard B. Scott re-appointed secretary and treasurer.

THE OUNCE OF PREVENTION BETTER THAN THE POUND OF COMPENSATION.

Continued from Page 19.)

preventing accidents by our system of inspection? We certainly believe we are and for that reason we are constantly strengthening and improving the service in every direction. What are we doing? We certainly know the conditions which cause accidents, and we can equip our inspectors with a broad and comprehensive knowledge of the moral and physical causes which no individual or corporate employer of labor has equal opportunity to acquire. Our inspectors bring to their work all this vast fund of information. They apply it to the plant under inspection. Dangerous conditions more or less obscure or not appreciated are thus brought to light. Our recommendations and suggestions are of course purely advisory, they cannot be mandatory. Some receive them thankfully and act upon them immediately. Others are indifferent. Some absolutely rejected our suggestion. Our only remedy in the latter case is the cancelation of our insurance. Unfortunately other companies may be found whose inspection requirements, if any, are less exact, and protection thus obtained against conditions which should be uninsurable. Of course all our efforts are not effective but we go right on with the application of our inflexible rule that we will not knowingly provide indemnity against preventable accidents. Human foresight is fallible, preventable accidents will continue, but they will grow less in number just as rapidly and extensively as the effectiveness of this kind of service is increased.

The Moral Side Considered.

Into this service we put constant study and the best obtainable skill. We encourage our inspectors to devise guards suitable for every condition they encounter. We grant rewards to those who devise meritorious appliances. We seek publicity for our devices by frequent exhibits. The service is entirely free from all commercialism. We have no devices for sale. We support associations and societies engaged in the development of safe work places. We consider carefully the moral as well as the physical condition likely to produce accidents. The shortcomings of careless or brutal superintendents or foremen are brought to the attention of their superiors. We strive for light, for space, for cleanliness and general sani-

tation. We prescribe remedies of a practical character for existing dangers. We bring conditions by photographs or other vivid means right to the desks of those highest in authority, many things they have never seen and of the existence of which they never dreamed. Many other companies are doing valiant service in the same direction, but in sharp and discordant contrast comes the public announcement credited to one insurance manager that he "doesn't give a whoop for inspections" and by fair inference of course he "doesn't give a whoop" for injuries.

The State factory inspectors are faithfully doing their part. A large majority of the State inspectors welcome the work of the insurance inspectors to supplement their own efforts. There are a few exceptions, and the reasons which govern these are hard to understand. We are all after the same thing, we all have our limitations, but our hopes for the future are great.

Practical Prevention.

It seems then that the practicability of prevention has been demonstrated. Of course we cannot enumerate the accidents which have been prevented. We can conclusively demonstrate actual prevention by comparison of results preceding and following effective inspection in many risks. We can say that we have a method of practical prevention at hand and in actual service. It is not complete nor perfect by any means, but it is well and effectively started. Time and experience will enlarge and vastly improve it. It answers the requirement of practicability, and all that remains is to make it universal and effective. Is that also possible? It ought to be possible to bring every plant in this country up to a reasonable inspection standard. How can it be done? Not by the inspectors alone. The owners and

their substantial representatives must do it and they must be made to do it if unwilling. The inspectors can advise, assist and suggest out of their vast fund of general experience, they can bring to light the obscure or unrecognized dangers which escape the owners' observation. The inspectors may plan and devise, the owner must execute. How can owners be compelled to bring their plants to a condition of reasonable moral and physical safety? It will require well considered laws which will come in the form of rational evolution and it will particularly require the rigid enforcement of those laws. Some will comply willingly and completely but others will not. How can these laws be evolved and how enforced? Suppose we begin by working along the lines devised for the protection of those who use the public streets. The rules of the road have been in force from time immemorial. The traffic conditions in our large cities were causing many accidents. It seemed reasonable that some could be prevented. From an occasional police officer at a busy corner there was evolved the traffic squad. See what has been accomplished here in New York by the rigid enforcement of existing law.

There is a law in most States requiring that gears upon machinery shall be guarded. Are they guarded? The fearful tribute of crushed human members exacted by the unguarded gear every day of our lives is a ghastly answer to the question. How can suitable guards be secured? The law apparently fails by reason of necessary generality in expression. To say by statute that all dangerous gears must be guarded is far less effective than to direct through a properly empowered official that a particular indicated gear shall be guarded in a suitable way. It is not sufficient to enforce the installation of the safeguard, its constant maintenance must also be enforced. If it is removed, investigate

the removal and hold the individual who is responsible to a suitable penalty. Criminal statutes respecting murder and mayhem are still in force and suffering from neglect. Don't be satisfied with the explanation that the fault lies with a corporate owner which can neither be hanged for murder nor imprisonment for mayhem. Corporate crimes be they great or small are committed by individuals.

Punish the Individual.

Follow the responsible individual. Let him suffer the penalty which fits his offense. If it is criminal, let him suffer as a criminal. If he is negligent without criminal intent, let him suffer a suitable penalty for that. Suppose a brutal foreman pulls the guard from a gear, hurls it across the room (and such things have happened many times), then calls some ignorant foreign laborer who cannot speak a word of English, gives him a piece of waste and motions to him that he is to clean the moving machinery including parts around and near the gears. It is almost morally sure that the poor fellow will get into those gears. The foreman will say he should know better, he can see them and should take care of himself. Perhaps he should, but he does not. A serious injury results. If that foreman produced that same injury away from his place of work, he would be pursued criminally, but how often are the criminal statutes actually and effectively evoked in cases of this kind. The obligation of the individual for distinct or, certainly willful violation should not be overlooked because of corporate connections. The recognition of reasonable individual obligation provides a strong restraining influence. I believe a workman who unnecessarily removes a safeguard and thereby suffers injury himself should be held to personal account just as an intending suicide may be held.

Could the traffic squad remain effective if the name of a recalcitrant driver was taken and his offense reported to his employer? Scarcely. The remedy is found by holding the individual immediately and sharply responsible for his violation of the traffic law without regard to his employment or the fact that his offense was committed theoretically in the service of his employer. His employer may pay his fine but the fact that he has been personally held serves as a deterrent influence against further offense of a similar kind.

The Lump Will Leaven.

I must leave the consideration of these tremendously interesting questions with a few of many possible answers barely suggested rather than demonstrated. I have evoked impressive incidents and startling contrasts from real life to bring out forcibly a very few of the many possibilities in the direction of prevention. I am personally firmly convinced that great opportunities for the relief of the industrial carnage exist. If I have led any of you to think in the same direction, or to reach wholly or partially the same conclusion, I am indeed thankful. I urge every earnest student of the sociological problems of the day to give these questions most thoughtful consideration, and I think we may with reason believe that the benefaction of prevention may be largely increased and the apology of compensation correspondingly reduced.

Resident Vice-President.

84 WILLIAM STREET - - NEW YORK

Telephone John 1770 - 1771

HOME OFFICE OF THE

Metropolitan Life Insurance Company

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE.

This company has more premium paying business in force in the United States than any other company, and for each of the last 15 years has had more New Insurances accepted and issued in America than any other company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

An Announcement and an Invitation.

TO INSURANCE MEN:

We beg to announce that with the beginning of the year we have made some very desirable changes in the management and methods of our New York Office, and are therefore in a better position than ever to co-operate most effectively and cordially with brokers and agents in placing our lines of insurance.

The Casualty business of our New York Branch is now under the able direction of Messrs. Walter A. Hughes, Charles H. Phelan and Beverly W. Wrenn, Jr., who, with the aid of a corps of expert assistants, are prepared to offer every facility and show every courtesy to our clients.

Messrs. Mowry and Patterson, of course, remain in charge of our Life business.

The History of Iscariot Repeated.

The business of writing surety bonds to accompany excise licenses in New York State has proven to be a most tempting field to surety company officers. The political scandals connected with the issuance of these bonds in the years immediately following the passage of the present law (1896) are too well known to need repeating, nor do the conditions of those times exist to-day.

To understand the present situation it should be remembered that the business has been actively sought by certain companies only for those same companies to afterward drop out of the field, or to join the reinsurance association, which appears to have proved itself to be the best means by which the profits of the business can be secured with a minimum of risk. In its earlier days it was so organized that it was held to be a combination in restraint of trade. The existing agreements are drawn with the express purpose of avoiding this situation but make possible certain disadvantages. Under these reinsurance agreements only those bonds are reinsured which are written by the agent representing the ten companies included in the association. Though a member of the association, any company is free to write such bonds as it may elect outside of the association; such bonds are not reassurable by the association.

Chronological.

In 1907 there were competing for the business of excise bonds in New York City, the association, the United Surety Company of Baltimore, who appointed as its agents Reilly & Farley, and the Bankers Surety Company, represented here by Sanders & Flanders as general agents, who appointed Arthur J. Reister excise manager. This man Reister was formerly

an inspector in the excise department and had graduated into the Ryan excise bonding agency at Buffalo prior to his elevation to the larger field and opportunities of this city. He had formerly been agent for a number of different companies, though never representing the same company for more than one year. As a result of what he did to the Bankers Surety Company an indictment for grand larceny was found against him in New York County, and the action is still pending before the Court of General Sessions.

Incidentally, it may be mentioned that this indictment is about two years old and there is a clearly defined mystery as to why the case has never been brought to trial. It has been set several times and for reasons pleaded variously by one side or the other, and even by both, the trial has been postponed. The logical inference follows that each side is afraid and the other is glad of it.

Reilly & Farley were and are presidents respectively of the Retail Liquor Dealers Association of this city and State. They have attempted to make a co-operation between the liquor dealers and the surety companies for the maintenance of a "reasonable rate" for these bonds. It is understood that a block of stock was secured and held in such a way that two and three share lots could be purchased by the individual liquor dealers. It is believed that three or four hundred such purchases have been made.

The Decent Element.

The reinsurance association has been since 1906 represented by A. E. Sheridan, who alone of all the excise agents has had a surety training, and is essentially a surety manager on a salary basis. It is under-

stood that Sheridan was appointed to this position upon the recommendation of George F. Seward, of the Fidelity & Casualty, and F. W. La-frentz, of the American Surety, under whom Sheridan had been working in various positions of responsibility for that company.

In addition to suffering through the alleged rascality of its agent, the Bankers Surety Company suffered severe losses upon the bonds of the places which it wrote. Because of the competition which existed in May, 1907, the rate had been cut to \$22 per bond. This, too, was the last year in which existed the custom among the bond brokers and brewers representatives at 1 Madison Avenue of "all or none." Under this custom it was usual for the broker to receive a large amount of money with which to secure the placing of an extra-hazardous risk, with the understanding that as much as he was able to save on the premium actually paid, should belong to him. In order to secure as much of this amount as possible, it was customary for the brokers to make up blocks of bonds, including in each block a few of the extra-hazardous risks. When the surety agent objected to accepting these risks at the regular rate, he was promptly informed that it was a case of "all or none." Any company which was willing to write the extra-hazardous places could secure a considerable amount of respectable business; thus, Reister, for the Bankers Surety Company, wrote some twelve hundred bonds in Manhattan and the Bronx, among which were all of the risks rejected by the reinsurance association.

In addition to this his firm handled

(Continued on Page 12.)

"AMERICAN RAILWAY SECURITIES."

The "Journal of the Institute of Actuaries," of London, for January, prints a paper by Hubert Ansell, F. I. A., manager of the Anglo-American Debenture Corporation, Ltd., upon "American Railway Securities as Investments for Insurance Companies," portions of which cannot fail to be of interest to readers of "The Chronicle." The paper which was read before the institute on November 29, last, sets up the following principal ways of determining values.

1. The cost of the undertaking.
2. The probable cost of building another similar railway.
3. The actual present value as evidenced by the revenue derived from it.

And, continuing, says of these:

As regards the first of these, it may be noted that this criterion of value is the least reliable of the three, but it is interesting not to overlook it, as it is in this respect that we find the greatest contrast between English railways and American ones. Whilst English railways were built at very great expense, large sums being paid for land both in the country and in towns, and the actual work of construction being done upon the most expensive scale, American railways were, in early days, built very cheaply, the land being obtained without payment, and the railway construction being on an economical scale. The capital was also raised in a totally different manner, the English railway capital being for the most part raised in the proportion of one part debenture capital and three parts share capital, whilst the original method of building American railways was to raise all the capital required for the prime cost of construction by the issue of bonds, the share capital for the most part being issued to promoters and others for considerations of no real value. Even in recent times many railways have increased their mileage by issuing new bonds as a first charge upon extensions built with their proceeds, no increase being made in the share capital. It is obvious that if these principles had been followed continuously by all the American railways, the position would be thoroughly unsound, and there would be no occasion for anyone connected with this institute to read a paper on the subject of American Railway Securities as investments for insurance companies, for the reason that there would probably be few or no securities answering to this description. This, however, is not the case.

Referring to earlier incidents of railway financing in this country, Mr. Ansell says in part:

The earlier instances occurred in this way—the companies got into financial difficulties and had to be reorganized, and in the case of most reorganizations the plan provided that shareholders should lose their shares unless they paid assessments upon them. This was so common that it became a saying in America that rail-

way shares were divided into three classes: those which paid dividends; those which did not; and those which, besides not paying dividends, called for assessments at fairly regular intervals from their shareholders.

He is unable to tell just how much of the capital represents a cash investment; but, from certain data, infers that "it is probably safe to assume that less than half of this was issued without payment of cash."

The conditions which formerly obtained, are again alluded to, in part as follows:

Not many years ago the railway systems of the United States were considerably more numerous than at present, and little traffic went through from the point of origin to its final destination upon the lines of one railway company. A railway might have plenty of traffic originating on its own lines, but be dependent upon other railways to carry it through to its destination, and the rate which the railway obtained for carrying goods depended naturally, as it still does to a great extent, upon the terms which it was able to make for interchange of traffic between the local and the trunk line. The rate which a local line was able to charge and keep for itself depended very much upon what it would cost the trunk line to build a branch line into the same locality. Then again, the rate which a trunk line could charge between two important points was, and still is to some extent, influenced by the question of what it would cost to build a new line between the same points.

* * * *

Up to about twenty years ago it was not uncommon for a comparatively powerful company to actually build a duplicate line under the circumstances referred to above, with the inevitable result that one or both of the companies concerned suffered serious loss. In many cases the companies continued the competition until one was starved out of existence. This of course was the crudest form of railway warfare. Then followed a period during which these occurrences were less frequent, as it was generally found sufficient for the more powerful company to threaten the process to enable it to make satisfactory terms for the absorption of the smaller company. In many instances the terms were also quite fair to the latter. This process had the effect of bringing most of the railways of the country into systems of 2,000 miles and upwards. During the last decade, however, a more extensive application of the same process has been in vogue.

* * * *

One such group consists of the Union Pacific, the Southern Pacific, the Illinois Central and the Baltimore & Ohio Railways. It is obvious that a system of that size cannot be duplicated with the aid of any sum of money at all likely to be found for the purpose. It is still possible for a railway company belonging to one group to build a new line through territory at present served by another, but the process has not the same attraction for the aggressor now, for

the reason that a railway already in the field would be supported by the full financial strength of the group and so could not be starved out at any reasonable cost. This condition of affairs has, on the whole, had an advantageous effect for investors, and during the last decade there have been comparatively few instances of absolute financial disaster to any American railway due to excessive competition.

The paper proceeds to lay down the rules and principles by which the revenue accounts of railway companies are to be analyzed.

ONE OF THE BEST.

The Mutual Benefit Life Insurance Company, of Newark, again shows itself to be one of "the best."

The company has well earned its reputation as a dividend payer. Besides the regular dividends payable in 1910, amounting to \$2,876,507, the officers have voluntarily set aside and charged as a liability in excess of this amount, special dividends of \$675,000.

This remarkable showing was made possible by the facts that first, the expenses incurred in obtaining new business in 1909 were only 81 per cent., and the total expenses on all business averaged only 79 per cent. of the amount allowed by the insurance laws of the State of New York; and, second, that the net rate of interest earned on the invested assets was 4.7 per cent., and as is the company's usual experience, its mortality was very favorable.

Under the above-mentioned conditions the company during the year issued new insurance amounting to \$67,634,309, increasing the business in force by \$32,935,318. The company paid to its policyholders \$12,463,665. This, together with the usual expenses when deducted from the year's income, left \$8,350,414 as an excess to be added to the policyholders' fund.

The total assets aggregate \$128,986,850, while the reserve amounts to \$116,071,906. The total business in force is \$507,224,976, covering 215,615 policies.

Phoenix Mutual Life

INSURANCE COMPANY,

Hartford, Conn.

Write Home Office,

THE HARTFORD LIFE SAFETY FUND.

Judge Curtis, of the Connecticut Superior Court, has handed down a further decision relative to the "safety fund" of \$1,000,000, held by the Hartford Life Insurance Company.

He holds that the security company with which the fund is deposited in trust, was not compelled to set up a "sinking fund" out of the interest received on Government bonds in order to provide for their going to par at maturity. The ground is that the bonds may realize a greater or smaller price as they are sold at one time or another.

The court holds, however, that the security company was not entitled to dispose of the Federal bonds and invest in other securities as follows:

It is therefore the conclusion of the court that the security company must be held to the obligation of now holding \$1,000,000 in the principal account of the safety fund ready for investment in United States bonds, and if the miscellaneous securities now held by it are sold for a greater sum than \$1,000,000, then such excess in addition to said \$1,000,000 will become also a part of the principal account of the safety fund.

The court also finds that the security company has charged more for its services than as per contract, which was as follows:

The rate to be 1 per cent. on all sums up to and not exceeding \$200,000, but in no year to be less than \$500; and from \$200,000 to \$400,000 to remain at \$2,000 per annum and on all amounts exceeding \$400,000 to be one-half of 1 per cent. per annum.

And also:

By the disclosures it appears that upon an income of \$970,175.83 to September 18, 1908, the trustees had been paid as compensation \$116,741.16, or 12 per cent. of the income.

The court holds concerning what constitutes reasonable compensation, as follows:

I find that the usual compensation of 5 per cent. on the income would not be reasonable at this period. I find that from January 1, 1891, the security company should be allowed compensation at the rate of 8 per cent. per annum on the gross income; and that any excess of that amount retained by the security company in any year, with simple interest thereon from the close of the year, belongs to the income account of the safety fund, and must be credited to such account.

The security company is allowed eighteen months' time in which to sell the securities and purchase United States bonds. During this time, the company may amend the contract, so as to permit other investments,

A NOTEWORTHY RECORD.

To be looked upon favorably in one's own community is the first step. To gain recognition by the whole home State is some accomplishment. But to lead all companies, both foreign and domestic, in the amount of business written in that State is an attainment worthy of mention. However, this is not the first time that the Old Line Bankers Life Insurance Company, of Nebraska, has held such a record. President Wilson and his associates well deserve the recognition given them by the people of Nebraska.

It is of considerable interest to

note, as will be shown by the statement published in this issue, that the assets of the company are invested solely in first mortgage farm loans and liens on policies. The statement is also conspicuous in that it does not contain a dollar invested in certain classes of assets which are common to any companies.

Of its total assets of \$3,446,342 over \$3,000,000 is earning the highest rate of interest that conservative investment can warrant. The company puts up a full reserve, actuaries, 4 per cent., and has a surplus on hand of \$857,936. The new business written in 1909 represents over 20 per cent. of the total amount of business in force.

UNLICENSED BUSINESS MAKES INEVITABLE TROUBLE.

Following the publicity given to the alleged attempt to swindle four Indiana life insurance companies, by certain residents of Kentucky, comes the announcement of the insurance commissioner of Kentucky, Charles W. Bell, that he intends to take action against the Indiana National Life and the Commercial Life Insurance companies, both of Indianapolis, on the charge of operating in his State without being duly licensed. It is estimated that insurance amounting to \$100,000 has been fraudulently obtained by operators in Kentucky. Besides the brokers involved, it is reported that several physicians were a party to the conspiracy.

Three Arrests.

On Friday last John J. Keene, P. J. Needham and T. T. O'Leary, insurance agents at Louisville, were arrested on warrants gotten out by S. C. Renicke, secretary and treasurer of the Indiana National Life Insurance Company. In his affidavit Mr. Renicke charges that the defendants in the employment of the Indiana National Life Insurance Company and various other insurance companies, among others, the Independent Life Insurance Company, the Commonwealth Life Insurance Company and the Standard Life Insurance Company have been guilty of the crime of conspiring to defraud the said insurance companies and the public generally by a conspiracy between themselves and certain physicians in Louisville and in New Albany, Ind.

The First Case.

The investigation was started when the Indiana companies received word of the death at Louisville of a teamster earning \$9.50 a week, who was found to have carried \$15,000 life insurance at the time of his death. He died two weeks ago and was buried at Louisville the day after he died.

All of the policies were made in favor of the wife. The applications for the policies on rider written by the Indiana companies were signed, it was stated, by an insurance broker of Louisville. It was said also at the office of the Indiana National Life that the check for the first premium on the policy with this company, the only premium paid, was signed by this broker, who has a contract with the Indiana National Life to write insurance in Clark County, Indiana, just across the river from Louisville.

The Indiana insurance companies, it is understood, have the statement from a brother and sister of the insured, that this broker has been at the teamster's home frequently of late,

and that he was there on the night he died.

Unable to Read or Write.

Another of these questionable risks was Mrs. Anne Lyons. She appears to be 85 years old, and Renick had some trouble in making her understand the situation when he went to visit her. She finally said she had never taken out a policy and was unable to give a sample of her signature because she was unable to read or write.

FROM FAR AWAY NEW ZEALAND.

"The Chronicle" has received, with the compliments of Morris Fox, actuary of the Government Insurance Department of New Zealand, the valuation of that department as of December 31, 1908.

During the three years previous, the new business was \$11,300,000 and the income nearly \$8,000,000. On December 31, 1908, the insurance in force stood at almost \$60,000,000 and the resources at about \$27,000,000.

Since 1903 the rate of interest realized has varied as follows:

1903 4.4 per cent.	1906 4.5 per cent.
1904 4.4 per cent.	1907 4.5 per cent.
1905 4.5 per cent.	1908 4.6 per cent.

In the successive quinquenniums since 1890, the ratios of expenses to income and to premiums have steadily diminished.

	To Income.	To Premiums.
1890.....	14.4	20.2
1893.....	13.4	19.0
1896.....	12.0	17.5
1899.....	11.9	17.5
1902.....	11.3	16.8
1905.....	11.0	16.7
1908.....	10.6	16.6

The surplus on December 31, 1908, was \$1,250,000. It enabled a reversionary dividend to be declared at the rate of 1 per cent. per annum on the sums insured, with dividend additions, for the general class, and of 1.1 per cent. for the temperance or total abstinence class. Concerning the temperance class, Mr. Fox says:

The larger bonuses allotted to policyholders in the temperance section on this occasion are due to the comparatively light mortality they experienced during the triennium under review; but as this small section tends to decrease rather than to increase it will always be liable to fluctuations, a single death claim, more or less, for a large amount being sufficient to make a difference in the rate of bonus. This has sometimes been lower than, sometimes equal to, and sometimes higher than, that of the general section, and, seeing that it cannot be expected that similar fluctuations will be avoided in the future, it would be a great saving of expense and to the advantage of policyholders in both sections if a practicable way of amalgamating them could be agreed upon.

BEARING FALSE WITNESS.

The "New York Times," of Sunday, January 30, published, with a display head, a sensational article, praising "the work of Richard McCurdy," which was ascribed to "this week's issue of 'The Chronicle,' a paper devoted to the insurance trade," the caption reading: "'The Chronicle' Says His Achievements in Mutual Life Makes His Faults Insignificant."

The article had not appeared in last week's issue or any other issue of "The Chronicle."

The "New York Times" of Tuesday, February 1, prints, by request, the following correction:

The article which appeared in last Sunday's "Times" praising the work of Richard A. McCurdy, ex-president of the Mutual Life Insurance Company, was attributed to "The Chronicle," a paper devoted to insurance matters. As a matter of fact, the article was published by the "Financial Chronicle," one of the oldest financial publications in the city.

ANOTHER \$1,000,000 POLICY.

Lawrence C. Woods, assistant manager of the Pittsburg agency of the Equitable Life Assurance Society, has written an application for \$1,000,000 on the life of John H. Jones of that city. The Pittsburg-Buffalo Company, of which Mr. Jones is the head, is made the beneficiary.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force. \$201,185,435.00
(Paid for Basis)

Assets \$67,324,334.35
(Market Value, Dec. 31, 1908)

Contingency Reserve . \$8,819,979.14

The NEW POLICIES of the Provident are unsurpassed for conciseness and simplicity of form and for adaptability and liberality in all essentials.

The Premium rates of the Provident are exceedingly low and are still further reduced by large annual dividends.

PRUDENTIAL APPEALS.

Chief Justice Gummere has allowed a writ of certiorari to review the action of the New Jersey State Board of Equalization in sustaining the appeal of the Prudential Insurance Company, of Newark, from the assessments of its reserve fund on deferred dividend participating policies. The fund was assessed at \$14,623,279.37. Under the writ the New Jersey Supreme Court will review the entire proceedings in connection with the assessment from its inception and will be asked to pass upon the constitutionality of the law of 1907 compelling the creation of a special reserve for deferred dividend policies. It is expected to come up this month.

THE LIBERTY-BANKERS DEAL.

It is reported on good authority that the failure of those in control of the Liberty Life Insurance Company to purchase control of the Bankers Life of New York is due to two facts: First, that \$325 per share was finally asked for the stock of the Bankers Life. In view of the company's present condition this is ridiculous. Second, one of the conditions of the sale included the retention of Eugene Van Schaick as attorney. This in itself, it is thought, should be enough to put the "kibosh" on any proposed deal, insurancewise, even if the price was satisfactory.

WHAT IS IT?

An antiquated and old-fashioned subscriber asks "The Chronicle" to interpret the motto, "Fatti Maschii Parole Femine," which appears on the great seal of the Maryland Insurance Department, used by Commissioner Crouse on all formal documents.

The translation can be made to vary by speaking quickly and taking the phonetic or reformed spelling. At any rate Mr. Crouse has drafted a "model code" for Maryland's proposed revision of her insurance laws and he may adopt a reformed method of spelling or pronouncing his motto. At any rate it is safer to get an official interpretation from him. It is quite likely that thereby hangs a tale.

INSIDE THE FIRE LINES.

There are some interesting results shown in a few of the January 1 statements of the veterans and youngsters of the fire companies that have reached "The Chronicle." There are others doubtless to follow.

Reviewed briefly the leading ones are epitomized:

The Shawnee Fire, Age 25.

The Shawnee Fire Insurance Company of Topeka, Kan., now has total assets of \$1,460,457.70 with a reserve for reinsurance of \$958,146.34 and a surplus to policyholders of \$392,984.54. The Shawnee Fire has been in successful operation over a quarter of a century and has paid in losses over \$4,400,000. It has a large staff of agents throughout the United States and is a notably popular institution.

Agricultural, Age 57.

With a very substantial gain in its net surplus the Agricultural Insurance Company, of Watertown, N. Y., enters the year 1910 under most favorable auspices. Its fifty-seventh annual statement shows funds aggregating \$3,470,509, a gain of \$406,928 over 1908. The company's reserve for reinsurance was increased to provide for expanding business to \$1,736,047. After providing \$184,789 additional reserve to meet all other liabilities the staunch old Agricultural exhibits a net surplus beyond all liabilities of \$1,049,672, which compared with \$786,779 last year shows a gain of \$262,892 for the twelve months just closed. The growth of the Agricultural has been steady and sure, the result of its conservative management and liberal treatment of its policyholders.

The American Central, Age 57.

The American Central, of St. Louis, shows total assets of \$5,562,192.51, the premium reserve being \$2,244,928.21, and the net surplus \$1,003,419.29. The surplus to policyholders is \$3,003,419.29. The assets show a gain of over \$200,000, while the premium reserve has increased more than \$140,000. The American Central is in the excellent condition which might be expected of such a particularly well managed company.

The Springfield F. & M., Age 61.

In its annual statement in this issue the Springfield Fire & Marine Insurance Company shows assets aggregating \$9,761,460.23, the reinsurance reserve fund being \$4,369,974.40 and the surplus to policyholders \$4,718,061.53. The Springfield made hand-

some gains in 1909, referred to in detail in another column.

American National, Age 2.

The American National Insurance Company, of Rock Island, Ill., makes an excellent showing. The assets are larger by \$111,706 than a year ago, and a reserve of \$149,545 unearned premium liability and \$35,376 for all other liabilities, leaving a net surplus of \$80,460, which, with its capital of \$200,000, gives a policyholders' surplus of \$280,460. The American National was organized in 1907, and has built up a liberal income from carefully selected business.

The British America, 77.

The British America Insurance Company, of Toronto, shows an excellent financial condition with the net surplus at the highest point in the history of the company's United States department. The assets aggregate \$1,556,740, and after providing liberal reserves of \$804,796 for unearned premiums and \$81,803 for losses in process of adjustment the surplus over all liabilities reaches the sum of \$654,302, a gain since a year ago of \$83,579. The underwriting ability is shown in the results, the loss ratio of the company for 1909 being the lowest during its whole record in the United States.

The Germania Fire, Age 50.

The Germania Fire, of New York, announces total assets of \$6,562,329, the premium reserve being \$3,266,289, and the net surplus \$2,008,419. The surplus to policyholders is \$3,008,419. The assets have increased \$688,313,

the premium reserves \$110,861, while the surplus shows the handsome gain of \$531,544. Taken altogether the statement is both progressive and strong.

The Hamburg Bremen, Age 56.

The annual statement of the United States branch of the Hamburg Bremen Fire Insurance Company, of Hamburg, Germany, shows it to be in gratifying financial condition with total assets of \$1,997,569.22, a reserve fund for reinsurance of \$1,281,184.33 and a surplus of \$585,125.58.

The Hamburg Bremen added over \$100,000 to its surplus during 1909. It is one of the most carefully managed German companies and has built up a decidedly good American plant, which is very well handled.

Individual Fire Underwriters of St. Louis.

The annual statement as of December 31, 1909, of the Individual Fire Underwriters, of St. Louis, as reported to the Missouri Insurance Department, is as follows:

Total assets of \$1,086,144.98, of which \$336,144.98 is in cash assets and the balance, three quarters of a million, is the additional liability of the subscribers. Net premiums, \$62,739.84; losses paid, \$17,922.09; net surplus, \$51,499.55.

The Individual Fire Underwriters paid a dividend of \$25,000 on the business of 1908, and another dividend of \$25,000 on the business of 1909, to the subscribers. The ratio of losses paid to premiums received in 1909 was 28½ per cent., which, in view of the reduced premium income, resulting

F. A. PAWLEY, Manager

2 Liberty Street,

NEW YORK CITY

from the reduction in merchandise lines, is a very favorable showing

City of New York, Age 5.

The City of New York Insurance Company, of which Major A. White is president, in its annual statement announces total assets of \$1,434,223.06, with a reserve for unearned premiums of \$330,211.03, and a net surplus of \$545,746.11. The company has raised its capital from \$200,000 to \$500,000, and its net surplus is now \$545,746.11. The assets are \$676,390.80 greater than last year and the net surplus is \$332,453.31 more than a year ago. As regards surplus to policyholders the City of New York Insurance Company is now in the millionaire class, the figures being \$1,045,746.11. The company had a prosperous year, which its excellent management well entitled it to have.

Teutonia of New Orleans, Age 40.

The Teutonia, of New Orleans, which has been in operation since 1871, presents a very favorable exhibit of its financial condition at the close of 1909. It has now assets aggregating nearly a million and has built up an excellent line of business. Its statement shows that a reserve of \$507,345 is maintained to meet its unearned premium liability with \$42,475 provided for unpaid losses and \$10,585 for all other liabilities, leaving a net surplus beyond all liabilities of \$138,016 and a policyholders' surplus of \$388,016.

American Fire, Age One Century.

The American Fire Insurance Company, of Philadelphia, presents its annual financial statement for December 31, 1909, showing that noteworthy progress has been made since the company resumed business in 1908. It then had a capital of \$200,000, and practically no surplus, but built up an excellent business, resulting in its now having accumulated assets of \$663,792, and, after providing reserves of \$296,730, exhibiting a net surplus of \$113,804. The management was conducted upon a conservative and economical basis, as may be judged from the fact that its expense ratio last year was only 23.37 per cent. This is the 100th anniversary of the American Fire's existence and should be a decidedly profitable one.

Westchester Fire, Age 73.

The seventy-third annual statement of the Westchester Fire Insurance Company, of which John R. Crawford is president, gives that well-tried institution total assets of \$4,462,134, with a surplus over all liabilities of \$1,431,780. An examination of the statement will soon satisfy any reader

as to the impregnable security of the company.

Liverpool & London & Globe, Age 63.

The Liverpool & London & Globe Insurance Company, of which Henry W. Eaton is manager and George W. Hoyt is deputy manager, has issued the sixty-second annual statement of its United States branch for the calendar year 1909. It shows total assets of \$13,885,802.88, which include real estate amounting to \$1,531,406.12, United States Government 4 per cent. bonds \$467,475. State and city bonds and railroad stocks and bonds \$4,873,130; bond and mortgage, \$3,549,950; bank balances and all other assets, \$3,443,841.76. The company reports unearned premiums and all other liabilities \$8,766,622.58, leaving a surplus of \$5,119,180.30. The New York directors are Charles H. Marshall, chairman; Walter C. Hubbard, John A. Stewart, Edmund D. Randolph and Thatcher M. Brown.

Girard Fire & Marine, Age 57.

The statement of the Girard Fire & Marine Insurance Company, of Philadelphia, reflects great credit. Its assets are \$2,446,044; a reinsurance reserve fund of \$1,490,352, and a net surplus over the \$500,000 capital and all other liabilities of \$407,190; a surplus as to policyholders of \$907,190. During the year just closed it increased its assets by \$80,915; its reinsurance reserve fund by \$37,523, and its net surplus increased \$51,795.

The Home, of New York, Age 58.

The one hundred and thirteenth semi-annual statement of the largest

American fire insurance company is well calculated to give American fire insurance interests a "chesty" feeling when our British cousins boast about antiquity. The Home's total assets on January 1, 1910, aggregated \$27,307,672; its reserve premium fund was \$10,244,415; its total liabilities, except \$3,000,000 capital, amounted to \$16,124,835, and its net surplus over capital and all other liabilities was \$11,182,837; a surplus as to policyholders, including \$1,200,000 reserve as conflagration surplus, of \$15,382,837.

A spirit of progressiveness and independence, in conjunction with verile and intelligent management, have contributed to place the company in the eminent position in the fire underwriting world which it occupies today.

The Granite State, Age 24.

Increases in business and financial strength were made in the twenty-

HOW WILL THE CAT JUMP?

The Fidelity-Phenix-Continental situation and possibilities hold not only the center of the stage in the West, but pretty nearly the whole stage. Scarcely anything else is talked about in fire insurance circles. Managers of union companies are holding many consultations and individually are laying plans for such action as circumstances may render necessary or may not. There is no bravado among the union managers. There is no carrying of chips on shoulders or dragging of coat tails. The union managers do not want trouble. They believe in the strength of their position, but it is far from their desire to have any test. Like prudent men they are preparing for trouble, for it may come, but they are endeavoring in every way to avoid starting anything.

Some difference of opinion is said to have developed as to what course ought to be pursued just at the present time. It is said that some managers think it would be the part of wisdom for a union committee to open negotiations with President Evans. Others see no occasion for such a move at this time. J. H. Lenehan still represents the Phenix in the union and the company is regular in every way. These men naturally ask why the union should anticipate possible irregularities arising. They see no more occasion for negotiations now than at any time for many years past, during all of which the union would have been glad to have Mr. Evans present his application for membership.

Keeping Their Powder Dry.

Managers are studying their situation closely, not only in its Chicago bearings, but in those of the field also. Insurance directories of the various States are being studied with more than usual care. Field men are being asked as to the strength of the Phenix in various agencies, and the complexion of each agency of importance is being scanned with a view to determining what action it would take in the event that the Phenix should retire from the union. It is like a number of generals studying strategy and drilling their forces in preparation for a war which may come, but which they sincerely hope will not and which they will avert if they can without sacrifice of principle.

Meanwhile there is much unrest among Phenix employees. It is impossible that it should be otherwise. Some of them have known no other company. If they have done their work satisfactorily they have been advanced from time to time and felt that their future was secure, as compara-

tively few men have left the Western department of the Phenix. Now the field men have been asked for information as to their salaries past and present, and other points concerning their work. From all appearances the Fidelity is going to be the large end of the Fidelity-Phenix. Employees of the Phenix, whether in field or office, have reason to look for the coming of a "new Pharoah who knew not Joseph." The feeling of security is shaken and some of the employees are looking for other positions.

From the field comes the story that has been some casting about to see whether it would be possible to organize a new company, the Phenix of Chicago, to which a considerable portion of the old Phenix organization might attach itself. This is just field gossip and is not taken seriously.

From several sources comes the report that the new Fidelity-Phenix policies are to bear the names of George E. Kline and C. R. Tuttle as vice-president and secretary, respectively.

Evans Lays the Ghost.

In reply to a "Chronicle" query, President Henry Evans states that he can only repeat what he has already positively and emphatically asserted a number of times, that the Phenix will continue in the union. This should suffice to set all speculation and gossip at rest.

INSIDE THE FIRE LINES.

(Continued from Page 7.)

fourth annual statement. Assets, \$1,109,314; reinsurance reserve, \$517,053, and net surplus over its \$200,000 capital and all other liabilities of \$309,265. The increase in premium income necessitated the addition of \$12,896 to the reinsurance reserve, assets were augmented by the sum of \$81,610, and the net surplus was supplemented by

an increase of \$40,734. There is evidence of a high degree of conservatism and underwriting judgment on the part of the administrative officers.

The Dixie, Age 4.

The youngest of the prominent Southern fire insurance companies closed the year with first-class assets amounting to \$1,342,818, a reinsurance reserve of \$500,631, a net cash surplus over its \$500,000 capital and all other liabilities of \$256,558, and a surplus to policyholders of \$756,558. During the year it absorbed the North State Fire Insurance Company, of Greensboro, and incidentally increased its net surplus by the handsome sum of \$179,564. The statement evidences careful underwriting ability on the part of the administration.

The Rossia (Reinsurance).

The Rossia Insurance Company, of St. Petersburg, transacts only the business of reinsurance in the United States. During its six years it has built up an enviable reputation. Its premium income has assumed large proportions and the business has been of a remarkably profitable nature; its loss ratio on its aggregate premium operations in the United States has been but 58.4 per cent., notwithstanding the fact that the company paid over \$1,600,000 as a result of the San Francisco conflagration.

The United States branch assets, based upon security values as of December 31, 1909, furnished by the New York Insurance Department, amounted to \$3,316,410, an increase of \$406,882 over the resources at the beginning of 1909. The premium reserve required on December 31, 1909, amounted to \$2,188,014, an increase of \$271,103 over the preceding year. After making all provision for liabilities, the United States branch closed the year 1909 with a surplus of \$597,525, an increase over the preceding year of \$7,668.

CHICAGO'S OLDEST AND STRONGEST COMPANY

Robert D. Lay, Secretary, 159 La Salle Street, Chicago.

NEW ORLEANS NEWS.

(Special Correspondence.)

New Orleans.—Much interest has been aroused here by the decision rendered in Mississippi, overruling the demurrer against the Royal and sixty other fire insurance companies in the case of the State in prosecuting against them to recover \$216,000,000 statutory penalties for violation of the anti-trust law.

The decision was rendered by Chancellor Robbins, who at a former hearing had sustained certain demurrers to parts of the original complaint to which the State had submitted an amendment.

The insurance companies must now file direct answers and the case will go to trial on its merits, provided the chancellor exercises his discretion and does not permit the companies to take an appeal from his ruling.

Galveston Cotton Fires.

The cotton fires at Galveston, as well as those in this city, are the subject of a rigid investigation now being made by the underwriters, on suspicion that incendiarism was the cause. Friction has been engendered with the labor element, and to this is attributed by many the losses and crime which has been practically epidemic for several weeks past. Both marine and fire companies are heavily interested, and the impression is gained from an interview with their managers that the investigation will be made regardless of expense.

The class of negro and Italian and other alien labor engaged in handling the cotton is probably the most dangerous and worthless in America, and to this fact is attributed much of the trouble which has marked the variation in the annual reports of the insurance companies.

Texas Rating Board.

The Texas State Fire Rating Board, at its first hearing had in Austin last week, listened to complaints of citizens against the rates fixed by the companies for that State. The board has completed an itinerary which contemplates the principal cities of the State.

Chairman Love stated at the outset of the meeting that there was evidently some misunderstanding of the effect of the fire rating board law and the work of the board under it. He said that absolutely no rates had been made or approved by the board in any part of the State up to this time; that the law did not provide that fire rating board should make fire insurance rates but only that it should reduce them if they were too high, so that they would be reasonable, the

action of the board being at all times subject to review by the courts. He said that it was the duty of the board to carefully and fully investigate the reasonableness of all rates of insurance being collected in the State and to take action reducing any unreasonable rates upon giving the company due notice, and also to set down for hearing upon such notice all complaints filed by any citizen or by the representatives of any city or town; that in pursuance of this provision the rates filed by several companies applicable to the city of Fort Worth had been specifically complained against by certain property owners as to specific rates and by representatives of the city as to their general application, and that this hearing had been called and all the parties interested notified to take up the matter for consideration.

All the board desires to know is that a specific rate or the rates applied in a given locality are deemed unreasonable, and that upon receiving this information they would take up the matter for formal consideration.

"There is abundant evidence," remarks the New Orleans "Picayune," "that the tax on corporations enacted by Congress and soon to come into force is going to be stubbornly contested in the United States courts."

That is one of the things United States courts are for, and can the "Picayune" recall any law curbing privilege which was not stubbornly contested? Whether Congress enacts an anti-trust law, an interstate commerce law, an income tax or a corporation tax, privilege may always be relied on to resist invasion.

The corporation tax will have to stand the test of the courts and so will any other statute that deals with the relations of the public to capital. One of the curious arguments recently advanced against the corporation tax is this probability of a long legal struggle; but if Congress is to confine itself to legislation that will never be assailed in the courts the legislative branch of the Federal Government might as well be abolished. There could be no certainty that even the appropriation bills would not contain material for a lawsuit.

SPRINGFIELD FIRE & MARINE.

Another year of abounding prosperity is recorded in the annual statement of the Springfield Fire & Marine Insurance Company, which, incorporated in 1849, has passed beyond the sixty-year mark of a progressive and beneficent existence. This fine old Massachusetts company entered the gates of 1910 splendidly equipped and managed for the continued expansion of its notable service. The total assets, \$9,761,460.23, include a gain of \$1,241,526.27 during the past year; the net surplus, \$2,716,061.53, advanced by \$814,160.90; the premiums written, \$5,307,622.39, embody an increase of \$382,513.84; and the reinsurance reserve, \$4,369,974.40, was augmented by \$337,954.54. From date of organization to January 1 of this year the Springfield has paid losses to the splendid total of \$46,763,346.40. Under the sagacious guidance of President Damon and his able lieutenants in the office and in the field, the Springfield has rapidly advanced to a high position in the foremost ranks of representative American fire underwriting institutions, and none exceeds it in the esteem of the public as a purveyor of trustworthy indemnity for fire loss.

"The Company With the Pyramid."

"Forty consecutive years of pyramidal progress in assets and surplus" is the grand record of the New Hampshire Fire, which in 1909 added another layer of \$5,196,017.46 assets, including a net surplus of \$1,510,064.23, to the substantial structure of its prosperity. As noted last week, handsome increases in assets, contingent reserve and surplus were secured by the company last year. Under the capable administration of President Sergeant, ably seconded by his home office and field forces, the New Hampshire Fire keeps steadily pressing on a higher pinnacles of achievement.

The company recently was admitted to Virginia, and among the agents it has appointed in that State are the following: Norwell B. Walker, Richmond; L. T. Hanckel & Son, Charlottesville; Patton & Noell, Danville; Ivey & Kirkpatrick, Lynchburg; Walke & Son, Norfolk; W. F. Perry Corporation, Staunton.

At Lincoln, Neb., Charles M. Hall and P. F. Zimmer have been appointed to represent the New Hampshire Fire.

Massachusetts Legislature.

Among recent petitions introduced in the Massachusetts House are the following: Introduced by Mr. Barlow, of Lowell, of Edward Marsh, that insurance agents may have commission on policies on their own lives; by Mr. Carleton, of Chelsea, for a law to prohibit combination by fire insurance companies and agents to increase fire insurance rates; by Mr. Cox, of Boston, from Erving Winslow, for a system of State life insurance; by Mr. Crane, of Cambridge, of Merton S. Keith, Jr., and others, for the incorporation of himself and others as the Massachusetts Annuity Fund Insurance Company.

George P. Field has petitioned for an addition to the law providing for sprinkler and plumbing damage insurance, by permitting also insurance against loss and damage caused by a rising of the waters of the ocean and its tributaries.

Representative Carleton, who did the same thing last year, has filed a bill embodying a valued policy law.

For a Saner Fourth.

Dr. Scannell, of the Boston school committee, has prepared a lecture advocating a saner Fourth of July, and has enlisted the co-operation of a number of eminent physicians, who are to deliver it before Boston school children and their parents during February and March. The lecture sets forth the dangers of blank cartridge wads, cannon crackers and the terrible suffering when lockjaw ensues.

Mutual Life.

The notable results achieved by the New England Mutual Life Insurance Company, of Boston, Mass., received attention in last week's issue of "The Chronicle," which this week takes pleasure in presenting to its reads the sixty-sixth annual statement of this staunch and progressive old institution. A comparison of this statement with the one of a year before brings out the following admirable showing on a paid for basis:

Gross assets	\$51,269,293; increase.....	\$3,307,587
Total liabilities	47,050,672; increase.....	2,591,295
Net surplus	4,218,620; increase.....	716,292
Distribution for 1910.....	1,300,000; increase.....	100,000
New premiums	860,582; increase.....	172,827
Renewal premiums	5,947,729; increase.....	180,250
Total premiums	6,808,312; increase.....	353,077
Total income	9,162,783; increase.....	488,828
Payments to policyholders..	4,710,055; increase.....	65,787
Total expenses	1,411,458; increase.....	128,724
Total disbursements	6,224,696; increase.....	183,270
Income over disbursements..	2,938,086; increase.....	305,558
New paid business.....	23,427,325; increase.....	5,462,079
Terminations	10,848,411; decrease.....	1,075,297
Increase of insurance in force	12,578,914; increase.....	6,537,376
Total in force.....	197,492,772; increase.....	12,578,914
Outstanding, not reported...	1,394,559; increase.....	724,149
Policy, average amount	2,622; increase.....	186
In force, average amount....	2,373; increase.....	19
Actual mortality, 1909.....	57 per cent.; in 1908.....	64 per cent.

The Employers Liability.

The United States Branch of the Employers Liability Assurance Corporation comes to the front, as usual, with a fine statement, summarizing the results of the activities of 1909, at the end of which year it shows assets of \$5,068,420, of which \$3,151,438 figures as reserves and \$1,911,982 as surplus to policyholders. The corporation has a deposit with trustees and insurance departments for the benefit of policyholders in the United States a total of \$4,434,172. The excellent service performed by this sterling institution and its continued prosperity reflects credit upon Samuel Appleton, of Boston, United States manager, and the corps of skilled underwriters under his direction.

Bohm Resigns.

Boston, Feb. 2 (Special).—Julius Bohm, general agent of the Columbian National Life, of Boston, for the Pacific Coast, has to-day resigned, and his resignation has been accepted. The agency force on the Pacific Coast will hereafter conduct its business direct with the home office. Practically all of the managers under Mr. Bohm will continue with the Columbian National on the new basis.

New England Brevities.

At the annual meeting of the Life Underwriters' Association of Central Massachusetts, last week, Otis D. Arnold was elected president; W. Gray Harris and E. P. Cerie, vice-presidents; Chester E. Greene, secretary; W. Gray Harris, chairman executive committee; E. P. Cerie, chairman membership committee; L. V. Bailey, chairman legislative committee.

The Massachusetts Bonding has applied for admission to Montana, and has selected Edward C. Murray, formerly with the United States Fidelity & Guaranty, to be branch manager, with headquarters at Helena.

THE POWER OF HABIT.

The dearth of good field men available for vacancies in the West is more than usually apparent now. For months past one or two very fine positions have been standing open, and, although there were many applicants they still remain open. Lately the number of desirable vacancies has been increased by promotions or deaths and it is hard to tell where men are to be found to fill them.

Apparently there is coming to pass what was predicted years ago. The present system of conducting the business does not train men for the field. With forms prepared, rates made by inspection bureaus, adjustments made largely by the Western Adjustment Company, the average local agent has little to do but get business. If he is a successful local agent and really learns the business, he does not want to be a special agent, and if he is not successful as a local agent the companies do not want him as a special agent. Accordingly many companies undertake to fill their field vacancies by sending out men who have been trained as daily report men. Some of these make good and some do not. Some of them have had little experience in dealing with men face to face and some of them have become so accustomed to look for reasons for declining risks that they carry their critical tendencies into the field with them and make their companies unpopular with the local agents.

ALL-NIGHT LIFE AGENCY.

"I thought that New York was going some, even for New York, when they started the Night and Day Bank," said the cashier on the lobster trick in an all-night restaurant at 3 a. m., "but that fellow who went out just before you paid your check has them faded. He is an all-night life insurance man. He figured that it was pretty easy money getting next to men like me, clerks in hotels and cigar stores, at times when business is slack, so now he sleeps in the daytime. I just put in an application for \$1,500 myself."—New York "Sun."

HOPELESS.

"I have to say that I am not making any prediction as to the chance of getting Federal supervision, nor as to its form or its scope.

"I am hopeless about conditions under the present system of supervision, and am simply putting matter into the mill of discussion in the hope that there may somehow and some time result grist of value."—Geo. F. Seward.

EXCESSIVE FIRE LOSSES.

New York City's Fire Commissioner has in process an investigation to determine the cause of the epidemic of fires that has recently swept the city, and says he has reached the conclusion that the number would be greatly reduced if the laws relating to protection against fire were enforced by and against the owners, agents and janitors of buildings.

The commissioner has decided to take action to secure such enforcement; and under the conditions now existing, and the elimination of Tammany grafters, there is every prospect that better conditions will immediately follow.

To further the plan, the commissioner intends to have the fire alarm telegraph bureau, its connecting cables and the battery room in a totally separate fireproof building. The Merchants' Association and the New York Board of Fire Underwriters demand an entirely new fire alarm service.

The old headquarters building is not to be abandoned. The commissioner will retain his office there and the bureau of combustibles and Chief Croker will stay in the old place. The old and the new headquarters are connected by a passageway at each floor.

REFUSES CHRISTIAN SCIENTISTS.

The Des Moines Life has practically concluded to issue no insurance policies to Christian Scientists. A policy of \$10,000 has just been paid by this company to the heirs of Paul L. Parks, of Parksville, Miss. Mr. Parks, when taken ill, refused to employ a physician, and his death ensued ten days later. Mrs. Parks, following the receipt of the \$10,000, sought to take out a policy for \$5,000 upon her own life but because of her non-belief in physicians the company refused the application.—"Western Underwriter."

PRAISES HOTCHKISS.

The Co-operative Fire Insurance Companies of New York State held their twenty-eighth annual convention at Syracuse on last Monday. One hundred and forty companies were present, representing 5,000 members and \$495,000,000 of insurance.

One of the principal actions of the convention was the adoption of a resolution commending Superintendent of Insurance Hotchkiss, in these terms:

Resolved, That the legislative committee appointed at the meeting be instructed to convey William H. Hotchkiss the indorsement by this organization of his administration as Superintendent of Insurance, and express to him our desire to co-operate with him in securing the enactment of such laws as shall best serve the interests of co-operative fire insurance and through it the people of New York State.

L. P. Funkhouser has resigned as secretary of the Farmers & Merchants, of Lincoln, Neb., because of continued poor health, and is succeeded by S. A. Barclay, who has been assistant secretary. Mr. Barclay was formerly superintendent of the Milwaukee Board, and has been a field man, rater and inspector in the West for a number of years.

THE HISTORY OF ISCARIOT REPEATED.

(Continued from Page 1.)

the dives and resorts of Brooklyn and Coney Island.

The next year the Bankers Surety Company was represented by James McGinty, who had been associated with various surety companies as their excise agent, but who is not a surety man.

The Triple Alliance.

At that time there was established a co-operation between the surety companies, the Brewers Board of Trade and the Committee of Fourteen, by which it was intended that the disorderly places of the city should be closed by inability to secure a bond. The co-operation for the five months of that period (the excise year being then changed to October 1) was reasonably successful, the disreputable places being forced to secure personal bonds. With the re-writing of the bonds on October 1, 1908, the Bankers Surety Company, though a member of the reinsurance association, took advantage of the looseness of the re-insuring agreements and wrote all the extra-hazardous places which had been refused by the reinsurance association and the United Surety, under the co-operation as above stated. The Bankers Surety Company at that time offered as the excuse for their action, that it was necessary for them to recover upon the losses upon the bonds written by Reister. The question arises immediately, were they not plunging in only further, for while they might secure some salvage upon the former loss and some extra premium for the new bonds, they had incurred the full liability of \$1,800 upon yet another bond.

It might be noted in passing that this excuse was not offered by the companies which, doing similar business in earlier years, suffered similar losses.

Until June, 1909, the Bankers continued to write the extra hazardous bonds of the objectionable places. With the approach of the new writings for 1909-10 efforts were made to make complete the co-operation between the surety companies, the breweries and the Committee of Fourteen, and for some time it appeared likely that this would be accomplished. Immediately after September 1 the rumors became definite that the Title Guaranty & Trust Company of Scranton would enter the field independently of the co-oper-

ators. Thereupon the Bankers Surety Company, by McGinty, announced that it would again write the places which were refused by the reinsurance association, and for a third time wrote this extremely hazardous business.

While the Committee of Fourteen may urge the moral side of the question of writing bonds for places which are disorderly, the practical question for the surety man is that of the risk due to the character and reputation of such places.

An Insult to Insurance.

It is reported that the Bankers Surety company has sought to write this business strictly upon an insurance basis. There is no underwriting basis for such risks.

It should be known that under the amendment of the law proposed by the Excise Department and passed in May, 1908, a practical monopoly of the business was created for the corporate surety. The amendment provided that personal sureties must qualify with unencumbered real estate. This was deemed advisable by the commissioner after his experiences with the law permitting encumbered real estate. With the old law in force personal bonds cost from \$500 to \$750.

For a surety company seeking this business there is under the circumstances only two courses to pursue.

(1) Charge all the traffic will bear, and this is what the Bankers is reported to have done, getting, it is said, premiums of \$1,000, and

(2) Demanding full security and getting a small premium. This latter is reported to have been the method of the Title Guaranty & Surety Company. It is understood that the company wrote but a small part of such extra-hazardous business.

Between the two methods there is this decided difference when the business is done through an agency upon a commission basis: The absolute cost

of the first method is extremely high, making the business very tempting to the agent, hence it is the method he would advocate. The second method gives absolute security to the company and only a small commission to the agent.

Because of the situation created by the way in which business was done last September, there is a movement which has the support of the Excise Commissioner to amend the excise law to abolish the monopoly created by the personal surety amendment, by providing that a cash bond can be given, or, rather, its equivalent. It is proposed that the commissioner be authorized to accept in lieu of a surety or personal bond, an assigned certificate of deposit of a State depository for \$1,800. It is argued that few will risk this form of bond since it would be a notification to the commissioner that there had been difficulty in securing a bond of the other kinds. Under departmental practice, this is not correct, for actions are determined upon before the parties at issue are known. Until the formal papers are drawn, only the name of licensee is known to the officers who determine the actions.

The Court Was Open.

The method by which the reinsurance association and the managers of the United Surety Company decided what places they would refuse to write was one which was intended to do justice to all and as far as possible eliminate the personal factor. A list of places compiled from the records in the possession of the Committee of Fourteen was submitted after consultation with Messrs. Sheridan and Reilly to the Brewers Board of Trade. It is understood that the brewers of the city were each supplied with a copy of this list and notified that appeals for the correction of that list would be heard by a joint committee. That committee consists of the president of the

Brewers Board of Trade, the ex-president of the United States Brewers Association and other representative brewers, including the largest brewer in New York City, together with Manager Edward C. Lunt, of the Fidelity & Casualty, and Messrs. Sheridan and Reilly and representatives of the Committee of Fourteen. This committee held two meetings and heard and passed upon all objections that were made. Thus the responsibility for the list belongs to the joint committee and any brewer or individual who felt aggrieved had every opportunity to be heard. Moreover, there was established at the time a method by which the promises of a proprietor, supported by the endorsement of his brewer, would be accepted that he would make his place conform to the general regulations prescribed by the committee. Thus the attempt was made to do justice to everyone, and yet to disassociate the brewers from the disreputable part of the business and to relieve the bond companies of the odium of knowingly being participants in a business, the profits of which are beyond question "dirty money."

Something Coming.

This disclosure concerning the business of making excise bonds, the methods pursued, the grafting that it entails and all the sordid details have aroused those most interested—financially and morally—as never before and there is in prospect an early development that may clear the murky skies.

President George F. Seward, of the Fidelity & Casualty, who is the actual head of the reinsurance association, has been reported as having made some rather warm and significant remarks since the recent racket started.

It is also stated that Dr. Peters, of the Committee of Fourteen, is sitting up and taking notice "touchin' on and appertainin' to" present conditions. The brewers in annual State convention last week also gave clearest evidence of agitation over the subject and on paper at least promised to make their patrons be good.

Interesting developments are pending and "The Chronicle's" intimate knowledge of the workings of the "Gideon's Band" of this abominable traffic will enable it to keep the subject alive and moving.

Courtenay Baylor, formerly general agent at Boston of the Phoenix Mutual Life, has been appointed manager for that company at Providence, R. I.

FEDERAL UNION'S CHICAGO CHANGES.

The course of the Federal Union Surety in Chicago will be watched with some interest. For four or five years the company has done practically nothing in the city. After the Federal Union and Montgomery & Funkhouser parted company, it opened a little office of its own in charge of C. B. Gould as manager. Mr. Gould's work kept him out in the field nearly all the time and he had no opportunity to build up a city business. Something over a year ago he resigned and the company shortly afterwards entered the fire agency of W. M. Umbdenstock & Co. There the business was in charge of W. P. Cooper, who had been Mr. Gould's clerk. The agency had to submit too many cases to the home office to compete readily with other Chicago general agents who, as a rule, have very broad powers of attorney. Now the Federal Union has appointed as general agents Meeker & Magner, general agents of the General Accident, a high-grade casualty office, and Walter E. Hart has been secured to manage the bonding department. Mr. Hart received his early training in the home office of the Fidelity & Deposit, was then on the road for the same company as special agent and for the past year and a half has managed the bonding department of the Massachusetts Bonding in the general agency of Moore, Case, Lyman & Hubbard. With such equipment, there appears to be no reason why the Federal Union should not "loosen up" in Chicago and do such a business as other companies of similar size do.

STANDARD ACCIDENT.

The 1909 annual statement of the Standard Accident of Detroit evidences its usual satisfactory and steady growth.

The company added to its surplus during the past year \$205,753.18 besides increasing its reserves \$92,768.11. In addition to the reserves required by law the Standard has a reserve for contingencies of \$150,000. This item was increased \$50,000 during the past year and certainly shows conservatism on the part of the management. In its twenty-six years of business each year has shown increases. The Standard has paid claims to its policyholders amounting to over \$12,000,000.

UNIFORMITY RUN RIOT.

The uniformity craze which has been sweeping the country generally from insurance blanks to the price of meat and the cost of divorce has at last invaded the National Association of Local Fire Insurance Agents, and a committee, of which C. F. Hildreth is chairman, is now wrestling with the proposition to "require" all companies to adopt policy forms and other blanks used by them of uniform size, shape and wording. It is stated that progress has been made, and undoubtedly it would be of practical economic value if the committee can bring it about.

Of course, uniformity of the wording for the policies and forms, is an iridescent dream, but uniformity in size and general make-up of the printed forms is easily practicable and would be a very sensible idea to adopt.

FOR A FEDERAL BUREAU.

Washington, Feb. 1 (Special Correspondence.)—The long agitated subject in Congress of a Federal Government bureau of mines—meaning control—had a lively session for a few hours in the House last Tuesday.

The discussion arose over the pending bill (H. R. 13915), the main feature of which is section 2, which provides:

It shall be the province and duty of said bureau and its commissioner, under the direction of the secretary of said department, to foster, promote and develop the mining industries of the United States; to make diligent investigation of the methods of mining, the safety of miners, the possible improvement of conditions under which mining operations are carried on, the treatment of ores and other mineral substances, the use of explosives and electricity, the prevention of accidents and other technologic investigations and inquiries pertinent to said industries. * * *

The immediate provocation for the debate was due to the presentation by Congressman Douglas of a resolution passed by the Ohio Legislature on the Friday preceding urging Congress, in view of the number and character of serious accidents occurring in the best equipped mines in various States, it is evident that many years of research and educational work on the part of the General Government will be necessary to enable the several States to meet by appropriate legislation that better protection shall be provided for its industrial workers; and that the bill now pending in Congress providing for the creation of a National Bureau of Mines, be passed forthwith.

There was also presented a resolution passed at the 21st annual convention of the United Mine Workers of America, representing 300,000 organized miners directly and 700,000 men indirectly, urging the enactment of the measure.

Portentous Words.

Representative Cox, of Indiana, voiced the strongest active advocacy of the measure in these very strong words:

"In many respects this is the most important piece of legislation which has come before Congress for many years."

This represents one view, but there is a surprisingly large conservative sentiment against the measure, as is usual when an influential and presumably technical expert adverse opinion is presented to Congress, as was done in a communication in the very able and highly responsible "Engineering and Mining Journal" in its issue of last week, introduced by Congressman Slayden, of Texas, in back-

ing up the stand of Congressman Tawney, of Minnesota, in opposition to the measure.

The discussion following was at least enlightening in the sense that it illustrated the varying degrees of statesmanship represented in Congress.

The gamut of the demagogue was run to the limit, beginning with absolute paternalism and ending with State rights. It covers 25 pages in the record of the day and the pro and con is interesting, especially the latter. One of these was the argument advanced that the mine bureau bill was simply a scheme of owners of Western mining properties to have their ores assayed at public expense in order that the official Government report would enable them to unload worthless properties on the public. Another, that it simply created another graft at Washington.

Only Shallow Pates Heard.

The singular feature of the whole discussion was that the main intent—preservation of life by prevention of mining accidents—was backgrounded. And not a single mine owner or miner was on record other than in favor of it. The highly esteemed profession of mining engineers, assistants, apprentices, etc., are generally opposed because it is an invasion of their present or of prospective monopoly, presumably on the same principle that its money order and postal system is an unwarranted invasion by the Government of the banks and express companies private and exclusive privilege, and an abridgment of the constitutional right of contract. (What an emergency sanctuary in stress of ignorance is that belabored Constitution!)

Present indications are that the bill will be considered by Congress on the judgment of representatives from coal mining States where the great losses of life have occurred and their attitude on the subject has been pretty clearly demonstrated. The engineering opponents' case is liable to be knocked into smithereens because of its alleged selfish and ulterior motive.

Employers Liability Bill.

The commission appointed by New York, Wisconsin and Minnesota to examine the subject of employers liability, and report and handle arguments on the compensation bill, held a session here on Saturday, which was attended by a number of delegates from many States and under the auspices of the Federal Government.

Commissioner of Labor, Charles P. Neill, presided.

A resolution was adopted at the

opening session asking the Department of Commerce and Labor to send an expert abroad to inquire into the cost to employers of compensation laws now in operation. The effects of the laws in Germany, England, Austria and Sweden are particularly sought. The conference also appointed a committee to call upon the Secretary of State and ask that the members of the consular service inquire into the employers liability legislation in foreign countries. Of this committee George M. Gillette, of Minneapolis, was made chairman.

The conference was adjourned to meet in Chicago July 10 next, after a committee had been appointed to draft a compensation bill to be presented to Congress. The committee which will draft the bill is composed of H. V. Mercer, of Minnesota; Henry R. Seager, New York; A. W. Sanborn, Wisconsin, and Miles M. Dawson, New York.

HORRORS!

"Now," said the architect to the insurance magnate, "that you are to settle here, you want a comfortable residence. Would you prefer in this new house a southern exposure?"

"Good heavens, no!" cried the magnate, with a shiver of horror. "Any kind of exposure is just what I don't want."—Boston "Courier."

A CANDID FRIEND.

The following communication has been received by "The Chronicle" from a friend of such long standing that it is prudent to avoid the figures in years. It almost causes a lament, but candid friends who travel about have some unwritten license, like that of poets, which commands and demands recognition.

"The Chronicle" values news and unhesitatingly plumes itself upon printing it, not all, of course, for that is manifestly impossible under human limitations, but what it does print is news, not mere cribbings and clips.

To be equally as frank as this candid friend and in the same spirit of ethical uplift that inspired it, the communication, in part, is given herewith:

On page 15 in your issue of January 20, under the heading of "Going Into Casualty Lines," you give a send-off to the Pacific Surety Company in connection with Mr. Wolf's association with that company. On page 23 of the same issue you refer to Mr. Van Laningham in terms which speak for themselves. Possibly you are not aware of Mr. Van Laningham's connection with the Pacific Surety Company, and I cannot say that I am aware of it, except by inference. The present conditions seem to point largely to such connection.

The purchase of the stock of the Pacific Surety Company was recently made through a party purporting to represent large Eastern interests. This party was, as near as I can learn, Mr. Van Laningham. The stock of the company, which had a market value of \$105 per share was purchased in this negotiation for \$150 per share; the stock was paying 6 per cent. on the par value of \$100; it consisted of twenty-five hundred shares of the par value of \$100 per share. Mr. Van Laningham has opened large offices in San Francisco for the sale of stock; I think for the sale of the Pacific Surety Company's stock; the par value of this stock has been reduced from \$100 per share to \$1 per share; the number of shares made 500,000, increasing to 1,000,000, and the shares are being offered to the public at \$2.50 per share or on the basis of \$250 per share at the old par value. This offer is accompanied by a statement of financial returns of the various companies in 1908, showing that the Employers Liability Company made a profit of 410 per cent., and the Fidelity & Casualty Company of over 100 per cent., etc.

I think the information I have here given you is absolutely correct in every respect; inquiry would verify it or not; if it is correct it remains, of course, for you to determine how far the Pacific Surety Company is establishing stations to furnish electric current or has grasped a live wire.

This is good reading, but it is of little or no specific interest, even if true, to anybody but the Pacific Surety Corporation. It has had a

long, honorable and successful career, and there is no reason to anticipate its having an apoplectic fit just now. Of course its friends would be regretfully surprised if it were led into the dubious and unnecessary paths of promotion schemes in order to place additional stock for an increase of capital. The business of promoting insurance stock sales by the same methods employed by the vendors of mining shares and golden dreams has been such a ridiculous failure as to be pitiable. Every considerable State insurance department has forbidden it, and one has gone so far as to legislate against it, and in another column is the news that one more proposes to do so.

As an illustration of the work of the insurance company promoters it is only necessary to glance around the country and see the bantlings they have half created. If life insurance circles it has already been proposed in the presidents association that means be adopted to rescue these weak and incompetent concerns and save the innocents who were gulled out of honest money.

In casualty and surety circles it is only necessary to glance at the laughable plight of half a dozen "promotions" in Philadelphia and a dozen others West and South. There is also that wonderful concern in Chicago headed by the equally wonderful and Honorable Bob Armstrong, of prolific promises.

But, as already stated, it is nobody's business but the Pacific's, and until there is some real live developments everybody had best sit down and not try to hold their breath.

That snicker you have been hearing came from behind the barn, where the insurance man, the coal man and the ice man are discussing the meat man's troubles.—Des Moines "Register."

ADDRESS, AGENCY DEPARTMENT,

The Empire State Surety Co.
NEW YORK

SEEING THROUGH A GLASS DARKLY.

Were Chicago burglary insurance men much interested in burglary insurance, they would have been on needles and pins the first few days of last week. While the New York papers announced that the Chicago situation had been fixed up by the Burglary Insurance Underwriters Association, not more than one or two companies took the trouble to notify their Chicago representatives what they had done for them or done to them, until the week was half gone.

The first report that reached Chicago was from a company not represented at the meeting. From later reports received by other offices, it appeared that this company had not been correctly informed as to what was done in New York, as the commissions it reported as agreed upon were 5 per cent. higher than those reported to other offices.

So far as commissions are concerned it is probable that the action taken at New York was the best possible under the circumstances. There are some general agents in Chicago who are opposed to paying more than 20 per cent. for residence business to any broker, while the agreement calls for 25 per cent. on this class to class 1 members of the Chicago Board of Fire Underwriters. One or two offices intimate that they will not pay over 20 per cent. regardless of the agreement, even though such a course results in the loss of their business.

However, 25 per cent. to class 1 agents and 20 per cent. to other brokers for residence business was the brokerage paid by two or three offices last year before any efforts at a local agreement were put forth, and some of the offices which were not paying these figures believed that eventually it would be necessary to give a differential to class 1 agents who handle the accounts of their brokers. In fact, the agreement adopted in New York is about what one prominent manager in Chicago proposed months ago.

The Center of Disturbance.

The disturbing factor in the Chicago situation was the announcement that the American Bonding Company no longer is a member of the Burglary Insurance Underwriters Association. This leaves it unaffected by any agreement the association members may enter into and consequently free to go on paying whatever it pleases in Chicago. As the agreement provides for no differential in favor of casualty as against fire agents it is, of course, not satisfactory to the

Chicago representatives of the American Bonding.

Quint Is Willing.

Recently one or more of the Chicago representatives of other companies have talked over the situation with A. U. Quint, associate manager of the American Bonding, and were led to believe that a compromise that he would accept was not impossible to be secured. He is reported to have intimated that an understanding could be reached if an agreement could be secured among the fire agents that in the exchange of business burglary insurance should not be counted as an offset for fire insurance, or vice versa. Some of the burglary insurance men who are also fire agents have insisted that this exchange business cuts no figure and they probably would enter into such an agreement. It is not certain that all would, however, unless they found it the only way of putting a stop to the American Bonding's paying excess commissions. While the American Fidelity will not enter any local conference, the rates of commission agreed upon are those which it has always paid in Chicago, so no trouble should be anticipated from that source.

If the companies enforce the Chicago agreement it will cause some readjustments, as certain offices have more than two policy-writing sub-agencies, the number said to have been agreed upon in New York.

THE AETNA'S NEW YORK CHANGES.

The combined announcement and invitation of the Aetna on the front cover of this issue is of keenest interest to the casualty and liability brokers of New York and vicinity, and its results must be immediate and effective.

The former management of the New York office had aroused influential antagonism and animosity that clearly demonstrated the value of the personal equation as an asset to any company in dealing with the insurance "street."

The reorganization of the office will undoubtedly be manifested in a heavy increase of business for 1910.

THE ELEVATOR HAZARD.

Until the advent of automatic elevators, cars that start and stop of themselves, that open and close doors at landings without the aid of an operator, there will be an element of uncertainty in the activity of all elevators—the human element. In the last analysis of an elevator's potentiality for damage, it matters not how perfect the mechanism and the condition of the car, we cannot eliminate the possibility of fatal accidents so long as the goings and comings must be controlled by the hands of men, hands directed by brains that at any time may be inefficient because of overconfidence, carelessness, weariness, or mere animal good spirits.

A series of deaths from elevator accidents, happening recently in New York, demonstrates three things of interest to the owners of lifts—that operators of long experience grow lax from too great familiarity with their work; that it is practically murderous to entrust an elevator to an inexperienced and superficially instructed man; that public opinion has decided to hold elevator operators, and their employers to a stricter accounting for accidents.—"The Budget."

DEATH OF TREASURER BROWN.

The death of Edgar E. Brown, of Providence, R. I., on last Friday, added another to the unusually long list of fire underwriters of the past season.

Mr. Brown belonged to that steady and conservative element which has ever been content to abide by the axiom, "Live and let live." He had been treasurer of the Starkweather & Shepley general agency since 1879, and was their chief accountant.

Mr. Brown was a man of quiet and modest tastes, of highest integrity and geniality, and inspired and held the unbounded confidence and respect of the circles in which he moved, and his death will be a great loss to insurance and social interests of New England.

The funeral occurred on Tuesday and the large attendance attested the wide circle of friendships enjoyed by Mr. Brown and his family.

Thornton Chase has been appointed general agent for the Union Mutual Life at Los Angeles and will act as superintendent of agents for the Pacific Coast. For sixteen years he was superintendent for the Middle West in Chicago.

NOTEWORTHY ADVANCE.

The
BERKSHIRE LIFE
Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,
takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy incontestable, and no restrictions upon residence, travel and occupation, after the first policy year, except as to military or naval service in time of war.

Right of the Insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

A SPECTACULAR JUDGE.

Surety men at Chicago are annoyed at the action of Judge Keneshaw Mountain Landis, of the United States District Court, in ruling out corporate bonds. That Judge Landis is regarded as erratic and spectacular in his methods does not make the loss of the business any pleasanter. The action is on a line with his \$29,000,000 fine of the Standard Oil and his claim within the past days that he, rather than the Department of Justice, had started the investigation of the alleged packing trust by the Federal Grand Jury at Chicago. His ruling on surety bonds is looked upon as something of a gallery play. Nevertheless, the business is gone, at least for the present. One or two Chicago offices have taken the subject up with their home offices to get the opinion of counsel as to the possibility of legal action to reinstate the companies in what they regard as their rights. One office, at least, believing that Judge Landis has acted upon misinformation and not for effect, is seeking an application for a bond to be filed in his court to give an opportunity to present facts to him on a concrete case, hoping that he will amend or repeal his ruling.

Speak Easy.

The fact that Judge Landis has given many receiverships to a certain trust company—possibly because it handles them in a businesslike way—has called out the suggestion that his action was taken partly for the purpose of shutting off applications for appointment as receivers from others. The individual attorney or business man does not enjoy seeking bondsmen. An officer of a trust company does not have to seek them, the other officers or directors are ready to sign his bonds as a matter of business.

An amusing feature in the case is that since he made the famous ruling Judge Landis had occasion to get a large probate bond himself and he went to a surety company for it. It is easy to see how it would be improper for the Judge to place himself under obligations to individuals who might in future be litigants in his court, but not easy to see why receivers and trustees should place themselves under similar obligations to men who may be claimants against estates they are handling.

It is suggested that Judge Landis inherits largely of the spirit which actuated his father in naming him in commemoration of his birth on the date of the great battle of Keneshaw Mountain, one of the crises of the Civil War, and he is subconsciously living to it.

BANK DEPOSIT INSURANCE.

Harry M. Rubey, in becoming president of the million dollar American Bankers Assurance Company, of St. Louis, has broadened the field of his business activities. He is one of the best known and most successful business men in Missouri, and has already infused life and blood into the company by strong additions to the board of directors, and mapped out a plan which seems to warrant the promise of quick success in getting the company into readiness for writing bank deposit insurance. Mr. Rubey is ably assisted by J. B. Christensen, general counsel, and John Kennish, former insurance commissioner, associate general counsel. It is the general opinion that the company will be a successful enterprise, prize.

MAKING PROGRESS.

The Railway Assurance Company has been registered in Saskatchewan.—"Insurance Chronicle," London, January 15.

When the Ahkoond of Swat visited London there was a mild diplomatic sensation, due to the simple fact that nobody knew what an Ahkoond was or where Swat is. Guessing catches always, and London generously received and entertained Barnum's "Cardiff Giant." Now Saskatchewan affords it news and opportunity. London always looks abroad. It's more polite and certainly more profitable. There's a reason.

The Assurance Company is to be congratulated upon its acquisition of recent registration, as noted. "The Chronicle" awaits the explanation of what and why and how and when, confessing in advance, by way of avoidance. (See Blackstone.)

It is reported that the Industrial Surety Company of 41 Park Row, guarantors of patents, will enter general lines.

HOME OFFICE OF THE

'Metropolitan Life Insurance Company

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE.

This company has more premium paying business in force in the United States than any other company, and for each of the last 15 years has had more New Insurances accepted and issued in America than any other company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburgh, Baltimore, New Orleans and Buffalo.

Assets.

United States, City and R.	
R. Bonds and Stocks.....	\$99,630,935.56

An Important Investigation of Female Mortality.

British Offices' Experience, 1863-1893, Discussed and Graduated.

On December 20 last, Charles W. Kenchington, F. I. A., of the Prudential Assurance Company, of London, read a paper before the Institute of Actuaries on the "Mortality of Female Assured Lives With Graduated Tables Deduced From the British Officers' Experience 1863-1893.

Previous to the reading of this paper, the only female life tables deduced from this experience were certain premium and reserve tables included in a paper read by James Chatham, F. I. A., F. F. A., before the faculty of actuaries.

Proportion of Female Lives.

The percentage of the total number of lives investigated which is represented by insurances on the lives of women was but 7.33 per cent., the smallest proportion being in limited premium policies and the largest in joint life insurance and contingent survivorship insurance.

The relative proportion of women's lives covered by insurance in the British companies, has diminished since 1863 from 11.31 per cent. to 7.33 per cent.

Women appear to have preferred non-participating insurance. Of the lives insured on that plan they comprise 16.18 per cent. as against 5.84 per cent. in the participating class.

Upon the endowment plan a much larger proportion of the women insuring are unmarried while upon the life and limited premium plans a much larger proportion are married. On the whole, married women much outnumber single women among those who are insured.

Mortality Higher From 15 to 45.

The same situation is found in the present investigation as in past investigations, viz: that while, on the whole and taking all ages into account, the mortality among women is lower than among men, this is not true from age 15 to about age 45 and this is accounted for by Mr. Kenchington as follows:

1. The relatively large proportion of married women amongst assured females, as compared with the general population. This has the effect of giving increased weight to the special risks attendant upon childbirth.

2. The medical examination prior to assurance is much less searching in the case of female lives than in that of males.

3. Women, by their nature, more readily conceal material facts than men do.

4. Assurances effected on female lives for financial purposes bear a larger proportion to the total assurances on lives of their own sex than is the case with male lives.

Both Select and Aggregate Tables.

The graduation is made by a new formula developed from other summation formulas, the method, which is very ingenious, being described in the paper. It was found by actual trial to produce a table representing the actual facts of the investigation very accurately.

The material is worked up in the form of a select table, exhibiting the effects of medical selection in the earlier years and finished out by an ultimate table representing all the years of exposure after the fourth. It was found that the benefits of fresh medical selection had been quite exhausted by the end of the fourth policy year.

Aggregate tables have also been prepared mainly for purposes of comparison.

Features of the Mortality Rates.

The mortality according to the general select table for female lives is for the first year of insurance up to age 61 greater than the corresponding select table for male lives based upon whole life insurances. On the other hand, the mortality according to the ultimate table is lower than the mortality according to the ultimate table for male lives at all ages under 30 and all ages over 44.

The mortality for the first year of insurance under the select table for female lives is higher at age 20 than at subsequent ages up to age 32. Thereafter, it increases until age 45 and then diminishes slightly to age 49 after which it increases steadily.

The male ultimate table omits the first ten years of insurance while the female only omits the first four years; but, as the effect of medical selection appears to have thoroughly worn off within the four years in the one case and not until after the ten years in the other case, the comparison of the ultimate tables, although deduced from different years of insurance, appears to be justified.

High Initial Mortality at Young Ages.

A peculiar feature of the select table of the female lives is that, especially in the younger ages, such as age 20, the mortality is higher in the first year than it is after the benefits of fresh selection are worn off. Thus, for instance, it is 7.11 per thousand in the first year, at age 20, 7.73 in the second year, 8.41 in the third, 7.07 in the fourth and only 5.71 in the fifth.

This peculiarity does not obtain throughout, however, but in the younger ages the mortality of the first year of insurance is heavy. At age 35, on the contrary, it is but 5.47 per thousand while five years later it is 11.47. It is thought that this difference is due to "less effective medical examination as compared with males."

Heavier Lapses Among Women.

Another peculiarity of the experience is "that the withdrawals are proportionately much greater amongst women than amongst men in the case of whole life assurances, particularly of the younger ages and of shorter durations."

Premiums Required Higher Than For Men.

Tables of premiums and specimen values for the select tables are also included, showing that for whole life insurance, as compared with male lives an extra premium in no case exceeding \$1.26 per \$1,000 of insurance is required. Under endowment policies where the premiums are for a short period only, and that, the period where the largest mortality among women is to be found, an extra premium as large as \$1.77 is indicated and under term insurances for short periods an extra premium as large as \$3.78 is indicated. Most of the required extra premiums however, are much smaller than these amounts.

The author does not think, however, that these computations are entirely determining as to the extra premiums which should be charged. Concerning that matter he expresses the following opinion:

If death were the only cause for cancelment of policies the extra premiums would suffice to meet the extra risk, but in view of the withdrawals by surrender or lapse of those who have had the benefit of assurance during the years of life in which the extra risk is incurred, and who do not remain on the books sufficiently long to contribute to the favorable mortality experience in later life, it would seem upon theoretical grounds that the net annual extras should be higher than those indicated in Table O. This consideration is intensified when the higher rate of withdrawals prevailing amongst females as compared with that of male assured lives is remembered.

Change of Practice Recommended.

The paper closes with "The Current Life Office Practice" in Great Britain as to the acceptance of lives of women as to the extra premiums, if any. The author remarks: "The tendency of changing the office practice in the course of the last twenty years has been in the direction of reducing and dispensing with the extra premium on female life." He discusses this subject briefly and expresses

the view "that the most suitable way of meeting the extra mortality in my opinion is by placing a heavy initial and rapidly diminishing debt (i.e. lien) on the policy." For this he asserts the following benefits and advantages:

It may be remarked, however, that such a system, if adopted both for whole life and endowment assurances, would eliminate the chief weight of adverse selection, and the offices might find it to their advantage to disperse with medical examination in the case of females. The opinion has been expressed in paragraph 46 that the medical examination is less effective in the selection of women than in the case of men, and the medical examination is itself, in many instances, the reason given by women, otherwise favorable to assurance, for refusing to assure their lives.

Reserves Lower Than For Policies On Lives of Men.

An interesting though very brief comparison is instituted between the reserves on whole life policies computed accurately according to the female select table and male select table and expressed in percentages of the latter. The proportion of the reserve on policies of male lives required in the case of female lives from 66.7 per cent. at the end of the first year on a policy issued at age 20 to the full reserve on a policy issued at age 55 and 20 years in force. On the average, the reserve required would not exceed 90 per cent. So far, however, they have not charged a smaller amount in valuing British companies for the reserves on policies, issued upon the lives of women, than upon policies, issued upon the lives of men.

Contrasts With American Experience.

It is interesting to observe that, so far as the experience of American companies on the lives of women has been investigated, there are many indications that the conditions found in Great Britain and repeatedly confirmed by investigation are not duplicated in this country. Of course, the mortality curve in this country, as in Great Britain, varies upward from about age 20 to age 45, as compared with the curve which would be expected were the lives those of men, and were the mortality as favorable below age 20 and above age 45; but in two investigations which embraced the largest number of insured female lives ever investigated in the United States, viz: the experience of the Ladies of the Maccabees of the World and the experience of the Catholic Women's Benevolent Legion, the mortality was found to run at virtually all ages, lighter than the mortality among men, although the upward

tendency of the curve at the ages mentioned was, of course, present.

How much of the peculiar conditions found in Great Britain may be due to the increasingly small proportion of the total insurances taken out by women, thus producing an adverse self-selection, a disproportion of those who are conscious that they are in bad health applying for insurance, cannot be determined without closer comparison and investigation; but doubtless it is one of the important factors. Possibly the relatively freer position of women in the United States, if such is the case, may also be an explanation. The fact, likewise, that in fraternal societies persons who are conscious of being particularly healthy, are sometimes attracted by the very low rates, current for a time, may explain the difference in part.

The same condition, however, relative to the duration of the effects of fresh medical selection is found, as in Great Britain, viz: that they are traceable beyond the third or fourth year of insurance; and that they are also less marked than in the case of male lives.

Is The Difference Due To Business Causes..

It is a remarkable coincidence that, precisely as the heavy mortality experience of British companies in non-participating life insurance, as compared with participating has not been duplicated in the United States, the conditions being very different, the relatively heavy mortality experience of British companies upon the lives of women has also not been duplicated in this country.

The former has repeatedly been ascribed to the fact that non-participating policies have been taken in Great Britain chiefly in settlement of estates and other purely commercial matters where enlightened selfishness is actively at work, while in the United States they are taken by persons of the same general class as those who prefer participating policies.

In the same way it is altogether probable that a portion, at least, of the higher mortality among insured women in Great Britain is due, likewise, to the fact that many of the insurances on their lives are taken for purely commercial purposes in connection with the settlements of estates, etc., whereas in the United States most of the policies upon the lives of women are taken by themselves, they paying the premiums, and for precisely the same purposes as actuate men in applying for policies of insurance on their own lives.

THE "COLLEGE PROFESSOR'S POLICY."

The Metropolitan Life, with its usual alertness, is first in the field with a policy as cheap as it is possible to make it and yet in every way meet the demands of that class, namely, the college professors. While the contract itself is not a new one, the call for such a policy is. President Hegeman outlines its purposes as follows:

In the third annual report of the Carnegie Foundation for the Advancement of Teaching, President Pritchett mentions the fact that pathetic cases have arisen in which professors have died, after a service of twenty years, leaving widows in destitute circumstances, who under the rules of the foundation have no claim to a pension.

President Pritchett further suggests that teachers who have in anticipation the benefits of the pension system might well secure additional straight life insurance for the interval at lower rates than ordinary life policies, and that, once the right to a retiring allowance having been earned, the insurance could be dropped if its longer maintenance is a burden.

To meet this situation, we have prepared a new policy which we are calling the "College Professor's Policy," which will give term insurance to age 65, at which age the retiring allowance of the foundation begins. We have endeavored to eliminate all unnecessary loading on this policy on the assumption that college professors would not require the solicitation of an agent, but would undertake to place their insurance directly with the home office of the company.

The demand for such a policy covers some fifteen thousand lives, and with such a field to solicit, with no commission expenses and the insurance expiring at age sixty-five, it is not surprising that a company so economically managed as is the Metropolitan can issue term insurance with a period commencing at forty-five years, graduating down to a ten-year period, at the following low rates of premiums:

Age.	Annual Premium.	Age.	Annual Premium.
20.....	\$11.33	38.....	\$15.79
21.....	11.49	39.....	16.19
22.....	11.66	40.....	16.60

A CREDITABLE STATEMENT.

The 31st annual statement of the Fidelity Mutual Life Insurance Company, of Philadelphia, gives unquestionable evidence that the year 1909 was one of the most prosperous that the company has yet had.

The fact that the dividends to policyholders have been largely increased should be of invaluable assistance to the agency force in the procurement of new business.

The ledger assets were increased 13.64 per cent.; the reserve, 13.77 per cent.; the premium income, 3.68 per cent; interest and rental income, 12.72 per cent.

Since the organization of this company almost \$21,000,000 have been paid to policyholders, and as will be shown by the statement which appears elsewhere in this issue, the Fidelity Mutual has on hand total assets of \$19,502,070; net surplus of \$1,000,183 and dividends payable to policyholders, which it has charged as a liability, of \$761,246.

The Missouri Association of Local Fire Insurance Agents, which secured the passage of a State rating bill at the last session of the Legislature, only to have it vetoed by the Governor in consideration of a general reduction in rates, announces its intention to renew its efforts for a rating bill which shall also legalize local boards.

HAVE YOU MET HIM?

When you meet a "high official,"
Say the president or vice,
Of an insurance company,
One who "cuts a lot of ice!"
And he greets you in a rough
Ill-mannered way, and gruff,
Do not despair, but pity him
For his manner's all a bluff—
(He's skeered; that's all!)

Yes, sir, skeered as he can be!
Of everyone, no doubt,
A-skeered of even you and me,
Lest we should find him out.
For, despite his fume and fuss,
And pretentious, that there cuss,
Beneath his shell of dignity
Is human just like us!
(But—he's skeered!)

He's skeered to show he's human,
Poor soul! Ain't it too bad?
No man, nor child, nor woman
Knows when he's glad or sad!
He never does unbend
Lest he be asked to "lend";
Shut out from love and sympathy
He never has a friend!
(Cause he's skeered!)

—Chicago Journal.

Manager C. E. Shallcross of the Royal Insurance Company expects to sail for Egypt on February 19. Mrs. Shallcross will accompany him.

The Fidelity Mutual Life Insurance Company of Philadelphia

Annual Report of President, giving full details of income, disbursements, investments and information bearing on the present life insurance situation, sent on application.

GRAND JURORS "FEEL INDIGNANT."

As has oft been the result before when prominent local names have been involved, even though the air shrieked with prosecutions, the People's Mutual Life Association scandal has simmered down to two perjury indictments by the findings of the Onondaga County Grand Jury.

The indictments charge Iram C. Reed and W. H. Peck, president and secretary, respectively, of the association, with perjuring themselves in testimony they gave regarding the liability of the insurance company on the contracts they made with the association six years ago. On January 6 they swore these contracts were binding on the association, and it is charged they knew the contracts were not binding on it, and were not a legal claim.

The feelings of the grand jury were evidently sad and mournful, for they report "we feel indignant at the state of affairs our investigation has disclosed, but find at the present time no evidence of criminal acts which would legally justify the finding of other indictments. There were no larcenies because the evidence seems to us clear that it was not the money of the People's Mutual that was distributed."

In direct contradiction of the above with reference to the moneys which Lieutenant Governor White distributed the New York Insurance Department previously said, "the transaction narrows itself into a small compass of a sale by the People's Mutual of its own securities, that the avails of such securities might be distributed among the officers of the People's Mutual in consideration of their resignations."

FIVE YEARS OF HARD WORK.

The 24th annual statement of the Northwestern National Life Insurance Company, of Minneapolis, Minn., is the best argument that the company now has at its head the right men in the right place. Ever since President Thompson and Vice-President Graham took hold the progress of the company has been steady and uninterrupted. The dividends payable to policyholders this year are more than double those of the year previous, besides, in the year 1909 nearly \$1,000,000 was paid out for death claims and maturing endowments.

As will be shown by the statement which is printed in this issue, the company now has total assets of \$5,943,205, a surplus over all liabilities of \$253,294. The present management in five years has increased the ledger assets \$2,729,517. Their record is indeed gratifying.

COLUMBIAN NATIONAL WINS OUT.

The Supreme Court of Wisconsin, the highest court in that State, has decided the case of Wisconsin vs. the Columbian National Life Insurance Company, of Boston, Mass., in favor of the company. This case was brought against the company to recover penalties because of its refusal to file its annual report after retirement from the State, following the enactment of drastic laws in 1907. The action was in the nature of a test suit and the Columbian National was supported in its defense of the case by the Association of Life Insurance Presidents and the Manhattan Life Insurance Company, of New York, the Massachusetts Mutual, of Springfield, Mass., and the Union Mutual, of Portland, Me. The State asked for damages to the tune of \$1,000 a day from March 1, 1908.

PHOENIX MUTUAL LIFE.

Among the companies which deservedly command the respect and favor of the insuring public, by reason of the high ideal governing their management, and the soundness of the indemnity which they furnish, the Phoenix Mutual Life Insurance Company, of Hartford, Conn., holds an enviable position. Each succeeding annual statement of this sterling institution summarizes a record of substantial progress, attained by unexceptionable methods. The fifty-ninth annual statement of the Phoenix Mutual, as of January 1, 1910, which is presented in this issue fully bears out the well established excellencies of this company. During 1909 the receipts of the company aggregated \$5,803,593.24, and embodied an increase over the preceding year of \$330,996.69. Among the disbursements, the payments to policyholders aggregated \$2,832,363.31, and the excess of income over disbursements was \$1,953,469.71. The assets of the company, which were augmented last year by \$2,039,092.59, aggregated at date of statement \$27,987,468.81. The total liabilities and reserves ascertained, computed and accrued, were \$26,925,159.27, and exceeded at book values all actual, present and future liabilities by \$1,062,309.54. During 1909 the policies issued and paid for numbered 7,344, insuring \$16,465,028. The number of policies in force at date of statement was 63,431, insuring \$118,503,588. These figures embody an increase during last year of 3,661 policies for \$9,576,400.

The report of President Holcombe to the members of the company is in line with his former utterances in respect to clearness of statement and frank exposition of the sound principles which guide its management.

He sets forth that the company is purely mutual, and its sole purpose is to furnish sound insurance to the members at cost. He notes the importance of a well-constituted agency system in bringing the protection of life insurance to those who need it, and pays high tribute to the agent who is faithful to his company and the policyholders alike. He notes that at the close of last year there was no claim unpaid in which completed papers had been received, and that there was no suit pending against the company. The duty of investing the funds of a mutual company in a manner to insure both safety and the highest possible return is set forth as calling for the constant care of the officers of such a company. The methods, development and condition of the Phoenix Mutual Life exemplify the high standards advocated by President Holcombe, and cannot fail to command the approval of all who are fortunate enough to represent it and enjoy its protection.

DISABILITY BENEFITS INVADE SOUTH AFRICA.

"Insurance," published at Cape Town, South Africa, reports the adoption by the African Life Insurance Company of a policy which guarantees to limit the premiums falling due during total and permanent disability prior to attaining the age of 60.

Of this feature "Insurance" expresses the following opinion:

A total disability insurance clause has for some time past been no uncommon feature in other countries. Reforms and privileges now come so quickly and are so readily adopted that we might almost with safety predict the time will not be long before every life policy will provide some sort of total disability insurance without additional charge. Meanwhile the African Life is the first office to introduce in South Africa a privilege that, should it become universal, may help to avert some of the lapses which fall most heavily on the insured, inasmuch as they are involuntary on the part of those who, being totally incapacitated for work, are unable to continue the payment of premiums at an all-important crisis.

The new policy also is on what is known as the "Guaranteed Annual Bonus Plan" by means of which there is a permanent addition to the sum insured each year aggregating by the end of 20 years about 30 per cent. added to the policy.

The company has previously been issuing a deferred dividend policy which it now abandons. Concerning this the South African insurance newspaper from which the foregoing is taken expresses the following opinion:

The African Life have hitherto issued an "accumulation" or "deferred-bonus" contract and there is a good deal to be said in favor of that plan. It is however one that calls for very careful administration, and experience in America appears to have demonstrated that the piling up of surplus for future division is apt to develop weak points that can be avoided by an annual distribution. The furnishing of estimates with regard to probable results has also, when placed in unsafe hands, favored misrepresentation.

The Home Life Insurance Company of America has taken over the business of the United Mutual Life Insurance Company of Philadelphia. William L. Flood, former secretary of the United Mutual, has taken a general agency with the Home Life.

Thomas B. Love, who retired from the office of Commissioner of Banking and Insurance, of Texas, on February 1 has been elected second vice-president of the Southwestern Life Insurance Company of Dallas. He has also been made a director of the Dallas Trust and Savings Bank.

LAW IS ADEQUATE, IF ADMINISTERED.

Attorney General O'Malley has advised Superintendent of Insurance Hotchkiss that by chapter 66 of the laws of 1909, authority is given to a coroner, sheriff or deputy sheriff to summon a jury and investigate the origin of a fire whenever it is made to appear by the affidavit of a creditable witness that there is ground to believe that any building has been maliciously set on fire (or attempted to be), and the coroner, sheriff or deputy sheriff is requested in writing by the president, secretary or agent of any insurance company or by two or more reputable freeholders to investigate the truth of such belief.

DESIRABLE AGENCIES OPEN TO RELIABLE MEN

THE TENSION RELIEVED AT LAST.

On Tuesday last Henry Evans, president of the Continental Fire Insurance Company, issued the following statement:

The negotiations between the Western Union and the Continental management have been settled on a basis mutually satisfactory. The details will be announced later, but it is known that the Fidelity-Phenix will continue the membership in the Western Union of the Phenix, while the Continental and Fidelity Underwriters have applied for membership under conditions that will safeguard their agency plants and not enforce separation, this action tending to avoid rate wars and being for the benefit of all concerned.

This solves one of the most interesting and important situations Western underwriting has ever known. The transfer of the control of the Phenix of Brooklyn to Henry Evans, president of the Continental, opened up serious possibilities as a result of the graded commission rules of the Western Union. The Continental and the Fidelity being non-union companies under the plan of joint guarantee of the Fidelity Underwriters policy and a dual relationship by President Evans with the Continental and the Fidelity-Phenix, it was held that the latter could not remain a member of the Western Union unless the Continental and the Fidelity Underwriters should come in. Grave possibilities were involved in this, as the agency disturbances which would naturally follow would be demoralizing at best, and might easily develop into a widespread rate war.

Adverse Legislation Averted.

More responsibility has rested upon Henry Evans for the past two weeks than any other fire insurance executive has carried in many years. Aside from the above-mentioned ticklish situation, this is regarded as a very delicate time in Western fire circles. The activities of the Illinois commission, the call by the Illinois Superintendent of Insurance for results under four classifications, the investigation of the question of expense by the insurance commissioners, interviews with commissioners on this subject printed in the newspapers, the introduction of State rate regulation measures in Ohio and Kentucky, all impress one with the fact that the fire insurance companies are on trial before an unfriendly jury and that if the companies themselves do not find a way to cure some of the ills in the business unwelcome assistance is likely to be thrust upon them. If at this juncture some serious trouble had arisen in the Fidelity-Phenix matter the whole business of fire insurance would suffer, not only the temporary business

results, but the more serious and lasting ones of more laws, some of which would probably be ill-advised and burdensome.

With the Continental and Fidelity-Phenix union companies it will be possible for the companies which control most of the business to get closer together and institute reforms of their own, which will be to the benefit of the public as well as the companies and the tendency will be to hold off legislation and give the companies an opportunity to show what they can do.

Union Conferred With.

Before issuing his statement, President Evans went over the situation with Vice-President Kline, Western manager of the Continental and the Fidelity; J. H. Lenehan, Western manager of the Phenix and president of the Western Union, and with a sub-committee of the governing committee. The negotiations ended on a mutually satisfactory basis, the Continental and the Fidelity Underwriters applying for membership under conditions that will safeguard their agency plants and not enforce separation, this action tending to avoid rate wars and being for the benefit of all concerned.

Ample time is given the Continental to transfer its agencies from their present basis to the graded commission system. In view of the importance of the situation and the desirability of securing the accession of the largest of the non-union companies, it is to be presumed that the Continental received the maximum of concessions consistent with maintenance of the basic principles of the union.

It has been understood all along that a number of the leading non-union companies were ready to follow the Continental's lead in case it joined the union, and it is believed that they will receive practically the same conditions in case they apply. While no definite understandings have yet been reached, it is probable that a dozen of the leading non-union com-

panies will reach an understanding and will act together in whatever course is decided upon. If this is done, it will very materially simplify the situation, both for them and the Continental. If a dozen of the leading non-union companies join the union all their most important agencies will be cleared automatically without any disturbance.

The Man of the Hour.

The last issue of "Insurance Report," although printed before President Evans made his greatest demonstration, paid him the following tribute:

Henry Evans has ever been a name to conjure with. A frapped isolation that somehow stamped the man something different from the ordinary American fire underwriter seemed to encrust it. No man of his prominence in the business ever before gained eminence so little understood by the bulk of insurance men. Perhaps it may be said that he has been the most misunderstood; the man Evans typified a school of underwriting based in the popular mind on the principle of absolute and resolute independence of action and a sort of impersonal divorce from professional companionship with his fellows. To speak of the Continental at once conveyed the idea of a great, successful fire insurance corporation, cold-blooded and relentless; to speak of its president only strengthened an impression that made of Mr.

Evans a solitary, domineering figure in American fire underwriting. The favored few who enjoy personal acquaintanceship with this remarkable man, love him; yet, how few indeed there are among the millions to whom his name and fame are as household words who know anything whatsoever about the man? Insurance conventions have never looked upon the towering figure of Mr. Evans; legislative sessions or other public gatherings know him not. Like a Colossus he straddled the earth, a giant of strength and marvelous potency, a personality little known, yet strangely impressed in all its vigor on the business of fire insurance and upon those engaged in it.

With the crash in the affairs of the Phenix and the word that Henry Evans had taken charge came a quick revelation of the man. He stands forth to-day known of all men as genuinely human. What before was a vague conception of a mystic personality now blossoms into an intimate appreciation of the real man of flesh and bone. Not even in the smallest hamlet where fire insurance is practiced was it necessary for a local agent to inquire who this man Henry Evans is who seeks to right the affairs of the Phenix. To everyone the name Henry Evans carried a tangible, distinctive meaning—a positive conviction that a man of tremendous force, of great underwriting ability, one equally skilled in finance, had stepped into the breach and would surely and quickly see the Phenix through its troubles. Yet not one man in ten thousand can tell you a thing about Henry Evans. He has stood always at the front in the making of underwriting history, yet wholly apart from the whirl of publicity that brought other men high up in the business to greater notice. It is eloquent tribute to the force of character that his coming to the aid of the Phenix instantly quieted all anxieties regarding that company by inspiring a confidence in its future that could not have been created so effectively by any other underwriter in this country.

OHIO TO FOLLOW NEW YORK'S GOOD PRACTICES.

The report filed by the trustees of the defunct Ohio German Fire Insurance Company gives further evidence of the irregularity that prevailed in the former conduct of the business. The report of the trustees, which was filed in the Circuit Court last week, shows that instead of \$176,393 agents' balances there is in reality only \$60,191 due from this source.

As an outgrowth of the miserable failure of this company several bills have been introduced in the Ohio Legislature, which, if enacted, will eliminate to a considerable degree the possibility of future mismanagement of insurance companies. One bill in particular is a direct result of the concealment of the status of affairs that existed between the Ohio German and certain banks. It gives the superintendent authority to examine the books of banks or trust companies to

ascertain facts in connection with the examination of any insurance company, and provides penalties for the suppression of these facts. Another bill provides for the liquidation of insolvent companies by the Insurance Department, following the practice in New York, instead of through receivers or trustees, it being authorized to take possession of all companies shown by examination to be bordering upon bankruptcy.

One measure which will meet with approval generally is the bill which makes loss claimants of an insolvent company preferred claimants, instead of being on the same basis as return premium claimants and other creditors, as is the present law of Ohio.

POLITICS PREDOMINATE.

For years fire underwriters have pointed out the enormous fire waste in this country, and in all the larger cities they have fought for the adoption of improved building codes, only to be met with constant rebuttals, and the cry that they were working for their own interests only. Time and time again they have pointed out that, even though the cities had building codes, the laws were not enforced. It has been practically impossible to arouse the public's interest to the extent of forcing the politicians to pass such measures for their respective communities as to cut down the destruction of property and life.

The crying need for the reform which underwriters have so valiantly fought for surely cannot longer be charged to selfish motives for, according to the United States Geological Survey, the tax levied upon Americans by fire is \$1,500,000 a day; and the loss of lives, 1,449 a year. In addition to the waste and the deaths, it is estimated there were close to 6,000 injured as the result of fires in 1907.

If the buildings of this country were as nearly fireproof as those of Europe, it is estimated that the losses would be just one-fifth.

The report shows that cheaper fireproof materials may be used to advantage in construction, that three to six times the necessary amount of material is habitually used in structural work in the United States, that the building codes are laxly enforced, that the fire loss in the United States is eight times as much per capita as in any country in Europe, and that the great fire waste in the United States is due principally to the predominance of frame buildings and to defective construction and equipment.

The Geological Survey's inquiry is embodied in a report entitled, "The Fire Tax and Waste of Structural Materials in the United States," prepared by H. M. Wilson and J. L. Cochrane of the Survey. It covers not only the value of property destroyed, but also the cost of maintaining fire departments, the amount of insurance premiums paid less the amount returned, the cost of protective agencies, the additional cost of water supplies, and other elements of the fire loss. The report gives the method of gathering the statistics collected, makes an analysis of the fire loss in city and country, and on frame and brick buildings, and contains tables showing the increased cost of fire protection due to faulty construction.

Uncle Sam.

The United States Government owns buildings that cost more than

\$300,000,000, and is spending \$20,000,000 a year for new buildings. Not one cent of insurance against loss by fire is carried on these valuable buildings. Insurance at the ordinary rate would cost more than half a million dollars a year, and the Government avoids this great tax by constructing buildings that are securely fireproof.

To attain this degree of security from fire for Government buildings the Government has gone to considerable expense, and the results obtained fully repay the outlay. From these tests to determine the strength and fire resistance of building materials it has been determined that American builders can with safety use cheaper fireproof materials than they do. It has been learned that the difference in cost between fireproof and inflammable buildings is less than generally supposed, and the officials predict that this difference will soon become so small that it will cease to encourage the construction of flimsy buildings. It has been found that three to six times the necessary amount of material is habitually used by American builders in structural work. The necessity is also shown for better building codes in cities, and especially of a better enforcement of the codes already enacted, if the present enormous fire losses are to be diminished.

After a careful investigation it has been determined that the total cost of fires in the United States in 1907, excluding that of forest fires and the marine losses (in themselves extensive), but including excess cost of fire protection, due to bad construction and excess premiums over insurance paid, amounted to the enormous sum of \$456,485,000, a tax on the American people exceeding the total value of all the gold, silver, copper and petroleum produced in the United States in that year. The cost of building construction in 1907 in forty-nine leading cities of the United States, reporting a total population of less than 18,000,000, amounted to \$661,076,286, and the cost

of building construction for the entire country is conservatively estimated at \$1,000,000,000. Thus it will be seen that nearly one-half of the value of all the new buildings constructed within one year is destroyed by fire. In addition to this waste of wealth and natural resources, 1,449 persons were killed, and 5,654 were injured in fires in the United States in 1907, the year covered by the report.

NO ANTAGONISM INTENDED.

The first dinner of the recently organized Insurance Brokerage Association, of Chicago, was held at the Hotel LaSalle on Thursday last. Among the speakers were Vice-President Pellett and Manager Glidden, of the Chicago Board of Underwriters, and H. C. Eddy, president of the Underwriters Laboratory.

The presence of the officers of the board is taken as an indication that there is no antagonism intended by the organization of the association toward the board.

Charles E. Townsend, of Boston, general agent of the Equitable Life, recently gave an enjoyable dinner to his staff, in celebration of the successful results of last year.

AGENTS WANTED FOR UNOCCUPIED TERRITORY

N. A. L. F. I. A.

The executive committee of the National Association of Local Fire Insurance Agents has called the mid-year conference at Cincinnati next Thursday. Headquarters will be at Hotel Sinton. This conference is comprised of the officers and committeemen of the National Association, and the presidents and secretaries of the State Associations. A representative attendance of agents is expected.

The most important question pending is the matter of the trust lines and the loss of this business to local agents. During the past two years various proposals have been considered, and it is probable that at this meeting some definite steps will be taken in the matter.

Uniform Blanks.

It is understood that the sub-committee having charge of uniform blanks, comprised of E. H. A. Correa, Henry Evans and C. F. Hildreth, have reached an agreement which will be reported at this meeting.

The members are much interested in the attitude of the State Insurance Commissioners toward statutory fire insurance rating and expenses, and this matter will undoubtedly be "talked over" at the conference. The question of standards of qualification for agency appointment is another matter which will engage attention.

The "Co-operating List" of the National Association will also be taken up, with a view to considering whether any changes are necessary at this time. The matter of apportioning among the State associations the expenses of the National Association for the year 1910 will be decided, and also the time and place of the next annual meeting.

Asking Questions.

There are some interested people who are neither local agents, presidents of companies, nor managers of high salary perquisite, and the inquiry comes from them concerning the "local agencies," their location, etc., of the above named committee on "Uniform Blanks." Just an inquiry—not an invitation.

Insurance Commissioner Folk has notified the Lumber Underwriters of New York doing business in Tennessee to appear on or before February 15 and show cause why the company's State license should not be revoked for transferring a suit from a State to a Federal court without the consent of the complainant, this being a violation of the State laws. The suit was filed in chancery at Memphis.

CHICAGO FIRE BOARD MOVING.

It appears likely that a good proportion of the Chicago local fire insurance offices, now domiciled in the National Life building, 159 La Salle street, will go to the new Otis building, which is to replace the old Otis block at the Southwest corner of La Salle and Madison streets next year. There has been much dissatisfaction between the agents and the management of the National Life building about rents for some months, the agents claiming rents have been advanced too far.

According to one of the smaller insurance tenants in the National Life building there are two sides to that question, however. He has been in the building several years and says his rent rate has never been increased. He has been obliged to move his office two or three times, however, because larger agencies, which wanted more room, have offered the building higher rates than he was paying. He claims that most of the increase can be accounted for on this ground of the larger agencies bidding high for space which they wanted.

It is said that the Chicago Board of Underwriters has refused to renew its lease, which is a pretty good sign the fire agents are going out, as the board would remain wherever they wanted it to.

ANOTHER WOLF.

Abraham J. Wolf, of New Orleans, has brought suit for \$261,503 for damages, and names as defendants eighteen fire insurance companies, J. J. Kennedy, W. S. Campbell and Dennis B. Hagerty, fire marshal, of the State of Louisiana, all of whom, he charges, entered into a conspiracy to injure, wrong and damage him.

Wolf was indicted by the Grand Jury in connection with the destruction by fire of the Central Glass Company, on August 30, 1908, and held under \$500 bond, charged with the crime of arson. When the case came to trial it was dismissed.

**The
UNION CENTRAL LIFE
of Cincinnati**

Has several good openings for first-class men. It is the Company of companies for the agent who will make an aggressive campaign for business, and who wants to win in competition.

The Union Central earns the highest rate of interest on its investments of all American companies.

**THE BEST COMPANY
For The Policyholder.**

Address

JESSE R. CLARK, President, or
ALLAN WATERS, Sup't of Agents.

Wolf says the charges preferred against him have tended to destroy and impair his credit and have damaged him most severely. He asks for \$50,000 for loss of credit, \$50,000 for the false and libelous charges made, \$150,000 for the damages to his feelings, wounded pride and outraged feelings, \$10,500 for what he was forced to pay attorneys in consequence of the defendant's acts against him, and \$1,036.20 for additional expenses attendant upon making his defense to the charges brought.

The NEW POLICIES of the Provident are unsurpassed for conciseness and simplicity of form and for adaptability and liberality in all essentials.

The Premium rates of the Provident are exceedingly low and are still further reduced by large annual dividends.

IN NEW ENGLAND

Massachusetts Bonding's Remarkable Showing.

A remarkable showing is embodied in the second annual statement of the Massachusetts Bonding & Insurance Company, as of December 31, 1909—remarkable not only because of the splendid financial condition that it reveals, but also because of the brief period within which that condition was attained. That alone tells a story of capable management and trustworthy service, appreciated by the public which may well command admiration, and is but the forerunner of still further achievements in store. When it is said that the figures of the statement are those computed by the Massachusetts Insurance Department, following its recent examination of the company, it will not be necessary to dwell upon the fact that they are "hard pan" in all that the term implies. The exhibit of admitted assets, most excellently invested, totals \$1,066,118.80, whereof \$206,827.68 figures as net surplus over the \$500,000 capital and all reserves and liabilities, while the surplus to policyholders stands at the substantial amount of \$706,827.68. The assets, despite the great initial organization expense, embody a gain of over \$316,000 in the two years between the date of organization and that of the statement under review. A large volume of business, secured at an uncommonly low expense ratio and carrying also a phenomenally low loss ratio, has served well in achieving this gain. President Falvey has amply earned the right to say of the institution he founded "It is a success!"

Boston Board Amends Lightning Clause.

At Tuesday's meeting of the Boston Board of Fire Underwriters the Lightning Clause, applied to rents, use and occupancy, etc., was amended to read as follows:

This policy covers also direct loss or damage by lightning (the term "lightning" being used in its common acceptance only), provided that if there be other insurance upon the interests assured this company shall be liable for only such proportion of the loss by lightning as the amount hereby insured bears to the total insurance, although other policies may not cover loss by lightning.

It was voted that any fireproof, sprinklered theatre, which is not run for more than six months in any one year, may be written at 20 per cent. off regular schedule rates.

The bare rate on the breweries'

schedule was reduced from 40 to 30 cents on buildings, and from 60 cents to 50 cents for contents.

Charles E. Guild, William H. Rogers and Edward F. Woods were designated for three months' service on the rating committee.

The board is on the alert for a number of the vicious perennials that have appeared on Beacon Hill, and its representatives will be on hand at the hearings in regard to them.

Willard C. Hill Joins the Lord Agency.

Willard C. Hill, of Boston, New England special agent for the London Assurance, has resigned that post as of March 1, prox., on which date he will become a member of the Boston insurance agency firm of Elmer A. Lord & Company. This is the second field man of the London Assurance to go with the Lord agency, Horace H. Soule being the first, and in this case, as before, it is to be congratulated on the acquisition of one who is both a lovable gentleman and a most competent underwriter.

A Diagnosis

from February "Whittlings," published by the New Hampshire Fire Insurance Company: "The year 1909 has been a memorable one and will take a prominent place in fire insurance history. With two States already running its machinery with night permits, manufacturing rates at so much per, and others investigating with the possibility of the investigations extending in other and perhaps less desirable directions, the fire insurance situation to-day is acute and the diagnosis may call for an operation. As most of the inimical legislation springs from misunderstood conditions, agents can accomplish much toward dispelling alarm by an intelligent explanation."

Ocean Accident in Massachusetts.

The Ocean Accident & Guarantee Corporation, of London, which some time ago qualified for the transaction of liability, accident and health business in Massachusetts under a statute enacted last year, last Thursday announced that it had selected William A. Hamilton & Co., of Boston, as its general agents for the State in these branches. The firm consists of William A. Hamilton, who succeeded the late George W. Gregerson two years ago, and Clifford P. Nutting and George E. Glover, both formerly identified with the Boston office of the Travelers. The credit branch of the Ocean Guarantee in Massachusetts remains, as heretofore, under the management of H. P. Stanwood, of Boston.

A. B. Cilley, Manager.

A. B. Cilley, who has made a record as a capable casualty underwriter, first with the United States Casualty, and then as manager of the Norwich & London Accident's American branch until it was discontinued through absorption by the Norwich Union Fire, is again in the harness. The Equitable Accident, of Boston, which recently reorganized as a stock company, has been fortunate enough to secure the services of Mr. Cilley as manager of its new commercial department. There is always something doing when Cilley gets to work, and new and attractive features are announced by him which cannot fail to gain the favor of agents and the public alike.

New England Brevities.

Gustavus C. Holt, of John C. Paige & Co., Boston, with Mrs. Holt, has been spending the Mardi Gras season at New Orleans, proceeding thence to California for a three months' stay.

L. W. Cottrell, formerly identified with the field service of the National Fire, of Hartford, has been appointed special agent of the Hartford Fire for the New England territory formerly covered by H. M. Fenton.

GAIN, 93 PER CENT	

Absolute Security and Economy of Management

THE LONDON GUARANTEE'S STRONG POSITION.

To note the steady and sturdy progress of the London Guarantee and Accident compels the conviction that it is on about the strongest managerial foundation of any of the foreign casualty companies.

Its statement for January 1, 1910, on another page of "The Chronicle," speaks for itself, and is a splendid tribute to General Manager F. W. Lawson, who has displayed even greater ability in that capacity than in his former position as chief-of-staff to the lamented Captain Masters, his immediate predecessor.

Mr. Lawson directs "The Chronicle's" special attention to the following features in the statement:

The decrease in surplus is on account of the large amounts added to reserves, particularly in the credit department, where you will find that our reserves for outstanding claims and reinsurance were in excess of 100 per cent. of the year's writings. The unearned premium reserves of the burglary and boiler departments are large in comparison with the year's writings, but this is explained by the large proportion of business written on the three-year basis and as the company has been writing these lines for considerably less than two years, the reserves are larger than they would be normally. They will right themselves in the next two years.

ACCIDENT CLAIM ALLIANCE.

A meeting of the executive committee of the International Claim Association will be held next Wednesday at the office of the United States Casualty Company, 141 Broadway, New York, to arrange a program for the annual meeting, and dispose of other matters incident to the permanent organization of that association.

The Committee.

J. S. Eaton, chief adjuster of the T
J. S. Eaton, chief adjuster of the Travelers Insurance Company, president.

L. E. Brown, superintendent claim department, Continental Casualty Company, secretary.

Dr. W. L. Gahagan, medical director, U. S. Casualty Company, chairman.

Dr. W. L. Gahagan, medical director, U. S. Casualty Company, chairman.

P. B. Eyler, chief adjuster, Aetna Life Insurance Company.

F. J. Canty, general counsel, London Guarantee & Accident, Chicago.

Harry H. Vaux, manager personal accident claim department, General Accident.

Dr. C. M. Taylor, supreme surgeon, United Commercial Travelers.

This association practically supercedes the emasculate Alliance Against Frauds of recent incoignity.

HARDISON EXPLAINS

At a hearing last Tuesday before the Massachusetts Insurance Committee, Commissioner Hardison explained his bill to permit insurance companies to issue loans secured by mortgages on leasehold estates, and on no other mortgages. Counsel for the John Hancock favored the bill, while counsel for the Columbian National, while agreeing to its first provision considered that the second was unnecessary because of restrictions placed upon insurance company investments in 1905.

The Nahant (Mass.) fire department is to be equipped with an auto combination wagon for the protection of the Bass Point district. It will be a four-cylinder 40 horse power truck and will cost \$3,000.

ENLIGHTEN BROKERS.

At the recent annual meeting of the Real Estate Brokers' Association of the Dorchester district of Boston, President Wheelock and Secretary Cabot, of the Boston Board of Fire Underwriters, discussed the insurance situation in the suburbs and the proposed improvements in fireproofing and construction. The brokers certainly got their enlightenment from competent sources.

The Phoenix Mutual Life, of Hartford, has had plans drawn for an addition to its home office building, to cost about \$200,000. It will add about 50 per cent. to the present capacity of the home office, and is expected to be ready for occupancy by next November.

IS THE INSURANCE DEPARTMENT A COLLECTION AGENCY.

Chicago (Special.)—The practice of "using the club" on surety companies is getting exasperatingly common in the West. Public officials, unwilling or afraid to trust the courts of their own States, are quite inclined in some of the commonwealths to try to bulldoze companies into paying claims to the States, counties or cities they represent or to citizens of those political divisions whether they owe them or not. A few months ago the Illinois Surety's Kansas license was revoked because it refused to pay some claims to Kansas millers to whom a Buffalo flour broker failed to make an accounting. The company held it was in no sense liable, and the case was not taken into court. The National Surety held that the bond it executed in Arkansas for the Traders Insurance Company was to guarantee payment of fire losses on the State and it had trouble there for a time because of its refusal to pay claims for return premiums after the Traders failed. A few months ago the Fidelity & Deposit was ruled out of Michigan for a time because it failed to pay a judgment affirmed by the Michigan courts while it was enjoined from paying it by a court in Illinois.

Now the State Treasurer and Auditor General of Michigan have refused to approve bonds running to the State executed by the Title Guaranty & Surety, United States Fidelity & Guaranty, Bankers Surety and Federal Union Surety because they have not settled claims of the State on account of the failure of the Chelsea State Bank and its president, the shortage of former State Treasurer Glazier, its president. Glazier had secured his official bond at the beginning of his first term from the Fidelity & Deposit. Because it criticised his heavy deposits in his little bank, on which it had a depository bond, he refused to pay the renewal premium and got new bonds in four companies for the remaining year of his first term. The Fidelity & Deposit, or its agents, sued him for the renewal premium claiming the company could not get off the bond. At the beginning of his second term he secured his bond from the Title Guaranty & Surety. Before the end of his term his bank went down with a large amount of State money in it and his own business affairs were in a great tangle. The question of the liability of the various companies that had been on his official bond and of those on the bank's depository bonds presented some interesting legal points.

A few weeks ago the board of local improvements of Chicago started a hurrah about three companies against which it had claims and endeavored to get the other city departments to refuse to accept their bonds. A erimp was put in this procedure by a legal opinion that the departments had no right to refuse bonds executed by companies authorized to do business in the State because of failure to pay claims which the courts had not held that they owed. The United States Fidelity & Guaranty in this case was on some sort of a street contract bond and the contract was so changed by the city after it was entered into that the contractor refused to carry it out and the company refused to pay the city's claim. The National Surety and the American Bonding were on so-called paving maintenance bonds, which were so drawn that the sureties were liable only in case the pavings gave out otherwise than by natural wear and tear. This threw upon the city the burden of proving that their giving out was not due to wear and tear and it has never proved it in court yet. The case against the American Bonding was in court once, but the city was beaten without a full trial. The company desired to have the case settled, but the city has failed to institute suit and have the company's liability determined.

The ordinance recently enacted by Kansas City, fixing a license fee of \$100 for each insurance agency in the city is thought by some to be likely to prove a gun which was thought to be not loaded. The local agents advocated the measure, believing that it would drive the companies to an acceptance of the sole agency plan. There now seems to be some doubt engendered by reason of at least one company having indicated an intention of establishing a branch with a salaried manager.

THE MAGICIAN MAJESTIC—IF?

The microbe of promotion is peculiarly fatal in its sinister borings in insurance fields. For evidence look about. It is remarkable that some of whom it would be entirely consistent to hope for (and expect from) better things have been badly bitten by the busy bug.

In the issue of December 9 of "The Chronicle" there was a news item from St. Louis, headed "Curious Concerning Coudrey," which said, in part:

There is a deal of speculation going on here concerning the "off again, on again, gone again" movements of Congressman Harry M. Coudrey in connection with his long since proposed organizing of two insurance companies, each to have a capital of one million and an equal surplus, to write fire and life, and of each of which he was president, de jure and de facto.

Over in New York it was freely talked some weeks ago that Coudrey had fallen into the hands of the promoting Philistines and they had hypnotized him into selling out one of the largest and most valuable general agencies in St. Louis to follow them and—inferentially—divest himself of dollars that he might win a far greater weight of mundane glory.

Talk flowed freely over these doings and curiosity was quelled when it was announced that Mr. Coudrey had resigned the presidency of both companies—the Continental Life Assurance Company of America and the International Fire Insurance of America. * * *

Just how Coudrey, versatile as he is reported, can hold down his campstool in Washington to the pacification of a large constituency that must "see," and be "managing underwriter" of the—presumably—dead swell offices of a "promoted" fire insurance—two millions, capital and surplus—in St. Louis is disquieting to his circle, not to say apprehensive.

Except to preserve the unities and evolve a tale, it would be useless to pay note to the foregoing, but it has a strong bearing in the light of present developments. Almost before it became necessary to look in the Congressional Directory for his name and address there comes in from the Honorable Missourian, who is imperiling a cherished expression, a letter, the addressee of which is withheld:

The letter should eliminate any fears that may have been felt in insurance circles that the activities of one of the "big three" was to be lost to the cause.

The Letter.

Hon. Harry M. Coudrey, M. C.
President.
THE LINCOLN NATIONAL
HOLDING CORPORATION
OF AMERICA.
National Metropolitan Bank Bldg.,
Washington, D. C.

Mr. _____
Dear Sir:

Acknowledging and replying to your valued favor addressed to postoffice

box No. 1117, the Spectator, beg to enclose herewith prospectus of the Lincoln National Holding Corporation of America, which is self-explanatory, also some subscription blanks.

The corporation is the first and only large company of the kind ever organized in this country for this particular purpose, it will be prepared to write ninety-four different kinds of insurance, and there is no question but what its stock will pay handsome dividends.

This is an extraordinary opportunity; the size of the company, the character of the men behind it and the well-known enormous profits in the insurance business commends the stock to everyone.

The company will pay you a commission of two dollars and twenty-five cents per share on every cash sale and two dollars per share on each installment sale.

Please endeavor to sell some shares for us at once, using the enclosed blanks, you will notice that the shares can be sold for cash or payable in ten monthly installments; send in the subscriptions with checks payable to the order of the corporation and we will forward you a draft in payment of your commissions immediately.

If you desire more literature let us know and we will be pleased to send it to you. Later on if you are successful we will send you a list of people in your vicinity to call on.

Feeling that you will be successful and hoping to hear from you by return mail, I beg to remain, with my very kindest personal regards, dear sir,

Yours faithfully,

H. M. COUDREY,
President.

NEW YORK CITY

OSCAR ISING, General Manager.

thought that was going some. That proposed to do about everything insurancewise that the mind of man had conceived up to that time. It was great. Then he and his Richelieu had a slight misunderstanding—never explained but easily understandable—and Mr. Richelieu set up a separate motion which fairly swept everybody's breath away. The Honorable Mr. Armstrong—note that there are two "Honorables" in this tale—proposed to write about 27 varieties of insurance in one motion on two millions of capital. His insurance progenitor calmly straddled the ante and announced his Arizona cactus plant charter for fifty millions and 54 varieties of insurance, all in a regular Lloyds combination and a single sweep of the pen.

But Harry, that is, the Honorable Mr. Coudrey, member of Congress, president, etc. (see letterhead), unabashed by ambitious devotees, is out with a prospectus, embellished by his handsome phiz and "personally conducted" autobiography from the Directory of Congress, from which the following excerpts are made:

PROSPECTUS

of the

LINCOLN NATIONAL HOLDING CORPORATION OF AMERICA.

Proposed Capital and Surplus\$15,000,000

The Lincoln National Holding Corporation is formed in the belief that in the entire field of investment the highest degree of safety with the maximum returns is found in insurance.

The Board of Directors.

The Lincoln National will have on its board of directors capable financiers, prominent business men, and insurance men, selected from the stockholders, of world-wide reputation, whose names will add weight and solidity to a corporation which depends for its existence upon the confidence of its stockholders.

From the beginning the Lincoln National will be the strongest and the only company ever organized for this purpose. Its funds will be invested wholly in non-speculative securities of high grade, thus providing absolute safety and protection to the stockholders of the corporation.

Large Earnings of Insurance Companies.

That little publicity has been given to the large earnings of insurance companies, is perhaps due to the fact that insurance capital has been closely held in certain well known sections of the East, but has drawn large revenues annually in every section of the country. Naturally those few who are profiting thereby do not advertise the fact, which would encourage the establishment of other large companies. It appears, therefore, very significant that while at the close of years which were marked by heavy losses, and notwithstanding a panic which forced the sacrifice of securities in every other line there is no record of any offering of stock in the insurance companies having a large capitalization and a

substantial surplus; but, on the other hand, dividends to stockholders increased and large gains shown in the earning accounts of such companies.

Underwriting Profit.

The underwriting profit from the several companies owned and operated by the Lincoln National Holding Corporation covering all kinds of insurance will be exceptionally large owing to its plan of placing the stock with a large number of representative people, who will secure for the various companies, from the outset, a large volume of insurance business at a minimum cost.

Plan of Operation.

It is proposed first to organize four large stock fire insurance companies in the North, South, East and West. Second, it is proposed to organize a life company. Third, it is proposed to organize a casualty and surety company. Fourth, it is proposed to buy controlling interests in various other insurance companies. These companies will have an adequate capital and a large sized surplus.

The Lincoln National Holding Corporation, through its subsidiary companies, will handle ninety-four different kinds of insurance combinations which effect economy in the conduct of business, form one of the greatest developments of modern times and our corporation will apply this principle to the great field of insurance.

The idea of a clearing house for insurance, although well known in Europe, is more or less an innovation in America, yet, in European countries it has proven most profitable. The Lincoln National Holding Corporation will act as a holding company, owning outright each insurance company it organizes, or by controlling at least 51 per cent. or more of the proposed insurance company.

Effect of This Plan.

The success of an insurance company depends more upon the agency force than any other single factor, therefore, if you make money for the agent he will make the company, and we desire to distribute our stock among thousands of stockholders who will influence business to the companies owned by the Lincoln National Holding Corporation.

It can hardly be expected of insurance companies whose stock sells many times above par to endorse the plan of the Lincoln National, a strong

competitor whose stock in many instances is placed among their policyholders.

Proposed Capital and Surplus \$15,000,000.00.

The announcement of the large capital and surplus of the Lincoln National has brought applications for agencies and proffers of business from all over the United States. Every insurance agent, no matter where located, will be proud to represent the companies owned and controlled by the Lincoln National. Every share of our widely distributed stock will be a direct influence for business, and as a result of this wide distribution our companies will have an advantage never before possessed by any company heretofore organized. There is no promotion, watered or bonus stock in the stock of the Lincoln National Holding Corporation. Every stockholder pays or has paid for his stock exactly as you pay for yours. The shares will be sold for twenty-five dollars each, par value being five dollars, and the twenty dollars being surplus. These may be paid for, all cash, or three dollars per share with application, and two dollars per share per month until the full amount has been paid, when the stock will be issued.

Status of the Business To-day.

A century ago the state of insurance as a business might have been questioned, but it is an accepted fact that to-day it is paramount. If there is one thing more astounding than the progress made by these companies it is the complete ignorance of so many people concerning them.

NEW ENGLAND BUREAU OF UNITED INSPECTION.

The twenty-second annual meeting of the New England Bureau of United Inspection was held Friday afternoon at its headquarters in Boston with a large attendance of representatives of the companies in its membership, and with Assistant Manager Battilana, of the Pennsylvania Fire, as temporary chairman.

The annual report of Edward C. Brush, chairman of the governing committee, showed that 7,389 surveys and reports had been made during 1909, and over 8,488 defects found and corrections secured during the year. A classification of the latter showed that 801 occurred in construction, such as fire divisions, vertical openings, fire shutters, exposures, skylights, etc.; 694 in power, heating, lighting, volatile and lubricating oil hazards; 835 in administration and special features; 1,214 in electrical construction, such as inside and outside wiring, lamps, dynamos and motors, switchboards, rheostats, cutouts and fuses, and others; 3,028 in fire protection, hydrants, hose, thermostat systems, alarm service and the like, and 1,916 in sprinkler equipments, relating to supplies, pumps, tanks, piping, valves, heads and general work. These defects found and corrections secured showed an increase of 1,886 over the year 1908, and the number made since organization was 122,238. The number of tests of apparatus made last year was 4,170, under the rubrics of sprinklers, pumps, hydrants, hose and thermostats; a total of 60,542 since organization. The 1909 tests exceeded those of 1908 by 2,075. A total of 1,300 plans was drawn and issued last year.

The following officers were elected for 1910: Chairman, Edward C. Brush; vice-chairman, Walter Adlard; treasurer, Clifford H. Rice; clerk, secretary of the governing committee and manager, Edward A. Northey.

Executive committee — Chairman, Edward C. Brush; vice-chairman, Walter Adlard; A. K. Simpson, Clifford H. Rice, J. W. Grover, Charles Haas, Charles D. Palmer, W. H. Winkley, H. J. Ide, C. K. Brooks.

The governing committee elected for 1910 comprises these companies:

Aachen & Munich, Agricultural, American, New Jersey; Boston, Commercial Union, Connecticut Fire, Continental, Delaware, Equitable Fire & Marine, Fireman's Fund, Franklin, Germania, Granite State, Hamburg-Bremen, Hanover, Insurance Company of North America, London Assurance, Niagara, Pennsylvania Fire, Phoenix, Providence-Washington Spring Garden, Sun, Westchester and Western.

CAN'T MIX THE ELEMENTS.

That perennial subject, the Chicago burglary insurance situation, remains in statu quo, to use a diplomatic expression. Some of the managers appear to be in doubt whether the companies, except the American Bonding, should get together on the lines adopted in New York and let the American Bonding pursue its own sweet way, or whether some other course should be adopted. One or two managers who were opposed to any differential in favor of casualty offices as against fire offices, express themselves as in favor of an agreement among fire agents not to treat burglary insurance as exchange business. One or two offices which have been quite unyielding in their attitude, are said to be opposed to this. Should the situation shape up so that they were all that stood in the way of an agreement, it is possible they might be induced to give in on this point.

GENERAL ACCIDENT, OF SCOTLAND.

The General Accident has made notable gains since its "reformation" and placement of the United States branch under the sole management of Franklin J. Moore. The recovery from the ponderosity and speculative promotions of former management has been sharp and decisive to the degree of surprise. The General had a lucky escape from the gorgons and goblins of exploitation.

Manager Moore's United States results for 1909 shows more than two and a quarter millions of total assets and a free surplus of \$618,372 over all legal reserves, including a voluntary contingency fund of \$50,000. This is an increase of nearly half a million in assets over the preceding year. The General is doing fine.

"THE OCEAN."

Big and Wide.

The financial statement of the United States branch of the Ocean Accident & Guarantee Corporation as of January 1, 1910, on another page, indicates that 1909 was another year of notable success. In every department but one its premium writings increased during the year, the exception being the credit insurance department, and the reduction of income in this department was due entirely to conservative judgment in passing upon risks of this character until the return of normal conditions to the mercantile world. Commercial uncertainty had been anticipated in an underwriting way as is evident from the extra large reserves—exceeding the statutory requirements by over half a million dollars—voluntarily set aside a year ago to take care of contingent losses; and, although these losses came heavily upon the credit department, by reason of its foresight, it is able at this time to present a financial statement which shows unimpaired resources and a further bulwarking of its strong position.

The premium income for 1909 is very much larger than that of any previous year. A voluntary credit reserve of \$50,000 and a special contingent reserve of \$250,000 has been maintained for some years. Besides all this the surplus to policyholders has been increased.

A glance shows that the assets of the United States branch have been increased by about \$200,000, as compared with the previous year, shows its securities to consist of high-class Railroad, Municipal and Government Bonds, with a market value of \$3,259,909, as appraised by the Insurance Department of the State of New York, and other assets in the form of cash in banks, secured mortgages, etc., which bring its total assets close to the four million mark.

During the year just closed the Ocean added fidelity bonds and plate glass insurance; and by an extra deposit of \$100,000 qualified itself to write, in addition to credit insurance, several other lines in the State of Massachusetts.

The Ocean now has an aggregate capital on deposit in the various States of more than half a million dollars.

SEEKS JOY IN CHICKWEED.

We try hard to walk hand in hand with Charity, to cling firmly to the skirts of faith and to breathe in the sweet spirit of trust, but somehow we find ourselves stumped when a brother journalist claims to have found a diamond when, searching with a microscope, we can discover only piles of

pebbles—good pebbles, no doubt, for chicken consumption and concrete—with never a gem amongst them. A well-turned "expression of opinion" in "The Chronicle," Carey? Nonsense. As good as the other weeklies? Certainly. But as to discovering in it anything like fine literary expression and finish, you can sooner extract champagne from chickweed.—"Insurance Register."

Fine. Fresh blood enters with a new broom, just diplomated, and the world as an oyster. The cause of explosion is explained in another column of "The Register" concerning the familiar "F. B. V." articles which have heretofore been "The Register's" sole supply. It reads:

NOTICE.

Our readers and patrons will please note that F. B. Vogel is no longer connected with the "Register" as associate editor and business manager, nor is he authorized to represent it in any capacity, nor to collect money on its behalf.

This ancient navigator may now be expected to perform all the old familiar "knows-it-all" stunts and acquire wisdom by the usual method. "F. B. V." will be missed and it is hoped that his successor will abandon the foregoing style and learn the primer of insurance before attempting to write about it. Budding youth! What is more refreshing?

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

NEW YORK

SECOND ANNUAL STATEMENT OF THE

Massachusetts Bonding and Insurance Company

AS OF DECEMBER 31st, 1909

As computed by the Insurance Department of the State of Massachusetts, which has just completed an examination of the Company.

ASSETS.		LIABILITIES.	
	Market Value.		
Bonds of the State of Massachusetts.....	\$226,840.00	Capital	\$500,000.00
Bonds of the City of Boston.....	103,000.00	Premium Reserve	259,236.96
Bonds of Other Cities and Counties in Massachusetts	213,834.00	Reserve for Contingent Claims.....	41,195.18
Bonds of the City of New York.....	55,500.00	All Other Reserves	24,615.76
Bonds of Railroads and Other Bonds.....	229,750.00	All Other Liabilities	34,243.31
Cash	132,162.40	NET SURPLUS OVER CAPITAL (\$500,000.00), AND ALL RESERVES AND	
Accrued Interest	8,116.63	LIABILITIES	206,827.68
Premiums Due	96,915.86		
TOTAL ADMITTED ASSETS.....	\$1,066,118.89		\$1,066,118.89

Surplus to Policyholders, \$706,827.68

This company commenced business two years ago with total assets of	\$750,000.00
Its admitted assets, December 31st, 1909, were.....	1,066,118.89
Gain in assets in two years (despite the great initial organization expense)	316,118.89

Three Great Results Accomplished by This Company:

- 1—It secured a larger volume of business in its second year than was secured by any Company engaged in the same line in the third year of existence.
- 2—It conducted its business at a lower expense ratio to net premiums written than any other Company covering the same period.
- 3—It had a lower loss ratio to premiums written than any other Company.

Its Great Results in Massachusetts

After only two years of existence, this Company leads all others in volume of business in this State.	
Premiums written in Massachusetts	\$166,163.55
Nearest competitor	\$129,906.11

We thank our friends and the public in general for their loyal support.

OLDEST
IN AMERICA

The

STRONGEST
IN THE WORLD

Mutual Life Insurance Co.

OF NEW YORK

Record of 1909

The close of the 67th year shows an increased amount of insurance in force, \$1,441,323,-848, and an increased amount of new insurance paid for, \$102,040,633. Other notable features marking the progress of the Company are:

Assets	\$500,122,367.61	Increase.....	\$21,083,399.48
Policy Reserves	445,388,997.00	Increase.....	12,251,281.00
Profits on Stocks, Bonds and Real Estate Sold..	6,409,839.04	Increase.....	5,804,543.90

Unprecedented Benefits to Policyholders

Dividends paid in 1909.....	\$11,005,914.96	Increase.....	\$2,694,659.07
Dividends apportioned for 1910.....	12,401,752.11	Increase.....	1,309,469.73
Total paid policyholders, 1909.....	55,142,815.65	Increase.....	2,183,534.88
Held for Deferred Dividends and Contingencies..	91,506,436.91	Increase.....	5,661,445.71

The Company continues to maintain its PRE-EMINENCE IN ECONOMY OF MANAGEMENT. In connection with a largely increased volume of new insurance, the ratio of Expenses (exclusive of taxes) to Total Income is lower than any other company doing a general life insurance business has been able to show in many years. The relative expenses of The Mutual Life have decreased more than 50 per cent. in the last five years, resulting in a steady and satisfactory decrease in the cost of insurance.

Their Last Stamping Ground.

The day of the professional promoter is fast nearing its ignominious end. Not that the insurance company promoter has not made a success of it in the promotion—for he has by his rake-off—can be said to be the cause, but the rude awakening of the investor to the final realization that even if he had bought his stock at par it would be years before he could expect any returns, is doing more to drive the vandals out of the business than all other conditions combined.

Public's Education Nearly Completed.

As evidence that the costly education which the American people have received in the last three years is at last having its effect, is the abandonment of one section after another, until there remains but the Pacific slope yet to be pillaged. A further proof that this territory is all that is left for "a killing" is the fact that after their many shifts it has been selected by Messrs. Pratt & Grigsby and O. L. Van Laningham as the final seat of operation. No matter what it costs the people of the Coast, they are contributing only their just share, even though a little late, toward the general tuition fee charged by all professionals for their educational services.

Past Record No Hindrance.

It is not necessary to have before one the wild and misleading literature of a previous promotion, together with its failure to ever materialize, to recognize the absolute disappointment in store for the stockholders of the Western States Life Insurance Company, when such extravagant promoting management is permitted.

Over a signed statement, early this month, Pratt & Grigsby said:

The sale of the \$1,000,000 capital stock of this company has been placed in our hands. The stock is issued in shares of \$10 par value each

and we are selling it at two for one, or \$20 per share.

Our proposition is now beyond the preliminary stage, as we have made the most phenomenal record in this short time, in which we have started, having already disposed of nearly \$200,000 worth of stock, and having over 300 subscribers.

Their "Fine Line Up."

We have the best proposition here that we have ever been connected with, especially by reason of the fact that we have been able to secure as officers and directors of this company, men of a very high standing in the business-world throughout the entire State.

There is no question about this, for they are as follows: Arthur K. Briggs, president, State Board of Trade, San Francisco; G. Howard Thompson, land department, Bank of California, San Francisco; Guy Van Alstyne, vice-president, San Francisco; James J. Hight, assistant cashier, The Old Bank, Hanford; Otto Irving Wise, attorney at law, San Francisco; George W. Peltier, vice-president, California National Bank, Sacramento; Harvey D. Loveland, State Railroad Commissioner San Francisco; Rt. Rev. W. H. Morland, Bishop of Sacramento; Hon. Warren R. Porter, Lieutenant Governor, State of California, president Pajaro Valley Bank, Watsonville.

Like Finding Money.

Pratt & Grigsby are quite correct in their supposition that they will have no difficulty in disposing of the stock of the Western States Life, for, as they say "when you take into consideration the remarkably fine line-up" and especially the fact that they "are paying 22½ per cent. commission for the sale of this stock," there is not a single worthless, unconscientious life solicitor in the country who would not jump at the chance to get in on such gravy.

Briggs Helps 'Em to the Gravy.

To show the strength of their position and their utter disregard as to who will be the victims the promoters offer the following additional "easy picking":

By reason of our president, Mr. Briggs' wide acquaintance over the State, we will be able to furnish you with personal letters of introduction to the influential moneyed men in the community where you will go.

Really Pitiable.

Not satisfied with the use of his good name as a director the salesmen are furnished with a copy of a letter from the Rev. W. H. Morland, Episcopal Bishop of Sacramento. When the fine old gentleman's intentions are considered with the ultimate purposes to which the letter will be put, and the many hands into which it may fall, the letter is really pitiable. It reads:

Mr. Guy Van Alstyne, Vice-Pres.,
Western States Life Insurance
Company,
San Francisco.

Dear Sir:

I have given considerable thought to your request that I act as one of the Sacramento trustees of local investments of the Western States Life Insurance Company. I have finally decided to accept the trust with these clear understandings:

"First, that I am to regard myself a guardian and watchman of the interests of policyholders in making these investments, rather than a promoter of company interests; that I shall be free to express without reserve objection or disapproval of any matters which may seem to me to warrant such attitude; and

"Second, that in assuming this trust I do so as an individual and not in an official or corporate capacity, so that the latter is not to be magnified or brought into prominence in advertising the company."

I believe in life insurance properly conducted as a wise and sacred

(Continued on Page 3.)

THE INEVITABLE DENOUEMENT.

The Great Southern Agency Company, which was organized by parties previously known to fame in connection with the injection of capital into the Southern Mutual Life Insurance Company of Fayetteville, N. C., on terms more favorable to themselves than to the company, has caused the expected to happen once more by finding its way into the courts under litigation in which both sides are taking the aggressive.

Col. Frank P. Bond, of Nashville, has been so inconsiderate as to attempt recovering, on grounds which go all the way from misrepresentation to much worse, some \$22,000, which his clients had been induced to invest in the corporation; and in this he seems to be backed by other subscribers situated in Chattanooga itself. There are 1,800 shareholders, it is said; and it is expected that of these 1,799 will ultimately join in the demand for the return of their money, which will surely be in vain. This will leave C. J. Hebert on the other side, if indeed he was so incautious as to subscribe.

The "Retort Courteous."

The agency company is said to have \$160,000 real money in sight, however; so that it does appear to be worth while to get this much of it back if possible. If the subscribers succeed, it will have the effect of preventing the payment of \$100,000 to capitalize the Great Southern Life Insurance Company, which is about to be organized. One thing which Colonel Bond has secured is an injunction, restraining the directors and officers from carrying out this plan. This he did, as a "retort courteous," so to speak, to the attempt of the promoters to enjoin his clients from prosecuting their claims or in any way interfering.

Charges of wild misrepresentations, of fictitious and misleading statements of possible profits and the like are included in the cross bill. Up to the present time the court has granted both injunctions temporarily; and things are at a standstill.

Promoters Leave a Little.

One of the charges in the cross bill is that most of the money collected has gone to pay salaries and high commissions to agents and that of over \$400,000 collected, only \$160,000 is left. It is also charged that one corporation cannot, under the laws of Tennessee, own and control another corporation; and that the proposed organization of a life insurance company, to be owned and controlled by

the Great Southern Life Insurance Company, cannot lawfully be carried out. It is also alleged that the Great Southern Agency Company is a foreign corporation and has never been domesticated, so that it has no right to transact any business whatever in Tennessee.

REMARKABLE PROGRESS OF MICHIGAN STATE LIFE.

In other columns of this issue of "The Chronicle" appears the annual statement of the Michigan State Life Insurance Company, of Detroit, showing that during the year 1909 the company made a gain in assets of \$70,885.83; a gain in surplus of \$17,558.92; and a gain in insurance in force of \$1,397,253.64.

This is only the third annual statement of the company, which commenced business in 1907; and it is most unusual and highly creditable for a new company, while showing continuous growth in new business, in premium income and in assets, also to show a net gain in surplus so early in its career.

The total surplus of the company, for the protection of policyholders now stands at \$216,337.33, out of total assets of \$299,850.50.

All of this indicates that the new business of the company has been transacted and is being transacted at a moderate rate of expense for the results obtained. It is gratifying to know that 1910 has started off at even a better pace than 1909.

The mortality experience of this company has been remarkably favorable, due chiefly, no doubt, to very careful selection of risks. There were no death losses in 1907; in 1908 only 20 per cent. of the expected; and in 1909 only 12 per cent. of the expected.

At the annual meeting of the company, held on Feb. 9, there were some changes in the official staff, Arthur Jones being added as vice-president and counsel, and Dr. Victor C. Vaughan, dean of the medical department of the University of Michigan, being elected medical director.

President Apps, Vice-President Lyman and Actuary and Secretary Mead were re-elected.

The Michigan State has made a special feature of total disability benefits, charging therefor adequate rates and putting up adequate reserves. Its actuary and secretary, Franklin B. Mead, has become known as one of the best informed actuaries in the country upon this subject, his paper read at the last meeting of the American Life Convention having attracted the attention of actuaries throughout the world.

THE "GOATS" MAY ESCAPE PUNISHMENT.

The Supreme Court has allowed an amendment to the perjury indictment against Hiram C. Reed and William H. Peck, the "goats" in the Peoples Mutual scandal. The defendants' attorney charge that the Insurance Department did not have authority to examine Reed and Peck in the way the investigation was conducted, in that the law under which the department took action did not apply to fraternal societies.

Inasmuch as Lieutenant Governor White and the other manipulators were not technically guilty of a crime, no great howl should be made if Reed and Peck escape.

It is further contended by the attorneys that the indictments do not allege that the matter of the defendants through the society being liable on the contracts, constituted a material question at the examination. It is further stated that the indictments do not allege whether or not the defendants thought the contract was a liability of the association or whether they believe the contracts constitute a binding and legal claim. It has not been shown, according to the demurrers, that the defendants had knowledge that the contracts were not legal, binding, valuable or a liability of the society.

To make matters more interesting, the National Assembly of the Peoples Mutual, which met on Wednesday of this week, adopted a resolution calling for the immediate liquidation of the society by the Insurance Department. They also ousted the five directors proposed by the Tevis-White office-buying syndicate. It is evidently the opinion of the ruling faction that the only chance the members have of getting back the \$150,000 Horace White and his friends so cleverly separated the society from and distributed among themselves is through the action already instigated by Superintendent Hotchkiss.

(Continued from Page 1.)

trust, involving the welfare of widows and orphans, and it is with the idea of standing in some way as the representative of these I feel moved to accept your invitation to become a director.

Sincerely yours,
W. H. MORELAND,
Bishop of Sacramento.

Promoting the Promoters.

One of the amusing features of the promotion, in view of his supposed actuarial knowledge, is the publicity given to some choice selections from the pen of Frederic S. Withington. They read:

In reply to your request of recent date, I know of no men who have had more experience or who are better equipped for the work of life insurance company organization and management than Messrs. John R. Pratt and W. E. Grigsby.

I know personally that their methods are such as to deserve and inspire confidence. Stockholders of any life insurance company which has their services in an executive capacity can rely absolutely upon their judgment and experience in matters connected with organization as well as in the conduct of its affairs. * * *

I have full confidence in their desire to follow sound methods in actuarial matters and to base policy forms, rates and values strictly upon recognized standards.

\$650,000 For the Plotters; \$350,000 For Stockholders.

Assuming that Pratt & Grigsby get the usual promoters' allowance of 10 per cent. for all office expenses and their own fees over and above what is paid the agents, namely, 22½ per cent., and, as is the case, the stock sold at \$20, with \$10 par value, the stockholders will have given away \$650,000 to have procured a working capital of only \$350,000, for not a dollar of the capital can be used or held as anything but a liability.

Their Deception is Pathetic.

The officers and others lending their support to the promotion of the Western States Life, as has been the case in similarly organized companies, are not only deceiving their prospective stockholders as to the future value of the stock of the company, but themselves as well. Unintentionally or otherwise, they have dodged certain inconvertible facts.

If the present plans are carried to completion, there is the merest possibility that at the end of ten years the stockholders of this company can fairly expect dividends.

The National Convention of In-

surance Commissioners as its last annual meeting recommended the passage of State laws prohibiting the licensing of any corporation, the expense of organizing which **exceeded 5 per cent.** of the total sum paid by stockholders for their stock.

The average dividend paid stockholders by the American life insurance companies is estimated to be less than 7 per cent.

The few cases where an American life insurance company has earned a dividend before the end of three years, are held by all insurance experts to be most extraordinary.

The Western States Life Insurance Company begins business with two-thirds of its working capital gone—an absolute loss.

The dividends paid by the majority are the result of long years of up-building of the companies and the backing of them through years of loss.

The insurance conditions have so changed since the best dividend paying companies were organized that it is to-day impossible to have their sources of revenue.

Years ago the companies profited by lapses, non-payment of surrender values and through speculative investments, all of which are now prohibited by law.

The records of the most successful companies which promoters use to entice investors are not the records of companies whose stock was promoted.

The initial cost of getting business for a life insurance company is greater than in almost any other commercial activity.

CHARITY BY PROXY.

There is a story being told of a well known surety executive who is very prudent with his money. He rarely spends anything if he can get some one else to do the spending for him.

The other morning he was walking with a friend and they met a beggar who had a tale of woe that was amazing. He listened and asked some questions.

Then he turned to his friend and said: "John this man's story affects me greatly. Give him a quarter."

At the twenty-third annual banquet of the Life Underwriters Association of New York, to be held on February 24, at the Hotel Plaza, William H. Hotchkiss, Superintendent of Insurance of New York, will be the guest of honor. The entertainment committee promises that several speakers of national prominence will be in attendance.

STILL WEDDED TO HIS IDOLS.

Mr. Ekern Sees Nothing But Good In Wisconsin Laws.

The Mutual Benefit Life Insurance Company, of Newark, N. J., which under the construction of the new laws of Wisconsin, taking effect on January 1, 1908, by the attorneys consulted by it, withdrew from the State on December 31, 1907, has sent out correspondence with the department, entered into upon its invitation, during the year 1909 relative to the changes in the law, which will be necessary in order that the company will feel justified to return to the State.

"Expense Charge" on New Level Premium Basis.

At the last session of the Legislature the words "under the net level premium plan with uniform gross premium," it is called "loading," were stricken out of the definition of "Expense Charge" in the statute. This sentence, Vice-President Rhodes says, "was simply explanatory" and he is of the opinion that the "expense charge" under the law as it stands, is for a company which reserves on the net level premium basis, merely the loading over a net level premium, which would permit a commission of but 20 per cent. to be paid by his company on the premium of an ordinary life policy. He says also:

I am aware that a different construction has been placed upon the law; but the officers of this company cannot agree with such construction and do not believe that it would be sustained by the courts, and they do not, therefore, see their way clear to accept it.

Annual Dividend Requirements Decidedly Mixed.

Mr. Rhodes also objects to the requirement of the law that a life insurance company shall "annually ascertain and credit" the share of each participating policy in the profits which "shall be carried as a distinct and separate liability to such policy." This, according to his opinion, would require the same dividend to be actually credited and paid upon a policy with entire year's premium paid and upon another policy with only the first quarterly premium paid and no further payment of premiums thereafter.

Detailed Statements of Dividends Objectionable.

The company also objects strenuously to the requirement that statements of the detailed account, by means of which the dividend is computed, be sent to each policyholder, showing the percentage of mortality gain, etc. Concerning this Vice-President Rhodes says in part:

It is a common practice in com-

puting dividends, to use a portion of the mortality gains on new policies to help defray the expense of putting new policies upon the company's books. In fact, some companies do not distribute any mortality gains. Both practices are justified by sound business considerations, but such considerations cannot be made clear to an uninformed public, and the statement in question, instead of enlightening the policyholder, would tend to confuse and mislead him, and would be likely to produce unjustified litigation between a company and its policyholders.

Amendments Needed to Make the Law Fair.

The amendments which must be made to the Wisconsin laws before the vice-president of the Mutual Benefit would deem it wise for that company to return to the State, are as follows:

1. That the annual ascertainment of surplus be not compulsorily "as of the 31st day of December."

2. The entire provision, relative to crediting dividends and carrying them as a separate liability, should be repealed, as so irreconcilably confusing that it cannot be put into satisfactory form.

3. The requirement that the company mail each policyholder a statement of the details of the manner in which his dividend is computed, should be changed to "shall, if requested," in order that there may not be the inordinate expense of furnishing such statements to thousands of policyholders who do not desire them and who will misunderstand them.

4. The requirement that there be a disclosure of the "amount paid to sub-agents, the amount paid out in expenses of the agency, and the net compensation of the general agent" as to each general agent should also be repealed.

5. The provision relating to the limitation upon commissions and other costs of new business should be changed so that it applies to the aggregate only and not to each individual policy.

6. The term "expense charge" should be defined to mean the "maximum expense charge obtainable by employing any method of computing policy reserves established" in the valuation sections of the law. This would enable the maximum provision under the laws of Wisconsin to be availed of even though the reserve method did not correspond thereto.

Vice-President Rhodes' Closing Statement.

The letter of Vice-President Rhodes closes as follows:

My views regarding the necessary changes in the law might, of course, be modified if any changes were made at the recent session of the Legisla-

ture of which I am not aware, or by official rulings which are not in my possession. I cannot say whether the changes I have suggested, would be acceptable to other companies which have retired, as I have written this letter without conferring with them.

While I shall be very glad to engage in any discussion which has for its object the establishment of a better understanding between us, and would even be willing to visit Madison for that purpose, the company cannot make the same efforts to return to the State that we made to remain in the State when the present laws were under consideration. At that time our retirement was a serious blow. It meant the destruction of an agency force which had been years in building and which represented the investment by the company of a considerable sum of money. It meant, also, financial loss to our agents who had served us faithfully and whom we were anxious to protect. It also meant, possibly, a very heavy lapse rate with a consequent loss of business already secured. The situation now is very different. Our agency organization in Wisconsin is destroyed, and can be reestablished only at a heavy expense. Our lapse rate in Wisconsin has been even lower since our withdrawal from the State than it was before our withdrawal, implying, perhaps, that our policyholders, knowing they could not replace any lapsed insurance with new insurance in this company, have valued their policies more highly since the company's withdrawal than prior thereto, although our lapse rate in Wisconsin has always been low. We can truly say, therefore, that we are not as anxious to return to Wisconsin as we were to remain in the State, although we shall be very glad to return if the way is opened for us to do so.

After Many Delays.

This letter was sent on July 6, 1909, and its receipt was acknowledged on July 16, with a statement that "Commissioner Beedle is away on his vacation and the entire force is overworked."

No reply having been received, Vice-President Rhodes wrote again on October 8 to inquire what disposition was being made, and again on November 27. An examiner of the

Has several good openings for first-class men. It is the Company of companies for the agent who will make an aggressive campaign for business, and who wants to win in competition.

The Union Central earns the highest rate of interest on its investments of all American companies.

THE BEST COMPANY For The Policyholder.

Address

JESSE R. CLARK, President, or
ALLAN WATERS, Sup't of Agents.

department wrote on December 1, stating:

I am assured, however, by Commissioner Beedle and Deputy Commissioner Ekern that the suggestions which you have outlined in your first letter are being considered and that they will write you fully in regard to the matter next week.

A letter was sent by Deputy Commissioner Ekern on December 22, in which the success of the Northwestern Mutual Life Insurance Company, under the existing construction of the laws, which the attorneys of the Mutual Benefit have advised is erroneous and not to be relied upon, is cited as evidence that the Wisconsin laws are such that other companies could live under them. This may appear to be begging the question.

Commissioner Ekern on Net Level Premium Reserves.

Commissioner Ekern pays his respects to the net level premium method of valuation vigorously as follows:

Under the practice of life insurance companies as the business is conducted the reporting of this reserve on the net level premium plan for the first year and the next few years is the reporting of a fictitious reserve consisting wholly or in large part of the surplus taken from the older policyholders. It is admitted by all insurance men, as indeed argued by you, that this net level premium reserve can not be put up out of the first year's premium after providing for the current cost of insurance or the mortality charge and paying the expenses which the company incurs on account of the policy, and that this is equally true when applied to aggregates. Neither does any well managed company use such net level premium reserve in the first few years of the policy as a basis for loan or surrender values or paid up or extended insurance or other benefits. The real facts are that the company has no net level premium reserve and that such pretended reserve is made up from and conceals surplus of old policyholders. It forms an excuse for arguing that the expense cannot be met from the premium and consequently that the surplus must be dipped into for expenses to an unlimited extent. If it serves any purpose it is that of an arbitrary requirement for a surplus in excess of the real reserve, and so far as this may be desirable it can be met equally by a specific requirement for such surplus. This would disclose the real facts. But as our law imposes no limitation upon the amount of surplus a company may carry, companies from other States are, as before stated, permitted to report reserves on the net premium plan or any other plan which yields a higher reserve than that produced by the method used to determine the expense charge.

And of What Constitutes the "Expense Charge."

His construction of the "expense charge" is that the company may make it what it pleases, without regard to what it does concerning reserves, or in any other matter; and that, inferentially, if it has once elect-

ed that it be a certain amount, it is bound by that election. For this it would perhaps be difficult to find any warrant in the statute. The following is part of what he says upon this subject:

It appears as if a considerable amount of the difficulty in understanding our law has arisen from an inability to understand that the laws were intended to permit companies to prescribe their own method of doing business instead of the old system of net level premium values and the later arbitrary expense limitations being applied to all kinds of insurance and methods of doing business without regard to whether they fitted such plan or method or not. Of course if your company only wishes to adopt an expense charge for the first year of insurance, of \$5.27 on a \$1,000 policy at age 35, with a premium of \$26.35, on the American 3 per cent. table, that is a matter solely for your company, and if this is the expense charge adopted you will have to do business under that limit if you do business under our laws at all. But do not get away from the fact that there is no relationship between the expense charge and the amount of reserves which a company from another State is permitted to report to this State.

Is Impoundment of Surplus Thus Avoided?

Notwithstanding that he has thus divorced completely the "expense charge" from the method of valuation so that a company may put up out of the surplus of older policyholders or out of any other funds at its command the difference between a net level premium reserve and the amount

(Continued on page 10)

KEEPS UP ITS REMARKABLE PACE.

An examination of the sixty-seventh annual statement of the Mutual Life Insurance Co., of New York, which appears in this issue, shows that the company has this past year maintained the pace it set four years ago reducing its expense ratio, for otherwise it would not be in a position to set aside a general increase in dividends over those apportioned in 1909 of \$6,970,915.

The oldest life insurance company in America paid to its policyholders last year \$55,142,815. The increase in assets was \$21,083,399, and of the new business paid for in 1909 (\$102,040,633) the company claims its ratio of expense to total income is lower than any other company doing a general life insurance business.

THE RETURN TO THE FOLD.

Now fire insurance men in the West are asking each other what is going to happen next, and nobody can answer. When Henry Evans and George E. Kline, of the Continental, met the committee of the Western Union last week it took only a few minutes to arrange the details for the Continental's application for admission to the big organization. The chief concession granted the Continental was two years in which to get its agency plant in shape. Considering the size of its plant, this was very reasonable.

Union managers, of course, are happy over such an accession to their membership and non-union managers rejoice because peace in the field is assured by this move. The non-union managers are not committing themselves, as that would stir up their local agents. Some of these agents went through separation once and have no desire for another experience, hence they are sensitive on this question. This feeling is the greater because they believe that if they should find it necessary to unionize they would not be able to wring from union companies all the concessions they have been able to get out of some non-union ones. The impression is pretty strong that there will be concerted action among a half dozen or more non-union managers and that they will enter the union at one time. Should this occur it is altogether probable that there will be a **procession of smaller companies** into the organization, for there are small companies which stand for reasonable commissions just as strongly as the big ones do and they do not fancy the prospect of being thrown into excess commission agencies. As the union had practically abandoned control of rates and all other functions of doubtful legality in anti-compact States, it is now little more than an organization of companies which follow certain underwriting practices and have a fixed scale of commissions. Companies on the outside which follow the union commission scale would have to give up but little of their liberty by joining the organization and in return they would get into agencies where all are on the same footing as regards commissions. Furthermore, there is a strong sentiment even among some non-union managers to get together for the general good of the business, aside from the commission question. They see the States encroaching more and more upon what they have regarded as their rights. They see taxes increasing and the margin of underwriting profit growing perilously narrow and they see the

need of the companies presenting a united front. The union is the only organization in the West which affords a basis on which to get together; so it is probable that those who do not like the union or are prejudiced against it, but still desire co-operation, will see the wisdom of being practical and using the means of grace at hand rather than sighing for the unattainable.

Two Years' Concession Absolutely Necessary.

Had it not been for the two years' concession already referred to, within which to readjust agency conditions, there was certain to be a pretty how-d'y do. The situation in the field of the Western Union is that there are three classes of agents, as a result of the separation rule adopted by the union some years ago, when it put into effect graded commissions.

First. Exclusively union agencies, in which all the companies belong to the Western Union and commissions are limited to 15 per cent., except that 20 per cent. is paid upon certain classes of hazards and 25 per cent. on certain other classes of hazards.

Second. Exclusively non-union agencies, in which commissions are in all cases somewhat higher than in union agencies on one or more of the classes of hazards, excepting possibly where the Continental and the Fidelity have had "contingent commission" contracts under which no profit has been earned by the company, and consequently no contingent commissions have been paid. Not infrequently some of the companies in these agencies have been paying materially higher commissions than the others.

Third. Mixed agencies, in which there are both non-union and union companies, the latter paying not to exceed 15 per cent. in any case, and the former whatever they agree to pay. These agencies have been maintained, only when it seemed so much against the interests of the union companies and of the agent himself to force separation that there was a choice of evils and the continuation of the mixed agency was accepted as the least of two evils. In such offices the union companies have naturally been receiving a large proportion of the business which is not ranked as of the preferred class, while preferred business has been going principally to the companies, paying a discriminating commission.

Agency Interference Avoided.

Had it been necessary for the Continental to readjust its commission rates completely and to comply with union requirements, including separation, the following choices only would

have been open to itself and its agencies, viz:

First, for the company to retire from the agency and go over to a strictly union agency or a mixed agency.

Second, for the agency to become a union agency, which, of course, would have necessitated the dismissal of all the other non-union companies. In many cases, this would not have been practicable.

Third, for the Continental to remain in the agency, which would from that time forward have been a mixed agency. Under the strict rules of the union, had this taken place, the Continental could have paid 15 per cent. commission on all classes of hazards and the distribution of the business of these agencies would inevitably have stirred up a good deal of trouble.

Presumably all of these difficulties are very materially reduced by the concession of two years within which to readjust the agency arrangements. The change, therefore, is likely to take place with a minimum of interference with agency conditions in the West.

The meeting of the stockholders of the Insurance Company of North America has been called for April 7, to vote on the proposed increase of stock of the company from \$3,000,000 to \$4,000,000.

The Philadelphia Life Insurance Company

North American Building.
PHILADELPHIA, : PA.

THE TEXAS BOOMERANG.

Taking the stand that to issue rates for any number of cities except the whole State is to discriminate and will prevent comparison, the Texas Fire Rating Board has directed the fire insurance companies to rescind the key rates which they have issued for three cities.

The commission is evidently fearful that it will not have enough cases to sit on to warrant its existence. This latest move is to set aside any uneasiness that may have been felt in that direction.

It will be a long time before the companies can complete the basic ratings for the whole State. Already there is a growing dissatisfaction and uneasiness over the probable increase in rates. This will be augmented by the delayed announcement, and it is safe to predict that the dissatisfaction over the delay in hearing their cases promptly among the assured by the commission will be as great as the kick over the rates.

If all the key rates are given out simultaneously, it will be absolutely impossible for the rating board to hear the protests and dispose of them rapidly enough in time to benefit the protestants.

The embarrassment in which the commission has placed the fire companies will turn into a boomerang and cause the citizens to question whether or not the fire rating board can render any real service.

INADEQUATE PROTECTION AT BALTIMORE.

The recent heavy losses in Baltimore caused a special investigation of the city's fire protection to be made by engineers of the fire prevention committee of the National Board of Fire Underwriters. They recommend that nine additional engine companies, three ladder and three hose companies be added to the present equipment to warrant reasonable service. The cost of Baltimore's fire department per capita is estimated to be \$1.55, while that of Boston is \$2.35, and that of Buffalo is \$1.96.

MERGER GOES INTO EFFECT MARCH 1.

The merger of the Fidelity and Phenix will become effective after the close of business, i. e., after 2 P. M., February 28, 1910. The business of the Fidelity-Phenix Fire Insurance Company will begin March 1, 1910. The directors will pass resolutions validating the policies issued on policy forms of either company after the merger by agents prior to the receipt of new policy forms.

HARTFORD'S FIRE CUSTOMARY RECORD OF SUCCESS.

The Hartford Fire Insurance Company has entered its centennial year with its customary record of success and faithful performance of its mission. Total assets to the splendid amount of \$23,035,701 embody a gain of \$2,660,884 during last year; reserve for reinsurance, \$12,742,135, was augmented by \$719,661; net surplus, \$6,713,748, shows a growth of \$1,652,156 in 1909, and, together with the \$2,000,000 of capital stock, exhibits the magnificent surplus to policyholders of \$8,713,748. The administration of the Hartford Fire presents not only the spectacle of a producer of extraordinary results in its field of endeavor, but also that of an educator of its field force and of the public at large in the monstrous extent of the fire waste and the possibilities of its reductions, and is thoroughly well equipped for another century of success.

The Aetna Indemnity Company has appointed Otto R. Cisky, of Port Huron, Mich., agent of its accident and health department.

"THE RED PLAGUE."

At the annual meeting of the Illinois State Association of Local Fire Insurance Agents, held at Alton, Ill., yesterday, President Louis S. Amonson, of the Peoples National Fire Insurance Company, addressed the convention on the "Red Plague." This subject, naturally, is Mr. Amonson's hobby.

He said, in part:

Frequent reference is made to the great disparity in fire waste between America and other civilized countries, notably France and Germany, but I don't think that this has, as yet, been brought home forcibly enough to the heart and conscience of the American people. The company of which I have the honor of being president issued some time ago 500,000 blotters, and on each blotter we put this sentence: "Every fire is a crime," because every fire is due to one of three crimes—the crime of ignorance—the man don't know that certain conditions will burn his place; the crime of carelessness—the man don't care whether his place burns or not; the crime of dishonesty—the man wants to have his place burn and cash in at the expense of the American people. My friends, that is the problem of the red plague put in simple words.

Managers Not Free From Blame.

First of all I want to say that the responsibility rests with the executive officers of the fire insurance companies. When we hold an experience meeting and try to fix responsibility for the red plague, let us not forget ourselves. And I want to say to you that the managers of the companies are not free from blame for these conditions. They are often blinded by competition and in their greed for business and their desire to do everything that might advertise their companies, they pay losses whether they are straight or crooked. Some companies advertise that they pay losses on sight. They fairly shovel the money out to the man that burns up, and we must not forget that this is one of the causes for the wholesale destruction of life and property. We must not avoid our share of blame and so the fire insurance managers of the country, who pay losses without investigation, just as fast as they can shovel other people's money out—we must not forget that they share in that great and appalling waste of life and property.

Agents Tempt the Dishonest.

But there are others responsible with us, and next I will come to the local fire insurance agents. We have at this banquet to-night the flower of the Illinois fire insurance profession. Have you done all that you could to minimize this terrible national calamity? Have you done your full share to bring home to every customer that one great truth—that a fire is an absolute luxury; that it isn't at all necessary; that if a man takes every possible precaution a fire cannot occur outside of some great natural calamity that no man can foresee? Have you explained that every dollar that goes up in smoke makes Uncle Sam just so much poorer? Have you brought home to your people,

through your newspapers or your legislators that the great truth that a loss by fire is a permanent loss that can never be made good while the world stands? That in a million years you can never restore a single house that has been burned—the good muscle that went into the building of that house with the strokes of the hammer; the labor of the man who put the slate on the roof; the labor of the man who painted the wood; all is destroyed for time and eternity? Do you realize, also, that every time you issue a policy for more than the cash value of the property you put temptation before dishonest men, and that you are spreading the red plague of fire far and wide?

Puts It Up to the Agent.

Now, my friends, between the company managers, the company agents, the legislators, the newspapers and the insurance commissioners, we can bring to the American people a realization of the terrible waste and the needless waste of the nation's money. Not our money. It is the peoples money we are spending. Only one man in a hundred at the outside is ever the beneficiary of a fire. Ninety-nine per cent. of the people never have any occasion to collect a loss, and consequently if this subject is brought to their attention as you gentlemen can bring it to their attention it means that you will have ninety-nine per cent. of the population with you—ninety-nine per cent. of the honest citizenship of this country—in this great crusade that we ought to inaugurate to-night for the suppression of the red plague of fire.

To Hold Every Fire a Crime.

We ought to take one leaf from the book of experience across the water. There they do not, the minute a fire occurs, shovel the money out to the claimant. On the contrary, they say that no company can pay a loss until the police authorities have investigated it. That is a law that we want in the State of Illinois and in every State in the Union. A fire, like a murder, is, prima facie, a case for the police authorities. There should be an investigation of the cause, and after the man has proven himself innocent then, and not till then, should the companies have a right to adjust and pay. So I want to ask you to-night to join with me and to resolve that, as far as you are able, you will proclaim this gospel throughout this great State of Illinois, that every fire is a crime.

JOHNSON MADE WESTERN MANAGER.

It is announced that the Western department of the Insurance Company of North America will be removed from Erie, Pa., to Chicago, Ill., on May 1. J. F. Downing, who has represented the company in the Western field for nearly fifty years, is to retire. W. N. Johnson, for many years general agent of the company, will assume the reins as Western manager.

Mr. Johnson is a native of Illinois. He was special agent for the New York Underwriters in Illinois and Iowa for eight years and for the Hartford in Iowa for nine years before going with the Insurance Company of North America as general adjuster. For the last fifteen years he has been assistant general agent. He is a member of the governing committee of the Western Union and chairman of the committee on publicity and education.

When Chicago began to develop as the center of fire underwriting, it is said that the Erie headquarters was continued out of regard for Mr. Downing. He has been Western manager of the Insurance Company of North America since 1864. He will continue as general agent at Erie for the Pennsylvania Underwriters, which is made up of the Insurance Company of North America Fire Association.

OTHERS WILL FOLLOW LEAD OF CONTINENTAL.

That a number of strong non-union companies will soon follow the lead of the Continental, and join the Western Union, is only a question of time. It is understood that several of them have already been in conference with this point in view. As soon as an understanding can be reached, it is proposed that, to have thorough harmony, a committee be appointed to take up the negotiations.

When interviewed last week, President Amonson, of the Peoples National Fire, said:

The admission of the Continental and Fidelity-Phoenix to the Western Union offers an excellent reason why the Peoples National and other non-union companies should follow their example. So far as this company is concerned we are giving the matter careful consideration, and as soon as a conclusion is reached an announcement of our decision will be made.

ENJOIN COMMISSIONER FOLK.

The Lumber Underwriters, of New York, have filed a bill with the United States Circuit Court seeking to enjoin Insurance Commissioner Folk from revoking the license of the company to do business in Tennessee.

As announced last week, Commissioner Folk served notice on the company to appear by February 15 and show cause why its license should not be revoked, the charge being that the company had violated the insurance laws of Tennessee, by removing a suit from its State to the Federal court without the consent of the other parties to litigation.

The company contends this law violates the State and Federal Constitutions and relates only to suits brought by citizens of Tennessee. The suit was brought in Memphis on insurance on lumber in Mississippi. The case will be heard at Knoxville February 26.

Deferred Dividend Reserve...	148,581.00
Contingency Reserve (Surplus)	655,149.17

MEMORIAL FOR WHITNEY.

Frank H. Whitney, vice-president of the Michigan Fire and Marine Insurance Company of Detroit, died on Wednesday, a week ago. Mr. Whitney was prominent in organization work and last year was elected vice-president of the Western Union. He entered the services of the Michigan Fire and Marine in the late 80's as a special agent, and succeeded Eugene Harbeck as secretary of the company when the latter went to Chicago as Western manager of the Phoenix.

President Lenehan, of the Western Union, has appointed the following committee to prepare a memorial: Cory L. Andrews, Detroit Fire and Marine; H. C. Eddy, Commercial Union; J. W. G. Cofran, Hartford Fire; John Marshall, Jr., Fireman's Fund, and M. F. Driscoll, Phoenix of London.

The annual reunion of the field men of the Western department of the Phoenix of Hartford was held at Cincinnati on Tuesday and Wednesday of last week. President Skilton and Vice-President Mulligan represented the home office. The excellent showing of the company during the past year paved the way for complimentary remarks on all sides.

Indictments have been returned against T. T. O'Leary, J. J. Keane, P. J. Needham, Dr. J. C. Rogers and Dr. C. G. Schott, in the alleged graveyard swindle of the Indiana insurance companies. All of the accused, who are charged with criminal conspiracy to defraud, are out on bail.

As "The Chronicle" goes to press, the National Association of Fire Insurance Agents is holding its mid-year conference in Cincinnati. The loss of trust lines to local agents will be the principal subject of discussion.

NOTEWORTHY ADVANCE.

The

BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS, takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy incontestable, and no restrictions upon residence, travel and occupation, after the first policy year, except as to military or naval service in time of war.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

For further information apply to

STILL WEDDED TO HIS IDOLS.

(Continued from Page 5.)

which it has actually accumulated from past premiums after meeting all requirements as to expenses and losses, he is still of the opinion that by some hokus pokus the law as it stands, has the effect "to do away with the practice of using the surplus of old policyholders to pay for getting new business." The following is a part of what he has to say on this subject:

The effect of the requirement of our laws (Sec. 19500, laws of 1907, Ch. 057) that a participating company shall keep its aggregate first year expenses within the aggregate amounts it provides for that purpose in the first year premiums collected for the year, is to do away with the practice of using the surplus of old policyholders to pay for getting new business. It was this use of the surplus of old policyholders which led to the payment of commissions ranging up to 80 per cent. and 100 per cent., leaving the companies to pay the first year death losses and something more, as well as provide the so-called reserve, out of the surplus of old policyholders. Not only were the latter deprived of their dividends, but companies as a whole were losers on the enormous amount of policies which terminated at the end of the first year. Such a situation will be absolutely impossible under this section. Besides, if the amount which may be expended is limited to the amount collected for that purpose in the premium it is likely a pretty effective inducement to economy.

Believes Policyholders Wish the Itemized Statement.

He pays his respects to the proposition that most of the policyholders have no desire for an itemized statement as to the means of arriving at the dividend as follows:

The suggestion that the statement should only be made upon request is based upon the assumption, which is altogether too true, that it would rarely if ever be requested. The policyholder, engrossed with other affairs, pays altogether too little attention to the management of his company, so much so that if it happens to be a mutual company the existing management, with rare exceptions, finds no difficulty in perpetuating itself. If this information is put before the policyholder every year it is quite likely to be preserved by some and will be noted by a sufficient number to raise a vigorous protest against many practices which have heretofore been indulged in.

Query: Has any policyholder of the companies which are still doing business in Wisconsin, received such an itemized statement? The writer of this article has held policies in such companies for many years; no such statement has to his knowledge been sent to him, although large and satis-

factory dividends have been paid each year since this law went into effect.

Most of the remainder of the letter is given to a discussion as to whether the other points taken by the Mutual Benefit are well taken, a matter which can safely be left to the consideration of the counsel of the company.

The Company Invited To Send Other gestions for legislation."

The following is a peculiarly-worded invitation to a company to continue correspondence about the matter, and to submit further "suggestions for legislation."

We shall be pleased to consider any suggestions for legislation which will bring clearly home to the prospective policyholder the exact amount which his insurance is to cost him during each year on the assumptions of the company and which will place the policyholder in position to judge intelligently of the portion of such assumptions returned to him in dividends, if any. There is no mystery about life insurance and any attempt to invest it with that element is ordinarily a cover for fraud. Any suggestions that do not look to the ends above indicated will be time wasted. The argument for economy in expense in furnishing information to policyholders is ordinarily a cover for avoiding the disclosure of practices which enable the management to spend without question amounts compared to which the cost of informing the policyholder is a mere bagatelle.

Vice-President Rhodes Closes the Correspondence.

The following letter of Vice-President Rhodes in response thereto and closing the correspondence is so brief and to the point, as well as so thoroughly explanatory of what had occurred and of the existing conditions, that it is here given in full:

H. L. Ekern, Esq.,
Deputy Insurance Commissioner,
Madison, Wisconsin.

Dear Sir:

I have your letter of the 22nd instant, written in response to my letter of July 6, last to Mr. Edward A. Ketcham, an examiner of your department.

When Mr. Ketcham (of his own

volition so far as this company is concerned) called at this office and spent a part of two days discussing the insurance laws of your State and their effect upon the companies, it was natural, although as I now see a mistaken assumption on our part that you would be willing to consider such changes in the laws as, while fully protecting the interests of your citizens, would permit the companies which withdrew from your State to return.

The results of the insurance business of your State since the withdrawal of the companies may be as you suggest, satisfactory to the department, but one who has read the report of your investigating committee, as well as the reports of other investigating committees, would find difficult in believing that the companies now doing

Contingency Reserve (Surplus)	\$467,742.51

business in Wisconsin have a monopoly of virtue, or that many of the companies which withdrew are not to-day furnishing as desirable insurance in every respect as the companies which remained. Neither would anyone, I think, seriously contend that the companies doing business in Wisconsin to-day are in any essential respect, so far as the interests of their policyholders are concerned, conducting their business any differently than before the present laws were enacted. You say for example that, "The effect of the requirement of our laws (Sec. 19500, laws of 1907, chapter 657) that a participating company shall keep its aggregate first year expenses within the aggregate amounts it provides for that purpose in the first year premiums collected for the year, is to do away with the practice of using the surplus of old policyholders to pay for getting new business." No intelligent person would affirm that in this respect the practice of the companies doing business in Wisconsin on the net level premium reserve basis differs from that of the companies which withdrew. A lawyer who cared to undertake the business could, I think, become independently rich if he received a fee equal to 1 per cent. of the fines collectible under the laws as they now stand.

I would be glad to receive further light upon some of the statements contained in your letter. For example, I would like to know how, without disregarding the provisions of section 1946x, you conclude that in case of an ordinary life policy issued at age 35 for \$1,000 with an annual premium of \$26.35, the conditions of which require the company to hold a reserve according to the American Experience Table of Mortality and 3 per cent. interest, we are not limited to a maximum expense charge of \$5.27 for the first year of insurance.

Inasmuch, however, as you appear to be satisfied with the situation, or at least are unwilling to admit the need of any change of your laws, it seems useless to continue the correspondence and I can only express my regret that I was led to trouble you with my communication of July 6, last.

Yours very truly,
E. E. RHODES,
Vice-President.

TO PROHIBIT FIREWORKS.

Plans to make sure of a safe and sane Fourth of July are already under way in various parts of the country. The danger is, however, that they may all be forgotten before the evening of July 3. The New York Board of Aldermen are considering a measure which has been introduced, which proposes to prohibit the use of fireworks at any time except to persons who are duly licensed and for places designated by the fire commissioner. The measure has strong prospects of passage. It is being vigorously advocated by everybody except the small boy and his fool dad.

THE SECOND KNOCKOUT IS NOT ENOUGH.

Irrespective of the fact that for a second time the courts have held that the fire insurance companies were not operating in violation of the anti-trust laws of Kansas it is now said the publicity seeking Attorney General of that State will appeal the decision of Judge Dana.

The court held that the evidence introduced by the State to prove the alleged combination was insufficient, as the facts did not disclose any compact in violation of law. The gist of the charge had been that since the companies were all buying their advisory rates from the Eldridge Bureau there was naturally an illegal combination to maintain and enforce those rates.

The Illinois Insurance Department has asked the Peoples National Fire, of Philadelphia, to alter its charter. It contains a liberal provision for buying and selling real estate. The department holds that this clause must be so changed that the company will be prohibited from owning any real estate except such as is necessary in the conduct of its business.

The Merchants' Fire Insurance Corporation, of New York, has been authorized by Superintendent Hotchkiss to commence business. The company has capital of \$200,000 and a surplus of \$300,000. Newnan & MacBain have been appointed New York City agents. The board of directors is made up of several of the most prominent men in the city.

The Wonderful Fireman's Fund.

The wonderful recovery of the Fireman's Fund Insurance Company, following the earthquake and fire disaster of 1906 at San Francisco, is one that can hardly be paralleled. On January 1 last the company had assets of \$7,431,401, which is \$200,000 more than it possessed on the same date preceding the catastrophe of April, 1906. All the other items of its statement show a splendid accretion of financial strength and rapid progress. President Dutton, in a statement to stockholders, notes that A. K. Simpson, of Boston, manager of the Eastern department, with the co-operation of Assistant Manager Little, has made that department one of the company's most profitable fields during the past year, which cannot fail to be gratifying to these gentlemen as it is to their numerous friends.

John Hancock Mutual Life.

At the annual meeting of the members of the John Hancock Mutual Life, at its home office in Boston Monday, the directors presented a report showing most satisfactory results for the past year. During 1909 the outstanding insurance of the company was increased by nearly \$42,000,000, and \$8,400,000, in round numbers, was returned to policyholders during that period. On January 1 the total admitted assets stood at \$64,945,610, whereof \$6,159,153 figures as surplus over all liabilities. W. O. Blaney, H. W. Cumner and W. L. Crocker were elected directors for four years.

Peace in Sight.

At a meeting held last Friday in the board rooms of the Employers' Liability at Boston, representatives of all the companies transacting burglary insurance in Massachusetts were present, with the object of forming an organization, to be known as The Massachusetts Burglary Insurance Underwriters' Association. Committees were appointed to draft a constitution and by-laws and rules governing the conduct of the business. The meeting was entirely harmonious, and looked like the preliminary to a speedy cessation of hostilities in the burglary insurance field.

Aetna Life Insurance Company.

At a meeting of the directors of the Aetna Life Insurance Company, of Hartford, last week, most of the old officers, headed by President Morgan G. Bulkley and Vice-President J. L. English, were re-elected; but a new vice-president and treasurer was chosen in the person of Morgan B.

Brainard, while Morgan G. Bulkley, Jr., son of the president, was made assistant treasurer, and John V. Adams was elected assistant secretary of the liability department.

B. L. U. A.

The twenty-seventh annual dinner of the Boston Life Underwriters Association will take place at Young's Hotel, Friday evening, the 18th inst., with President Edward Marsh in the chair. Special guests will be present, namely, Fred A. Howland, vice-president National Life, who will speak on the topic "The Field Man's Opportunity"; A. F. Sheldon, president Sheldon School of Chicago, topic, "Man Building as Related to Business Building"; Charles A. Bradley, second vice-president National Association of Life Underwriters, subject, "Elements of Successful Life Insurance Salesmanship."

Arthur L. Berry.

After a long and painful illness Arthur L. Berry, special agent for New England of the New York Underwriters' Agency, died last Friday at his home, 12 Willard Street, Newton, Mass., aged fifty-one years. For some weeks past there had been scarcely any hope for the recovery of Mr. Berry, who will be missed from the councils of New England field men. A true and kindly man and a capable underwriter was Arthur Berry, and the efficiency with which he handled the bureau of the stock companies after the big Chelsea fire, will not soon be forgotten.

New England Brevities.

Good progress is being made before the legislative committee in regard to amending that portion of the Massachusetts insurance law which forbids bona fide agents, whether of life insurance or otherwise, from drawing commissions on policies issued to themselves.

The Franklin Fire, of Washington, D. C., capital \$200,000, has applied for admission to Massachusetts.

The New York Assembly Insurance Committee has reported favorably the bill of Assemblyman Bates, amending the insurance law by requiring insurance companies, within five days after notice of loss or damage by fire, to deliver to the insured proper duplicate blanks for making proofs of loss. Service of the proofs of loss may be made upon the insurer or his accredited agent or any person in or connected with the office of the agent. Failure to furnish such blanks is to be considered a waiver on the part of the insurer of his right to demand proof of loss.

WORTHY OF THEIR PROMOTION.

The annual election of the officers of the Empire State Surety Company was held on Wednesday. All the old officers were elected, and the recently vacated office of secretary was filled by the election of Gilbert Congdon. Alfred H. Hodson was elected a vice-president; and P. W. Koch was made assistant secretary.

The election of Mr. Congdon will not only meet with approval here, but throughout the company's entire agency force.

The election of Alfred J. Hodson as vice-president of the company is but a fitting tribute to his years of service in the home office of the company. The record he has made in the management of the Brooklyn office of the company is not only recognized by President Tomlins, but by the officers of other companies as well.

Secretary Congdon, as superintendent of agents for the Empire, not only measured up to President Tomlin's expectations, but won the admiration of the whole agency force. Prior to his coming with the Empire he was with the National Surety Company for about five years, occupying the position of assistant secretary and agency superintendent, and before that he had been for five years connected with the United States Fidelity & Guaranty Company, working up to the position of manager of the agency department.

ONLY A DESERTER IN NAME.

The Surety Association of America met Tuesday at the Waldorf-Astoria Hotel for the regular February conference. The Illinois Surety Company has resigned from the association. Its action is supposed to be due to the position of United States Circuit Court Judge Landis, of Standard Oil decision fame, in refusing to accept the bond of any surety company which is a member of the Surety Association of America. It is understood, however, that the Illinois Surety Company will continue to act in accord with the other surety companies.

Edward J. Bliven, formerly superintendent of agencies for Montgomery & Funkhouser, has been appointed special agent of the Jefferson Fire of Philadelphia, for Ohio, Michigan, Wisconsin and Minnesota, with headquarters in Chicago.

Col. Le Gage Pratt, formerly chief of the field forces of the Mutual Benefit, has taken a similar position with the Puritan Life of Providence.

WHERE HANDSOME PHIZES FAIL.

A pretty face and a comely figure, set off by fitting attire, have been known to effect an easy separation of a man and his money as well as his time. It is evident, though, that no matter what the personal attractions may be, the employment of two striking likenesses of such handsome men as Abraham Lincoln and Hon. Harry M. Cudrey, M. C. (and president) are not seductive enough to capture the men or the money. The Lincoln National Holding Corporation is now offering one dollar more per share commission for the sale of its stock than it did a week ago.

This should not be discouraging to the promoter though, the Honorable President M. C., for truly the Hon. Mr. Armstrong who despises as much as he personal mention and cheap notoriety, commenced operations with only his title and manly countenance and even for a'that had to practically turn the agents loose on the Treasury before he landed his company. And Harry has nothing on Bobbie in titles or good looks either. 'Tis sad, but sadder still for the poor stockholders who have to pay the freight.

"SCRAP" TO END, MAYBE.

Chicago burglary insurance men are likely to reach an agreement in the very near future and bring to an end the disorganization which has existed there for months. Of course, there are still possibilities of snags which may prevent so desirable a consummation, but these possibilities appear remote.

A meeting of managers and general agents was held on Thursday of last week, when the situation was gone into thoroughly and the general terms of an agreement were arranged. Committees were appointed to see representatives of certain offices not represented at the meeting. Another meeting will be called later.

Everybody Is Disgusted.

Everybody in the general agency business in Chicago is sick and tired of the useless and senseless "scrap" in which a few companies have been indulging, to the detriment of the business generally. This mental state puts the managers and general agents in an attitude more receptive for reasonable plans for getting together. At the Thursday meeting the New York agreement was taken as a basis and modified. The sentiment in Chicago is pretty generally opposed to the differential in favor of class 1 fire agents as against brokers. Most of the general agents see no occasion for putting a fire agent between themselves and the brokers by enabling him to pay the brokers more than the general agents themselves can. It was practically decided that commissions to class 1 agents and brokers shall be uniform, 25 per cent. for residence burglary and 20 per cent. for other kinds. This represents considerable concession upon the part of a number of general agents who are opposed to paying over 20 per cent. for residence business. Still, in the interests of peace, they will give up one-half or one-third of their overriding commission. This is a concession chiefly to a few branch office managers who claim that they can not interest brokers at 20 per cent. for residence business and therefore are prevented from building up business as rapidly as they should.

It is understood that the fire insurance agents that burglary insurance shall not be treated as exchange business for fire insurance. This is a concession to A. U. Quint, of the American Bonding. This probably goes against the grain of one or two offices which have shown an aversion to conceding anything to Mr. Quint, but seemed rather to expect him as the latest comer in

town to accept what plans the older agents might agree to.

One Chance for Peace.

The tentative agreement probably does not satisfy anybody entirely but represents concessions by all for the sake of peace. Apparently the only real danger that stands in the way of a pretty general getting together is that somebody may do something unwise while the situation is delicate and spoil it all. In coming down from a demand for a differential against fire agents to a willingness to accept an agreement that burglary insurance shall not be treated as exchange business, Mr. Quint has made perhaps the largest concession of anybody. It is intimated that one or two have shown a little tendency to crow about this. If that is true, it is the height of folly. While Mr. Quint is very anxious for an end of the riotous conditions which have existed, he has not assumed a supplication attitude and if any unwisely mistake his desire for co-operation for unconditional surrender they will be apprised of their error in time to their own regret. This is an excellent opportunity for a display of good sense and an absence of the irritating arbitrariness which has been seen on some former occasions. If all will show the same spirit of co-operation which the majority are showing there is no good reason why peace should not prevail in Chicago in the very near future.

The Provident Savings Life Assurance Society of New York announces the appointment of J. M. Macfarlane as manager for the State of Illinois, with headquarters at Chicago, vice Benjamin Bevan, resigned. Mr. Macfarlane was formerly with the Pacific Mutual Life at their Chicago agency.

The exchange has appointed S. Mason stamp clerk at Pawtucket, and admitted Special Agent G. W. Hart of the Niagara to membership.

NEW YORK

HOPKINS TAKES PRESIDENCY.

Former United States Senator Albert J. Hopkins has been elected president of the Illinois Surety Company, to succeed Fred M. Blount. Mr. Blount will remain on the board of directors. It is said that he has business interests in Colorado, and will make that State his home.

The Illinois Surety Company was organized by Senator Hopkins while he was still in the Senate. It is expected at the time that he intended to take the presidency. The position was offered to Mr. Blount upon his retirement from the banking business. The direct management of the company has been under his direction since its organization.

FRANKFORT'S 'FRISCO APPOINTMENT.

David Duncan, of San Francisco, has been appointed general agent of the Frankfort Fire, Marine, Accident & Plate Glass Insurance Company for the Pacific Coast.

Mr. Duncan's fifteen years' experience in casualty business and his general popularity should give the Frankfort its full share of the best of the Coast business. He will have charge of the efficient claim department which the company maintains at Frisco.

LUCE SUCCEEDS CRESSON.

E. T. Cresson, who has served as secretary of the Franklin Fire Insurance Company, of Philadelphia, for over twenty-one years, has resigned because of ill-health, and Edward P. Luce has been elected to succeed him. Mr. Luce has been connected with the Franklin since 1892, holding the position of special agent for New York State.

The Casualty Company of America will soon start writing automobile liability under a new and attractive policy form. It will not join the automobile conference, but will operate independently.

The Connecticut Mutual

Hartford, Conn.

Please mention this paper,

WILL ACCEPT PERSONAL SECURITY.

Insurance Commissioner Hawkins, of Texas, says that, inasmuch as the law does not specify that surety companies must furnish the bonds required of insurance companies of other States doing business there, that in some instances he will accept good personal security, but only that of persons residing in Texas.

SMITH ELECTED PRESIDENT.

Arthur L. J. Smith has been elected president of The Spectator Company. Mr. Smith first entered the service of the company at the age of seventeen. His many years of faithful service deserves all the recognition that The Spectator Company can give him. Colonel Thomson will remain as editor in chief, and W. S. Barnaby as assistant editor.

SEVENTEENTH ANNUAL STATEMENT

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.38
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of..... \$2,710,650
And increase of assets in the same time of..... 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,098; 1868, \$1,730,620; 1878, \$2,422,126; 1888, \$3,028,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

COMPARATIVE RESERVE TABLES

BY

MILES M. DAWSON

Consulting Actuary.

Containing Mean and Terminal Reserves for the
usual forms of policies and by the
following standards:

American Experience, Select and Ultimate $3\frac{1}{2}$ per cent.

No Publicity This Year.

National Government Unlikely to Publish Insurance Reports.

According to the latest press advices, which have long since been made known to readers of "The Chronicle" through the daily papers, there is every likelihood that the publicity provisions of Section 38 of the Act of Congress of August 5, 1909, imposing an excise tax on corporations, joint stock companies, associations and insurance companies, will not take effect this year for want of an appropriation. It transpires that not only was the appropriation already made for carrying the law into effect insufficient but that in addition it was not available to employ persons within the District of Columbia, as, for instance, to pay for services in preparing the documents for publication, filing them so as to be conveniently consulted, etc.

So much was conveyed to the president by Hon. Charles D. Norton, assistant and acting secretary of the Treasury; and by the President this communication was transmitted to Congress, with his recommendation that a special appropriation of \$50,000 be made.

Objections Not Made by Insurance Companies.

There has been so much objection to the publicity features, on the part of corporations other than insurance companies, that at the present writing it does not seem likely that Congress will make an appropriation this year. There are difficulties to be overcome in securing such an appropriation which, while not insuperable, offer so many obstacles that it is generally admitted that favorable action is not probable during the present session of Congress.

The insurance companies are so

accustomed to publicity in apparently every respect which would be called for under this act of Congress, that there were no protests against this feature of the law as applied to them.

The Taxes, Expenses and Trouble Objected To.

By its provisions they were subjected to an offensive tax, deemed by many of them to be burdensome, especially as it comes as an addition to already over-heavy taxation on the part of States and in some instances, counties and municipalities.

There was also objection to the expense and trouble which might be imposed upon the insurance companies by reason of the provision of the act that the Federal Government might send persons to make special examinations for the purpose of ascertaining whether the statement of assets and liabilities and of profits earned were correct.

But as to the publicity features, concerning which there was so much complaint on the part of other classes of corporations, not a murmur of dissent was elicited from those who were interested in the management of insurance companies.

Proposed Publicity Probably Ineffectual.

Yet as the law stands it really looks as if all that could possibly have been accomplished in the matter of publicity, relating to insurance and insurance companies, would have been to gather together in one gigantic report, or set of reports, published by the National Government, the same returns precisely as were rendered by the respective companies to the State authorities. Therefore, the publication might have been perilously close to a waste of money and a mere duplication of information already obtainable.

Certainly reports, such as these, would have done little to make the publicity feature of this law so effectual as a measure of virtual regulation as to signalize the first step toward replacing meddlesome supervision by meritorious and thoroughgoing publicity.

Thus in life insurance there would have been reports of companies, all holding "reserve funds" of the sort "required by law" in their respective domiciles, such reserves being in a few instances two or even three-year term, and, to take the other extreme, in some instances net level premium, possibly with the Walter C. Wright addition thereto. If such a report were given out without suitable explanations in foot notes, it might be wholly misleading as to the relative strength and reliability of companies; and, if given out with foot notes explaining the varying significance of the term "reserve fund," it would inevitably be regarded as invidious and offensive by some of the companies.

It is difficult to see, therefore, just what useful purpose would have been served by requiring all this publicity of such an incongruous and confusing character that comparisons could not well be instituted and if instituted, would more likely mislead than inform.

A similar situation, likewise, would be found in fire insurance where a new company might seem to be steadily losing money, when all that it is really doing is locking up additional funds in its reserves on account of a rapidly growing business, such reserves to the amount of fully 40 per cent. thereof, representing pure surplus, or what ought to be a special reserve fund against conflagrations.

(Continued on Next Page.)

Some Would Have Liked It, but Is It Fair?

Doubtless this want of uniformity and of true publicity would have been borne by many insurance companies with complacent resignation, and, in fact, would have been supported by them much better than true publicity, which would enable enlightening comparisons to be drawn. That, of course, is one of the reasons why the feature was not regarded objectionable.

But the act was drawn for the purpose of imposing a tax in an equitable and undiscriminating manner. The tax feature still remains, likewise, even though the publicity feature seems likely to fair for want of a new appropriation. The appropriation is large enough to enable the tax to be levied, and there will be no indisposition to attend to that part of it, either on the part of Congress or of the administration.

Inequitable Distribution of the Tax Burden.

As the law stands, especially in this matter of reserves, it must necessarily result in a very inequitable distribution of the burden of these taxes. The taxes are laid upon the earnings of the year, being "the yearly net income over and above \$5,000 received by it from all sources during the year, exclusive of amounts received by it as dividends upon the stock of other corporations, joint stock companies of associations or insurance companies, subject to the tax hereby imposed."

This net income is described, as to its source and as to the various deductions to be made from it, in identical language as applied to all classes of businesses, including insurance, excepting that as to insurance companies, there is the further deduction of "the net addition, if any, required by law to be made within the year to reserve funds."

Except as to companies domiciled in the State of New York, these words will mean "the amount added during the year to the reserves as computed by the standard employed by the company"; for the reason that elsewhere, excepting in Massachusetts, where the reserve is net level premium in all cases, the sort of reserve which the company is to carry is determined by the language of its policy contracts, upon which the reserve law of the State applies, quite as automatically as upon policies which are level premium by their terms.

How It Will Work Out.

In consequence there will be the following situation, viz.: that of, say, eight new life insurance companies, with the same premium income, the same expenses of all kinds and dif-

ferent reserve methods, the first carrying net level premium reserves; the second, select and ultimate reserves; the third, modified preliminary term; the fourth, reserves of the Ohio or Committee of Fifteen variation; the fifth, the Illinois modification; the sixth, the Michigan variety; the seventh, full preliminary term, and the eighth, two or three-year preliminary term. Of these it would be possible for the reserve method to make all which carried reserves lower than the Ohio or Committee of Fifteen plan, for instance, to show a loss, whereas all who carried reserves lower than by that standard would show a profit. The latter accordingly, would pay taxes upon their so-called net income, while the former would escape taxation.

Of the companies which were called upon to pay taxes, likewise, those which carried the lowest reserves, would pay the highest tax—always assuming that the premium income and expenses have been the same throughout the eight companies.

Not So True of Well-Established Companies.

There would not be so great a variety nor so great apparent inequity after a good many years have passed by and the business in each of the companies has become more stable; because in that case the comparison would be merely between the increases in reserves under the different plans and not between the entire reserves in the earlier years of the policies. In other words, the net income of a well-established net level premium company, after deducting its increase in reserves, is perhaps not much different from what would be its net income, after deducting the increase of reserves, were the latter computed by a method which did not have the effect of keeping a considerable part of the surplus locked up in so-called reserves. What takes place when the business is stable, is virtually to release a large part of this surplus and then immediately impound it again on account of the new policies of that year. After the company has reached a virtual equilibrium there will probably be very little difference in the profit and loss statement for the year, whether reserves are computed on the net level premium basis, or on some basis more nearly corresponding with the facts.

Does Apply to the Army of New Companies.

But there are many small and new companies throughout the country at the present time, and these conditions do apply to them and will continue to apply for a considerable period to come if the basis of the law is not

made more uniform and equitable in its application to all the companies. In other words, under the existing conditions there must inevitably be large over-payments of this tax by some and a total escape from it by others, the actual earnings of which are as large as those of the companies which pay the tax, but are concealed, instead of being set up by the companies themselves.

In recent issues of "The Chronicle" there has been favorable comment concerning the operations of several of the smaller companies, notably two, which, upon completing their third year, show net earnings for the year, one setting up reserves by the straight modified preliminary term plan and the other by the Michigan modification of that plan. Had the former held reserves on the same standard as the latter it would have shown a very considerable increase in apparent net earnings, and had the latter held reserves as stringent as the former it might have shown no net earnings whatever. Both of them would have shown enormously greater earnings, had their reserves been computed by the full preliminary term plan, and, of course, both would have shown no earnings at all, had their reserves been computed by the net level premium method.

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

THE PENN MUTUAL LIFE INSURANCE COMPANY OF PHILADELPHIA

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

Has This Unfairness Any Advantages?

It may be thought that this is a good feature in the incidence of the taxation because it serves to penalize the carrying of too weak reserves, as, for instance, by the two or three-year preliminary term plan, such companies being liable for taxation upon their apparent surplus, although most of it should be in the reserves. This might be a virtue, if there were an opportunity for companies to have policies which were written in a particular way, valued by any one of the eight methods mentioned; but such is not the law, except in New York, as stated. The valuation is in other States fixed by the terms of the policy, several of the States, however, requiring that a certain method shall be the minimum allowed, even by special policy provision. Therefore, the lesson is likely to be lost; since the company which finds itself being taxed upon an alleged surplus, although it ought really to strengthen its reserves, is not in position to adopt a stricter reserve standard for its existing business but can do so only as to new business.

The Lowest Standards Do Not Encourage Earnings.

Another difficulty about the matter, also, is what, while theoretically the companies with low reserves ought to show relatively large surplus earnings, such has, to the present time, failed to be the case except in rare instances. In other words, the invitation to extravagance has been too much for the powers of resistance of the managers of most of these companies; and, instead of the money thus released from reserves going into the surplus fund, it has only too frequently been wasted.

Precisely the Contrary Effect in Fire Insurance.

In fire insurance, the law has precisely the contrary effect, in that it distinctly favors new companies. It is the first thing in a good many years' legislation that has seemed to favor them, and it is to be regretted that the assistance is altogether too small to render their paths materially smoother. But since the burden of the statutory reserves naturally falls heavily upon a fire company during its earlier years, it is not likely that most of the newer companies will have a large amount to pay out in these taxes; while older companies, with heavy reserves and stable businesses, find the concealed profit locked up in their reserves, gradually working its way out into net income as defined by the statute. Such companies will, therefore, bear the heavier burden of the taxation.

Uniform Reports Not Urgently Sought For.

There is probably no very great demand by insurance companies in any quarter of the United States for a uniform system of reports which will actually reveal in deadly parallel both the achievements of the managements of the various companies and also their failures and partial successes. Yet, if there could ever be conditions under which the companies would welcome penetrating and significant publicity, it would be when, as in the present case, the powers of the National Government were limited to such publicity and the reforms, if any are needed, would necessarily be left to the natural disposition of all men to remedy evils when they become a public by-word, and, therefore, intolerable.

The worst objection to such publicity, unquestionably, would be that there are still some 50 States, each of them in the regulating and supervising business and quite ready, no doubt, to seize upon scraps of information, which might come through the Federal department's activities, as an excuse for more meddlesome and burdensome tyranny under the name of supervision. If there could be any real assurance that these matters would be permitted to work themselves out by means of publicity alone, it is not unlikely that a full measure of effective publicity, along lines so uniform that close and discriminating comparisons could be made, would be welcome by all the strongest and best men and institutions in all the branches of insurance.

An opinion by Mr. Holcombe, Attorney General of Connecticut, holds that dividends declared by mutual life insurance companies should be exempt from taxation.

ONE OF THE BEST.

The efficiency of the present management of the Union Central Life Insurance Company is best emphasized by an examination of the annual statement of the company, published in this issue. For a company controlled by stockholders, President Clark has reason to point with pride to the envious low net cost at which the Union Central has furnished insurance to its policyholders by reason of its most liberal dividends.

The evidence that this company has been a real servant to its patrons is borne out by what it did for them in 1909. The total cash paid to policyholders during the year was \$5,691,056.20, in the following manner: Dividends, \$1,504,633.60; death losses, \$2,341,849.01; matured endowments and annuities, \$943,904.01; surrendered policies, \$900,669.58. In addition to this, \$1,329,265.89 has been put aside for dividends to policyholders in 1910, and \$526,729.00 has been added to the surplus of the life rate endowment policyholders, and \$1,392,248.46 was loaned to policyholders upon their policies as sole security.

Excellent Opportunities for District Managers

THE EQUITABLE'S FINE SHOWING.

At the annual meeting of the board of directors of the Equitable Life Insurance Society, which was held on the 17th, the following old officers were re-elected: Paul Morton, president; W. A. Day, first vice-president; George T. Wilson, second vice-president; William Alexander, secretary; C. E. Phelps, treasurer; Gerald R. Brown, comptroller; H. L. Rosenfeld, insurance assistant to the president; Leon O. Fisher, auditor; F. C. Wells, M. D., and T. H. Rockwell, M. D., medical directors.

Mr. Morton's report covered the operations of the society for the last four years and described in detail the economies and improved methods which have been put into effect by the present management, together with their results. The statement of the society's financial condition at the close of last year shows aggregate assets of \$486,109,637.98, an increase for the year of \$13,770,129.15. The total liabilities, including the reserve of \$393,223,558, amounted to \$400,837,318.68, and the total surplus is \$85,272,319.30, an increase of \$4,004,852.40.

The new insurance paid for last year was \$110,943,016 as compared with \$91,262,101. For the first time since 1905 the amount of outstanding insurance shows an increase, which was \$8,869,439. In 1908 the decrease was \$13,647,814. The total amount paid policyholders in 1909 was \$51,716,579.04, of which \$20,102,318.67 were in death benefits. The dividends to policyholders aggregated \$9,609,040.

Mortgage Loans Increased.

The report stated that the total mortgage loans outstanding on December 31, 1905, amounted to \$86,530,982 and were distributed throughout ten States. On December 31, 1909, the total of these loans had increased to \$97,532,648 and they were distributed through 31 States. The policy of the present administration to invest the society's assets equitably in those sections of the country which produce the premiums, so far as it can safely be done, was evidenced by the fact that in the last four years the mortgage loans in New York State have been decreased by nearly \$2,500,000, while those outside of the State have been increased by more than \$13,000,000.

Loans in the West and South are being increased as fast as desirable applications are received, and it was made known in all of the large cities that the Equitable is in the market for loans of this kind. It has not been necessary for the society to take over a single piece of property on account of a mortgage loan, made since July 1,

1905. In the last 15 years the mortgage loans made by the Equitable have aggregated \$165,762,922, and in only seven cases has it been compelled to take over property through foreclosure. In six of these cases the property was subsequently sold at a profit and in the other case the property is held at a higher valuation than the amount of the loan.

In the last four years \$98,574,843 was invested in domestic bonds, at an average rate of 4.71 per cent. The bonds sold and matured in the same period totaled \$64,201,455 and showed a profit of \$674,649. In 1907 and 1908, when the bonds purchased yielded 5.13 per cent. and 4.85 per cent. respectively the sales by the society were on a basis of 4.28 per cent. In 1909 the purchases were made at an average yield of 4.44 per cent. and the sales were made on a basis of 3.39 per cent.

Sold Its Stocks at Profit.

Since January 1, 1907, when the law went into effect requiring life insurance companies to dispose of their stock holdings within five years, the Equitable has sold stocks amounting to \$4,514,143, at a net profit of \$363,605, in addition to which there was a profit of \$254,597 from the sale of rights. The society still owns stocks which are carried on the books at a value of \$40,866,282. The investments in collateral loans, which were placed at an average rate of 5.40 per cent., were as follows: 1906, \$9,350,000; 1907, \$11,412,000; 1908, \$6,500,000; 1909, \$390,000. Loans on policies were as follows: 1905, \$29,340,265; 1906, \$35,354,295; 1907, \$49,615,393; 1908, \$57,053,555; 1909, \$59,954,933. The gross rate of income from invested assets has increased from 3.90 per cent. in 1904 to 4.50 per cent. in 1909.

The first year premium receipts were \$2,651,734 in 1906, \$2,300,652 in 1907, \$2,753,277 in 1908 and \$3,786,293 in 1909. The premium rate for \$1,000 was \$34.80 in 1906, \$35.11 in 1907, \$31.39 in 1908 and \$35.35 in 1909. The ratio of first year commissions was reduced from 59.60 per cent. in 1905 to 45.19 per cent. in 1909 and the ratio of renewal commissions from 8.09 per cent. to 6.19 per cent., representing a total saving in 1909 over 1905, based on the income of 1909 of \$1,426,392.

Though the number of employes was increased from 882 to 993 the active home office payroll decreased from \$1,794,230 in 1905 to \$1,465,596 in 1909. The total salaries of officers, heads of departments, associates, assistants and employes receiving \$5,000 a year or more, was reduced from \$833,300 in 1905 to \$459,700 in 1909. Legal salaries were reduced from \$102,200 to \$45,200, though there was no falling off in the amount of legal work.

CAUGHT.

The efforts of Superintendent Drake to suppress unnecessary insurance "noises" in the District of Columbia has been successful in one instance at least, as the following from yesterday's Washington "Herald" indicates:

After eluding the police of many cities for more than six months, Harry L. Waring, who was indicted for using the name of President Taft in connection with the Bank Depositors Insurance Company transactions last July, has been arrested at Rochester, N. Y. He will be brought to Washington to stand trial late this week.

Waring and his partner, Edward M. Carroll, were indicted July 30, 1909, charged with using the United States mails with intent to defraud. He evaded arrest and finally escaped.

The discovery that the name of the President had been used in some of the alleged deals spurred the authorities to new efforts, and last Friday a report stated he was on his way to Rochester. Postoffice Inspector Carter B. Keene found Waring registered under the name of Harry Walton at the Powers Hotel and took him into custody.

He has consented to come back to Washington without extradition papers. He admitted his identity when he was placed under arrest, and declared he could prove his innocence before an impartial jury.

Waring and Carroll fell into the clutches of the law through their scheme to insure banks and trust companies against loss to their depositors in the event of failure. Claiming the company was incorporated by Congress and approved by President Taft, the pair gathered many banking institutions on their books, and it was not until a small bank in Philadelphia went to the wall that it was charged the concern had no intention of keeping its agreements.

The first annual banquet of the Fire Underwriters of Baltimore, last Thursday, was such a success that it has been decided to make it an annual affair in the future. Many prominent guests from New York and Philadelphia were present. General Warfield acted as toastmaster.

A WIFE'S DIARY.

A few of the choice morsels which John Smith brings home daily for his poor wife to munch on.

BY JANE SMITH.

(Copyrighted by The Chronicle Co.)

Agents Given the Double-Cross.

When John expressed himself as being thankful that his dear old father had died happily, never suspecting him of ever entering a profession worse than plain burglary, I must admit I was taken back for a moment; but, when I remember all I've heard John say about the doctors, how a trip across Nassau street could cure organic heart trouble, and the many other ways in which the agent is given the "double-cross," as John says, I guess he is right. John is firmly of the opinion that what the Legislature neglected to reform is far more important than all the evils which it is supposed to have cured.

Rhodus Bros. Enter New York.

But what seemed to stir John more than his own personal troubles this week was the report that a set of the most unscrupulous tricksters in the business could get a leave of absence from the sheriff of Chicago, come here to New York, and open their shop at No. 256 Broadway, right under the nose of the State officials and of enough insurance laws to swamp a Carnegie library.

John went up to the offices of the American National Selling Organization, the selling agent for the Consolidated Life Securities Company, but it was little information he could get. He found there a Miss or Mrs. M. C. Scully in charge, who, a friend had told him, had been in the employment of the Rhodus brothers for a number of years and was as slick as Birch himself. John was so disgusted with his failure to get a real line on them that he had to content himself with a statement that "it wasn't as bad for the public to be trimmed by a scheming promoter as by a symptom-finding doctor."

Fault Lies with the Agents.

I sometimes suspect that John might be more successful if he took less interest in the business as a whole; but he claims it is the lack of real interest on the part of the agents that is the very root of all the evils. "Take the association, for instance," says John, "has not its officers for years been permitted to voice the payment of such first-year commissions as to make rebating and twisting a certainty, simply because the agents would not make it known that it was not the sentiment of the agents, but

the wishes of a limited number of general agents which made up the association?" John realizes, though, that if there were not agents willing to sign away their future renewals there would be no general agents to give away insurance.

Titles a Factor in Promotions.

While on this subject John expressed his regret that there were not other avenues besides the promoting schemes open for the services of those agents seeking easy money. In other words, the barnacles have not really been driven out of the business, but just into a new branch of it.

Talking on this same subject John says that one of the conundrums of the day is whether or not Congressman Coudrey can get his promotion under way before his term of office expires.

Outside of the high commissions paid the salesmen, about the only thing to make the promotion go is the use of Abraham Lincoln's name and the titles of the promoter. "Naturally enough," says John, "if so much dependence is to be placed on titles, the outcome is a question, for, as Dr. Parkhurst says:

Titles are often like the hafts of Egyptian drinking cups, so much more conspicuous than the cups themselves as to compose almost the entire thing. In that case breaking the handle practically demolishes the whole vessel.

(To Be Continued.)

VOLUME A SECOND CONSIDERATION.

The annual statement of the United States Annuity and Life Insurance Company, of Chicago, which is printed in this issue, gives every indication

that the management is not sacrificing the policyholders' interests for the sake of making a showing in volume of new business.

The greatest part of the business of this company is scattered among the farmers and in the small cities in the Middle West, and with this distribution of risks, and all of its business in small policies, the company has experienced very favorable mortality, all of which is indicative of capable management.

The gain in insurance in force last year was \$1,316,537, and the gain in assets \$101,588.81. With its present surplus to policyholders equal to over half of its total admitted assets of \$490,000, the officers of this company have made it all that the policyholders have reason to expect, and if the present pace is maintained the progress of this company should be gratifying.

President, HENRY A. SALZER.

Sec'y. and Treas. WM. T. SMITH.

WHAT'S COMING?

Yesterday at Albany three bills were introduced, based on the report and recommendations of Superintendent of Insurance Hotchkiss, which repeal the articles of the insurance law controlling co-operative fire insurance companies and all sections of the law having to do with Lloyds associations.

One prohibits the organization in this State of a company for the purpose of insuring domestic animals and live stock on the co-operative insurance plan. Another bill pending in the Legislature will make it possible for stock insurance companies hereafter to do a live stock insurance business. This will also permit stock companies of other States to write insurance of this kind in this State.

The second bill authorizes the insurance department to make an investigation of every Lloyds association which does business in the State and determine whether it is for the best interests of the State that it continue to do an insurance business.

The most important of the three bills introduced is that which relates to town and county co-operative fire insurance. It divides the companies of this class into advance premium companies and assessment companies, and the latter into town companies and county companies. It recognizes all existing companies and associations of this kind and permits them to continue in business on obtaining a certificate of authority from the Superintendent of Insurance.

It limits their operations too. Advance premium companies which have \$1,000,000 of insurance in force may do business throughout the State on obtaining a certificate from the department; county companies cannot do business outside of five contiguous counties and town companies outside of one county.

The several statutory changes recommended by Superintendent Hotchkiss, if made, will work some very material changes, especially among the casualty operations, in this State at least. It indicates the general well-defined purpose of the whole United States to improve on the prevalent antiquated system of regulating insurance. The employers liability agitation and the disturbed conditions at Washington over the proposed model Federal insurance code which has been hanging fire for years, together with the Federal incorporation bill now before Congress, may tend to delay any insurance legislation in any of the States until disposed of or settled in some more or less definite form. There seems to be a universal feeling among legislators that insurance has reached

a dignified age and must be treated respectfully and given the square deal. Footballled, banged and battered in the past it has attained a position now that makes the legislator and the political grafter take notice. For this reason it is quite probable that immediate future insurance legislation is not imminent.

ANOTHER MISCARRIAGE.

The life of the professional insurance company promoter is not always a rosy bed of ease. Some make a good get-away, but the amateurs are almost certainly headed for disaster.

The genius that conceived the idea of an American omnibus insurance concern modestly stated that it contemplated a few co-related lines. That was going some, but it fell flat. Then another scion of Solomon arose, cometlike, and raised the 16 to 1 ratio to 94 varieties.

This may be progression, evolution, or simply common sense. There is indicated in the numerous changes of the insurance laws at Albany that the country is growing in intelligence equally with the birth rate and the death rate and the other unreliably gathered statistics of the expert sharks who juggle figures for pay.

Between these aviations of the promoting thermometer there have been various ambiguous and anonymous company formations announced and out of the whole number of 60 new ones announced and started in 1909 not a single one was pulled off, unless an exception is made of the emasculated couple of concerns that tried to get into the business.

Comes now the explosion of the great Southern proposition to hang everybody by the heels. It proposed to write about 57 varieties of insurance. Its location was somewhere in Tennessee. Its address was almost anywhere the postoffice directory gives a name in that State. Its apparent head was the same gentleman whom the authorities of South Carolina have been trying to extradite for trial under an indictment for divers and sundry charges in connection with the operation of the Seminole Securities Company, organized to promote a similar concern at Columbia.

Thus it is that the cat must have a cellar.

FOR NEW LINES.

Chamney S. S. Miller, assistant president of the Continental Casualty, is in the city to arrange for the new lines which the company has for sometime contemplated entering. He is gay as a lark over getting back to Broadway.

ACTUARY VAN CISE RESIGNS.

The veteran actuary of the Equitable Life Assurance Society, Joel G. Van Cise, F.A.S., resigned his post on Thursday of last week on account of illness, and his resignation was regretfully accepted. No successor has as yet been appointed.

Mr. Van Cise was at the same meeting appointed consulting actuary of the Equitable, which will, therefore, continue to have his services, so far as he is able to give attention to its affairs. He is at the present time ill with a severe attack of influenza, at his home in Summit, N. J., and as he is 66 years of age, recuperation is a slow process. His connection with the Equitable dates from 1867, covering, therefore, nearly 43 years. He has been in the actuarial department from the start; and there his remarkable mathematical abilities early attracted the attention of the late Geo. W. Philips, actuary of the company, with the result that he was made assistant actuary in 1872, and upon the death of Mr. Philips was appointed actuary in 1898.

HIGH-SOUNDING SENTIMENT?

"Is policyholder control in actual practice anything more than a high-sounding sentiment?" is asked by the president of a stock life insurance company. The opinion of President Clark can be inferred from the following excerpt of a recent statement to the policyholders of the Union Central Life.

Much has been said in these days about control of life insurance companies by policyholders as being the model method of organization. Legislators have gone so far as to provide a way for stock companies to mutualize.

A mutual company properly managed is no better than a stock company so managed, and vice versa. An improper management in either form has its remedy under statute.

A report recently issued by an insurance commissioner gives the result of the last reported elections held by the mutual companies operating in his State. Tabulation of them is as follows:

No. of Policies.	Present at Election.	Assets.
978,209.....	62	\$557,286,670.76
639,746.....	93	539,038,968.13
200,819.....	59	121,129,631.65
177,518.....	1,715	99,722,403.26
78,538.....	495	47,961,705.34
59,770.....	27	25,948,801.10
58,950.....	79	17,064,351.43
48,595.....	159	32,490,143.67
26,671.....	139	5,230,126.46
6,130.....	9	1,863,052.21

2,274,946.....2,829\$1,447,735,854.01

It is evident that the policyholders

in these ten mutual companies were perfectly willing to allow the control and management of their one and a half billion of assets to rest in the hands of an almost infinitesimal fraction of their number.

A recent effort of policyholders, so-called, to reorganize a large company,

that is to say, to put out the "ins" and put in the "outs," resulted in absolute failure, with large financial loss and discredit to the originators of the movement. Upon the other hand, public sentiment recently compelled three presidents of mutual and stock companies to resign.

FORTY-THIRD ANNUAL STATEMENT

IN NEW ENGLAND

A Feast of Reason.

"Plain living and high thinking" were in evidence at the annual dinner of the Boston Life Underwriters Association at Young's Hotel last Friday evening. The newly elected president, Edward Marsh, was in the chair, and his introductions of speakers were felicitous and of gratifying brevity. In his opening address he touched upon the value of life underwriters associations bearing particularly upon their usefulness when the critical situation arose in New York State. The second part of his address was mainly an admonition to his colleagues to forget the woes of the past and to set their faces towards the morning.

Vice-President Howland, of the National Life of Vermont, discoursed upon "The Field Man's Opportunity." He approached the subject with a fund of witty and appropriate anecdotes. He saw in the broadening appreciation of life insurance, not only by the public at large, but also by the head of the Nation, and other men of importance, a large element of the field man's opportunity. During the present clamor about the cost of living and the elevation of prices, life insurance was the one thing that had reduced its price and increased its values. He then adverted to the recent time when business men, unable to raise money in any other way, except at exorbitant rates of interest, were able to procure it at a reasonable rate by means of loans on their life insurance policies. Mr. Howland extolled the quality of insurance supervision in Massachusetts in the highest terms, and wove a chaplet of respect to the memory of Elizur Wright. He recalled how Mr. Wright, alone and unaided, pitted his conviction against that of the actuarial authorities of Great Britain in regard to the case of the International Life Insurance Company; how those authorities had regarded the then obscure insurance commissioner with disdain, only to acknowledge later that he was right when the International Life went down to its doom. The speaker regretted the absence of any fitting memorial to Mr. Wright, and volunteered the opinion that the erection of such a memorial was a project which the Boston Life Underwriters Association might well set in motion.

A. F. Sheldon gave a strong talk on "Man Building as Related to Business Building." He considered that the salesman was both bought and

made. Nature unaided fails, but the training of the natural powers develops success. Each man has qualities that can be developed best in some particular line of effort. The three great divisions of mental effort are: Knowing, feeling and willing. Faith is also a great attribute of the salesman. He must not say or do or teach anything that will not build confidence. He must have faith in his company, faith in the applicability of a certain policy for a certain man, regardless of the premium involved, and his reward will come in the natural course of compensation. The two devils of Doubt and Fear have killed more successes than battles have killed men. The business builder must be progressive. He must be able to answer in the affirmative such self questionings as: "Is your judgment better this week than last?" "Are you making a better use of your time?" "Are you learning things that are new and good?" The salesman must have an honest desire to be of service and that immediately. A popular motto brought up to date says: "Do it right, right now." A satisfied patron is the best advertisement for a salesman, whether he be in life insurance or other lines of effort.

The last speaker was Charles A. Bradley, representing the Metropolitan Life in Maine, and also second vice-president of the National Association of Life Underwriters. His talk turned upon "The Elements of Successful Life Insurance Salesmanship," and, while unpretentious, was strong and pointed. He set forth the value of personality in a life agent. He must be a good "mixer" and of pleasing address, a student of the business, having a knowledge of his own company, and of other companies, to enable him to meet all arguments. System and a carefully compiled list of prospects would prove a regular source of renewal of business. Mr. Bradley alluded to the condition that, while the elements of successful soliciting were well known and frequently repeated, yet the successes were comparatively few. He accounted for this by the fact that so many men do not do their level best in applying what they know, nor, when they do it, do it at the time it ought to be done. These obstacles can be overcome by a resolute training of will power.

The usual orchestra was present at the dinner, and its blatant strains were a great preventative of conversation.

Capital Subscribed.

It was announced last Thursday that the Standard Fire Insurance Company of Hartford, Conn., had perfected

its organization, and would begin underwriting operations in March. The entire authorized capital stock of \$500,000 has been subscribed for on the basis of \$200 a share, thus rolling up a capital stock of \$500,000 and a surplus of an equal sum. The first payment of 50 per cent. was made last week, and the second one is due March 15. As soon as final payment is made, the company will make arrangements to enter various States, establishing agencies and begin issuing policies.

Special Agent Cowee.

Geo. F. Cowee, for the past 12 years in charge of the local department of the Field & Cowles agency, and for over twenty years in the service of that firm and its predecessors, will, on March 1, enter the service of the National Fire of Hartford as special agent for New Hampshire, Eastern Massachusetts and Rhode Island, and, in that capacity, assistant to Special Agent W. H. Lewis. Mr. Cowee, who is in the prime of life and is one of the popular figures of the Boston "street," has the good wishes of hosts of friends in his new field of endeavor.

A Model Fire Insurance Company.

The superb record of the Phoenix Insurance Company of Hartford, Conn., as a dependable purveyor of indemnity for fire loss, receives another notable addition, as disclosed by its 111th semi-annual financial statement, as of January 1, 1910. The total cash assets of the company on that date were \$9,941,424.23, of which \$3,066,837.38 was net surplus over all liabilities, including the cash capital of \$2,000,000, the reserve for re-insurance of \$4,293,241.71, and proper reserves for other purposes. During the year the Phoenix gained \$1,107,152.33 in assets, \$325,744 in reserve, and \$897,662.80 in surplus. The company's surplus to policyholders is \$5,066,837.38, and it has paid total losses since organization in excess of \$65,696,000.

1860 50th YEAR 1910

HOME LIFE

Insurance Company of New York.

GEORGE E. IDE, President.

Assets	\$23,626,018.63
Liabilities	21,858,691.52
(Including Deferred Dividend Fund)	
Dividend Endowment Fund	
(Deferred Dividends)	2,119,044.00
Net Surplus	1,767,327.00
Insurance in Force	92,532,583.90

The record for 1909 shows the following GAINS:

Insurance in Force	\$4,164,239.00
Assets	1,917,117.00
Deferred Dividend Reserve	148,581.00
Contingency Reserve (Surplus)	655,149.17

NEW YORK THEATRE INSPECTION.

Rhinelanders Waldo, commissioner of the fire department, has issued orders for a more rigid inspection of theatres. The order conveys instructions to all companies regarding the duties of men detailed at theatres. Among other things the men must test alarms at five-minute intervals before a performance, cause the asbestos curtain to be raised and lowered before each performance and lowered at the close; inspect all fire appliance, and in other ways see that fire and panic-preventing equipment are in condition for instant use. The order reads as follows:

Members of the department detailed to theatre duty will report to theatres at 1:30 o'clock for afternoon performances and 7:30 o'clock for evening performances. On arrival at the theatre, they will immediately make inspections to determine whether all exits are open, lighted and numbered, and all outside fire escapes, courts and approaches thereto are free from obstruction, especially of ice and snow, and are properly lighted.

They will inspect all fire appliances for the purpose of learning its condition and readiness for immediate use, and see that the keys are properly placed.

They will inspect all parts of the theatre, especially the stage, wings, traps and flies, and see that there is no accumulation of rubbish.

They will cause all doors in the proscenium walls to be closed during the performance.

They will see that the border lights are properly protected by shields.

They will send two rounds of test signals on the Morse key of the special building fire alarm box at intervals of five minutes and will enter on reports whether replies were received from the telegraph bureau.

Where explosives, fire alarms, color fire, or materials of a hazardous character are used, they will cause pails of water to be placed near by for cases of emergency.

They will cause all articles used for color fire to be properly cooled before put away.

They will inspect the permit of the bureau of combustibles authorizing the use of explosives.

Members of the theatre detail will report all violations or infractions of department regulations and any unusual occurrences while on duty.

Last week Senator Harden introduced in the New York Legislature a bill amending the present insurance law by providing that a person negotiating fire insurance who delivers to insured a policy of a fire insurance corporation authorized to do business in the State shall be deemed to be agent of the corporation; that receipt by him of premium shall be deemed payment to corporation, and that the policy shall be binding upon that corporation unless it shows that such persons in negotiating insurance acted without its authority.

NEW ENGLAND BREVITIES.

At the Massachusetts hearing on the bill to authorize insurance against flood damage, there was no opposition, and George P. Field spoke in its favor. The bill to permit insurance upon the lives of domestic animals was also unopposed, while two speakers gave arguments for its enactment.

A bill to permit life insurance companies to issue policies against permanent total disability to an extent not exceeding the amount of life insurance covered by the same policy, was the subject of a hearing by the Massachusetts committee last week, and while strong arguments were presented in its favor, a number of dissenters were also heard.

William A. Deming, for some time in the service of the American Central, will become special agent for New England of the City of New York Fire.

THE 1910 POCKET INDEX.

The Spectator Company has just issued its 1910 Fire Insurance Pocket Index. As usual, this chart is the first published, presenting the latest statistics of all the fire insurance companies transacting business in the United States. It gives the comparative statements for the preceding ten years and contains much other interesting information in its eighty pages. Besides the information in the main tables, it contains a list of unlicensed companies, the Lloyds and retired companies, monthly fire losses for six years, large fires in the last two hundred years, recent conflagration losses, etc., etc., with the usual table of contents.

The Massachusetts legislative insurance committee reported last Thursday in the House a bill empowering insurance agents to receive commissions on policies taken out for themselves.

WESTERN UNION CONDITIONS.

There are no really new developments in the situation growing out of the Continental and Fidelity Underwriter's entering the Western Union. It is the one live topic in the West. Everybody is seeking information, and there is nobody to give it. While it was expected that there would be something of a rush of non-union companies to the union if the Continental took the lead, no rush has developed. All around it is a case of "want to but dassent." In conversation a number of managers admit freely that the leading non-union companies ought to go into the union, that if they would go in in a body it would be a fine thing for the business, that personally they favor unionizing. But in all cases there is a string attached—it must be a general movement; and so far nobody appears to have taken the initiative to start a general movement.

President Louis S. Amonson of the Peoples National was in Chicago last Friday and Saturday. He called on a number of non-union managers as well as some union ones. He is heartily in favor of the unionization of a number of leading non-union companies and his would be one of them, but he is not ready to go it alone. Neither would it look well for him, an easterner and head of a very young company, to call a meeting of the Western non-union managers, men who have been on the ground for years and represent large interests in the West. Presidents Dunham of the Firemens, Hoadley of the American and Stevens of the Agricultural were in Chicago last week. Mr. Dunham was out to see the company's new Western department, but it is understood that Messrs. Hoadley and Stevens did some canvassing of the situation. One company which has been mentioned as a possible candidate for union membership has called its Western field man to the home office to discuss the situation.

"Union Forever."

There still is good reason to believe that there will be considerable unionization. It seems impossible that a number of managers should express the views they do and not eventually find among their number a Moses to lead them out of the wilderness. The question is not entirely up to them in every case. It is known that some of the Eastern executives are much dissatisfied with the heavy expense ratios their companies are running up in the West. While this does not show in their statements necessarily, as lower expenses in the East and South help

to neutralize the high ones of the West, the executives know it and are insisting upon improvement. In some instances the Western manager has never forgotten a disagreeable experience he had with the union and would not consider joining it, but the home office people are inclined to put on pressure.

The Field's Force.

The influence from the field is also likely to be felt soon. The local agents are considerably stirred up. They want to know, so they ask the field men and they cannot tell them. Some field men are now going through the experience those of the Phenix went through a month or two ago. The agents are not satisfied with assurances that they will not be disturbed. They will be disturbed. Even if no other companies should follow the Continental and Fidelity Underwriters into the union and these two companies should take the full two years allowed them to get their houses in order, many an agent is going to be called upon to make choice between running a non-union, a mixed or a union office. The more companies are uncertain as to their movements, the longer the agents are going to be unsettled. It is not unlikely that a number of companies will have to declare themselves within a few weeks. If they continue to attempt to sit on the fence, it will weaken the confidence of their agents in them and lay them the more liable to the attacks of those companies about whose continued non-affiliation there is no doubt.

The "Silent" Voters.

There is another element in this situation which will have some influence. A number of managers of first class non-union companies are ashamed of the company they are keeping. As one manager, a non-union man, put it, "They feel like 'scabs' outside of a labor union." They know that they have not the standing they would have if they were in the union. Nearly every union company is an institution of good standing and, notwithstanding numerous lapses, most of them do business in a creditable way. The non-union companies, on the other hand, are a nondescript class, varying from some of the very best down to the every poorest that can pass muster with insurance departments. It is not pleasant for a high grade manager to be classed in a general way with the bobtails for which he is not accountable and of which he is ashamed. The field men are more or less in the same boat. While the union specials have the commission

question settled for them, a non-union special has to be suspicious of most of his associates, for he does not know which ones of them are undermining his business by paying 5 per cent. extra for it on the quiet. While there are some splendid field men representing non-union companies, they recognize the fact that there are as many others that are not high grade. There are plenty of them who down in their hearts would be glad if they belonged to the State Board instead of the field club or league or whatever the non-union organization is called.

DONNELLY MUST STAND TRIAL.

The courts of Ohio have overruled the demurrer attacking the validity of the indictment of Judge Michael Donnelly, former president of the defunct Ohio German Insurance Company, upon two counts of perjury returned by the Grand Jury in January, 1909.

Two of the specifications made by Donnelly's counsel as regards the item of unpaid licenses and claims of the insurance company were sustained by the court, but he held that the contention of the defense to the effect that nothing contained in the affidavit went to show that the Ohio German was an insurance company, or that the affidavit upon which the perjury was based was made without intention of filing it with the State Insurance Commissioner were not well taken.

Judge Chittenden cited several Supreme Court decisions and declared that the Legislature had expressed disapproval of certain technical objections often urged against indictments. The demurrers were overruled upon the general ground that perjury may have been committed by Judge Donnelly when items set forth as fact in an annual statement are charged to have been false, and which statement was made by Judge Donnelly under oath.

TO WIN IN COMPETITION

Represent the Company whose agents have the strongest fighting material and the most telling arguments. Everyone knows the superiority in low cost to policyholders, (due to high interest earnings, low death and expense rate) of

THE Union Central Life Insurance Co. of Cincinnati.

Assets, \$74,523,966.28
Liabilities, \$72,324,302.92

JESSE R. CLARK, President.
ALLAN WATERS, Sup't of Agents.

TO LIMIT COMMISSIONS BY LAW.

Insurance Commissioner Hardigan, of Minnesota, has caused a bill to be prepared to be introduced in the next session of the Minnesota Legislature, limiting the amount of commission to be paid by fire companies to fifteen per cent. The Commissioner holds that underwriting profits are not excessive, and that the only way to reduce the cost of fire insurance is in a reduction of the losses and the expenses, and he believes that if the companies are unable to cope with the situation, the amount of commissions paid should be regulated by the State. It is reported that Commissioner Hartigan found that some agents in his State had contracts calling for a commission as high as forty-five per cent.

While this action of Commissioner Hartigan may appear to be premature, in view of the general investigation as to the expenses of fire insurance companies which is being carried on by a special committee of the insurance commissioners, it is indicative that legislative action is certain to follow their report.

It is understood that a public hearing will be held by the first of May, at which insurance company officials and others can present their views to the commissioners.

It may be well expected that representatives of several of the strongest commercial organizations will be there to advocate a reduction in commissions as a step toward generally reducing the fire insurance rates. In this they never fail, though their support in reducing the fire hazard is sadly lacking.

As Evans Sees It.

Henry Evans, president of the Continental, when interviewed concerning Commissioner Hartigan's action, said:

The regulation of commissions through State laws is, in my opinion, sure to take place, and at any early date, unless the companies and agents get together and control this feature of the business themselves. Personally I favor a flat commission of 12½ per cent., with an added contingent or profit sharing commission of 12½ per cent. more, these payments to cover all charges at the agency, postage, exchange, license, local tax, etc., thus preventing any charge for extras.

We may as well face the situation and get busy. If we do not, the public, acting through the insurance commissioners and the legislatures, will do the work for us, and every State will do something different, probably. I believe in fully compensating the local agent, but over compensation leads to excess competition rebates and in the end less profit for the agent than if the commission were limited to a reasonable figure in the first place. No sane man can do other than deplore the fire waste in this country,

and in my opinion it will be soonest reduced by the adoption of a contingent or profit sharing commission and the general use of details scheduled for the making of rates on all classes of risks.

THE STANDARD FIRE TABLES.

"The Standard," of Boston, announces the first copies of the 1910 edition of the Standard Fire Insurance Tables were issued last Saturday, and orders will be shipped as rapidly as possible.

The new edition has been enlarged to 104 pages and now presents the ten-year statistics of 238 companies to-

gether with the profit and loss and comparative rank tables given only in this publication; list of state officials; reinsurances and retirements from 1905 to 1909 inclusive, and two new lists, one of underwriters' agencies and the other of surplus line companies.

The form and arrangement of previous editions have been conserved and the same care in the compilation of the statistics presented which has secured for the publication its high reputation for accuracy and a constantly increasing sale, has been exercised in the preparation of the present edition.

Jas. D. Hallowell, Treasurer C. G. Yates, Secretary.

HON. E. C. STOKES, Chairman Board of Directors,

THE FIRST FRUITS OF COMPENSATION.

The Casualty Company of America, under President DeLeon, is out with the first attempt of the employers liability insurance companies to supply the growing demand for compensation as distinguished from liability insurance. It has put out an "Employers' Compensation Policy," providing for the payment for each employe killed or injured by accident in the course of his employment the following benefits:

For loss of life, or for the loss of two limbs, or sight of both eyes, a sum equal to one full year's wages as earned by such employe; one-half of that sum may be paid for the loss of one limb, and one-third for the loss of sight of one eye; for minor injuries, the list of fixed compensation is correspondingly extended.

For temporary disability from accident, one-half of the weekly wages or salary earned may be paid during the time of disability.

The employer is himself authorized by the company to make these settlements immediately upon the occurrence of the accident; and the company agrees to refund all money, thus expended by him, without regard to negligence on the part of either the employer or the employe. It is also provided that differences as to amount of compensation may be referred to arbitration.

In case an employe will not accept the compensation given by the policy and resorts to the courts under the employers' liability law, the company agrees to defend the suit or adjust the claim if possible, and generally to indemnify the employer, precisely as under the regular forms of employers' liability policies.

The Casualty Company of America has reached a large number of employers and is daily enlisting the interest of others in this manner. In connection with this work President DeLeon states in a letter addressed to a prominent employer, that the company has engaged the services of an expert who is familiar with the practical operation of the plans followed with great success in other countries, and is in a position to give interesting information on the subject.

The expert referred to is Herman Leroy, a gentleman formerly connected with one of the large life companies as executive special agent, and more recently as general manager of the Liberty Life Insurance Company of New York. Mr. Leroy is known to have devoted a great deal of time to the study of the problems of workmen's compensation, with the direct purpose of initiating at the earliest

possible moment a plan of this nature.

The introduction of this policy renders it unnecessary for the American manufacturer or other employer of labor, who is alive to the equities that ought to govern the compensation of workmen and their families for the ruinous consequences of industrial accidents, to wait for the slow process of the amendment or repeal of our present barbarous laws.

CREDIT INSURANCE.

Of all the forms of insurance underwriting, credit insurance is the least understood by, and the most difficult to explain to, the general public. Companies writing this form of indemnity are besieged with inquiries and importunings for insurance against "bad debts," as the Credit Men's Association would term it.

Landlords, grocers and small dealers in retailing the ordinary commodities of life, ask for a guarantee that one John Brown will pay his account promptly. Even some agents of companies writing this line send in applications for insurance of leases and rentals and borrowings involving a financial endorsement, or, in other words, the endorsement of a promise to pay, do not seem to grasp the idea of credit insurance in the sense in which the term is technically used in underwriting.

Credit insurance, to make it perfectly plain, is issued on exactly the same principle as employers' liability insurance. A manufacturing or wholesaling concern is selling goods on credit, and its records show a loss on sales, say of an average of ten per cent., for the past several years. Then the credit insurance company will undertake to insure it, under agreed (and improved) conditions against any excess over that loss for the coming year, this to be determined by a comprehensive and intelligent system of keeping accounts and records.

For instance, the Pennsylvania Railroad Company can figure to an exact nicety at the beginning of its fiscal year what its results will be at the end of that year. This is due to the fact that every ordinary avenue to loss and leakage has been covered by insurance available. It buys every known form of policy that can protect its revenues. Its employes are under fidelity bonds, its bank deposits are guaranteed, it carries employers liability insurance, fire insurance, boiler insurance, elevator insurance, burglary insurance, and about any form that is offered of value. Thus it can figure out its "terminal."

Credit insurance is in effect a stop-gap for excessive losses. Like all

other lines of underwriting, it is based on the law of average and the expectation of a profit for its service. And, like the fidelity companies it depends upon the preventing of losses for its profit. In fact the prevention, and inspection system of any insurance company is its sole salvation, and in this lies its value to the holder of indemnity against loss.

Speaking along this line the magazine, "Independent," in the current issue, has this to say:

Credit insurance is exceedingly helpful to the credit man, in establishing his limits. It is likewise a safeguard and valuable protection to the interests represented by him. While merchandise is in the warehouse or salesroom of the firm engaged in its merchandising, and this merchandise stock is protected by fire insurance, the value of it is well defined, but upon the delivery of these same goods to a transportation or public service company, they pass from under the control of the shipper and without credit insurance the selling merchant has nothing but the entry on his books to show as an asset. Generally speaking, the selling merchant has no collateral security, and were it not a fact that the average purchaser is honest, business could not be conducted at all. No bank could extend credit as the merchant does with comparative safety, and in these days it is coming more and more to be a fact that no merchant can afford to do it in the long run. Experts have held that panics would be entirely eliminated if a sufficient line of credit insurance were carried by manufacturers and jobbers, since panics are to a very large extent the result of loss of confidence and a sense of insecurity. Such a loss of confidence and such a sense of insecurity would be impossible if the merchants' profits were guaranteed against loss by a judiciously selected line of credit.

Application for admission to Massachusetts and Rhode Island has been made by the Central National Fire of Chicago, which is to be represented in Boston by Crain, Jones, Bixby & Company, and at Providence by John Eddy & Son.

POLITICS AND SURETYSHIP.

The change in presidents of the Illinois Surety and its retirement immediately afterward from the Surety Association of America has caused much comment at Chicago. At the company's office the statement is given out that it considered it wise to withdraw from the organization on account of the prevalent strong feeling against combinations. No statement has been made of Mr. Blount's reason for resigning the presidency, but there is reason to believe that it had a close connection with the company's decision to leave the surety organization.

The surety business of the American Trust & Savings Bank of Chicago is of considerable importance and has been much sought by representatives of surety companies. It was written for some years at a cut rate, and it was a recent attempt to raise the rate to tariff which brought the question of tariff rates to the attention of Judge Landis and resulted in his making his famous announcement that he would accept no more corporate bonds because the companies were in a combination and were charging extortionate prices. This pronouncement by Judge Landis is cited by the Illinois Surety as an indication of the sentiment against combinations. There are those who believe the Illinois Surety is getting in shape to do business in his court, and, incidentally, to capture the line of the American Trust & Savings Bank.

Former President Blount appeared to take much pleasure in his membership in the Surety Association of America. He made some good friends among the Eastern executives and enjoyed having them for friends. There is no statement to the effect that he was opposed to the company's withdrawing from the association, but it is quite likely that he was.

It is a noticeable fact that immediately upon the withdrawal of the Illinois Surety from the Surety Association the minimum rate on bonds for receivers and trustees was reduced from \$10 per \$1,000 or more, to \$5 for \$1,000 or less. This cuts exactly in half the rate on a bond for \$1,000, which Judge Landis usually requires in small cases.

What's the Game?

The new president was formerly a United States Senator from Illinois and was largely instrumental in the conception and organization of the Illinois Surety, and in political circles, it is freely asserted, for the purpose of cornering the Federal business at Washington and the political business

in Illinois, but his failure of re-election caused something of a misarrangement of the original plans of the architects necessitating material changes.

Hopkins is a self-reliant man and the breaking away from the surety association is characteristic. Every man who has freshly entered the insurance field in an executive capacity

knows it all and with his little broom and buncombe starts out without chart or compass to be a prodigy. If he does not fall by the wayside he may attain wisdom. And so there is hope that President Hopkins may soon learn that politics and insurance won't mix for long. Incidentally he will probably realize that he tore a big hole in his shirt by turning rebel.

THE AMERICAN CREDIT INDEMNITY.

Four issues back "The Chronicle" made this comment:

The American Credit Indemnity Company has safely passed the refining process of the crucible and emerges with the highest possible evidence of soundness and security.

During the period of its examination and subsequent reorganization, covering the past few months, the company has been the target for bitterest attacks from some competitors that were utterly reckless in mendacious energy.

But the company survived in good form and that fact is its best asset today. Few companies have ever weathered the fierce, biting blasts from which it has calmly emerged to a safe anchorage. The wolfishness of the pack toward its wounded is a sad commentary on insurance human nature.

A Square Deal.

This comment was a square deal, and was based on an official statement from the Superintendent of the New York State Insurance Department, in which he said:

After an inquiry into its affairs which has been most exhaustive, it finds that even after a necessary reduction in the capital to \$350,000, there is a surplus to policyholders of \$360,000.

This department is informed that agents of rival companies are making statements not based upon facts for the purpose of twisting this company's business to their companies. In considering any such statements, you should consider the fact that this department has determined, after a most exhaustive examination, to permit the company to continue business, and that this would not have been done had it not felt that such continuance was entirely safe for present and future policyholders.

In computing the reserves of this company we used a much higher ratio than ever before for credit insurance business, a basis which, it is confident, will be at all times sufficient to fully protect policyholders. The same rule of reserving will hereafter be applied to all credit insurance.

Permit me to add that the election of E. M. Treat as president of this company, and the choice of Isaac H. Lionberger as chairman of its board of directors and finance committee, and thus its financial executive, has the approval of the department.

A Good Deed.

This statement of Superintendent Hotchkiss is impregnable and is unique in that it is the first instance on record where a State insurance official has gratuitously come to the proper defence of a company that had received a temporary wound and was being hounded. The figures he names were the result of two examinations, the increased reserve ratios and the second a very elaborate one by New York and Massachusetts jointly. But the increased reserve ratio and the assets unadmissible—but available—the surplus to policyholders is easily

half a million. The company is in far better financial condition because of the "storm" than it was before.

There are a few points that it will be well to bear in mind in connection with the matter, as follows:

The admitted assets are upon a practically cash basis, consisting of only four items:

First mortgage bonds, cash, premium notes, accrued interest.

The management felt that it would be the best policy to make the statement on a basis of quick assets, excluding such slow and doubtful assets as "Premiums in Course of Collection," etc., etc.

While premiums in course of collection not over three months due may be legally used as an asset, yet it is not an asset in hand, and its statement embraces only solid substantial securities—cash or its equivalent.

The total reserves carried, are in excess of the year's writings.

The NET amount paid to policyholders for losses during 1909 amounted to \$941,196.

It must be remembered that in credit insurance the policies run twelve months, so that the losses paid during a given year represent losses on policies written on premiums paid during the preceding year.

The net premiums for the panic year 1908 amounted to \$1,387,000, whereas the losses paid amounted to \$941,196, which shows a gratifying conservatism of judgment in credit underwriting.

The company has paid to its policyholders, as a result of excessive losses sustained by them through insolvency of their customers about \$7,000,000.

During the latter part of 1907 and the business depression in 1908, there was never a let-up in the reimbursement of its policyholders.

In the last two years alone the company has paid its policyholders for excess losses under its credit policies the sum of \$2,286,987.

President E. M. Treat thus expresses himself in discussing the matter with "The Chronicle":

"I am sure that you realize that a time of reconstruction is always hard, at least for a time, for any institution, but in our opinion it will result in our case in building on deeper foundations. As more solid success, more real profit and genuine progress came to life insurance companies after their "reconstruction" and a greater development of courage, faithfulness and determination upon the part of agents was likewise had, I believe that there will now follow greater strength and prosperity for our company and its interests than heretofore."

IN TROUBLED WATERS.

The surety people are all in the air about the immediate future. The standard manual of rates is practically a "dead one." The principal point of disturbance (and what threatens the whole structure) seems to be fidelity and burglary rates for banks.

Some of the companies write both lines and are thus in position to make concessions on one line in order to secure the other. This is a big handicap to the single line companies, and the human equation must be reckoned with when it comes to the drawing of fine distinctions and the delicate balancing of the scales of exact justice and fairness. This disturbs the "mutuality" of the surety and burglary associations.

For some weeks there has been ominous weather conditions in the surety sky. The burglary war has been active and now it is indicated that a general riot is imminent. The peculiar feature of the present outlook is that the trouble threatened is not due to the youngsters, as in former days, but to the older heads and the fathers in Israel. Just what the result may be would require the wisdom of two Solomons to forecast. In the meantime everybody is speaking easy and watching the weather.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,
takes an advanced step in the interest
of the policyholder by the adoption of
the following liberal features in its new
policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy
year.

Thirty-one days of grace in payment
of all premiums after the first year.

Paid-up insurance or cash surrender
value or extended insurance after two
years' premiums have been paid.

Loans for the full cash surrender
value.

Policy payable in one sum or in instal-
ments for terms of years.

Policy incontestable, and no restric-
tions upon residence, travel and occupa-
tion, after the first policy year, except as
to military or naval service in time of
war.

Right of the insured to change the
beneficiary.

Liberal re-instatement privileges.
Every effort has been made to make
this new policy the very perfection in a
life insurance contract.

Department Bills in Albany.

Among the bills offered on behalf of the Insurance Department at Albany in addition to the important "standard provisions" bill offered by Assemblyman Allen to regulate personal accident and sickness policies, are to be found the following:

A bill amending section 70 providing under subdivision 3 for insurance "against loss or damage to property caused by losses or by any vehicle drawn by animal power and for loss or damage the person insured is liable"; under subdivision 4 for "guaranteeing the performance of insurance contracts where surety bonds are accepted by States or municipalities in lieu of actual deposits"; under the present subdivision 8 substituting for "against any other casualty specified in the charter which may lawfully be the subject of insurance," the following, upon the lives of horses, cattle and other live stock"; under the present subdivision 9, repealing the same relating to automobile insurance and substituting the following: "Against loss or damage to automobiles and against loss by legal liability for damage to property resulting from the maintenance and use of automobiles."

Amending as to Reserve on Reinsurances.

Another bill introduced by Assemblyman Allen, amending section 22, wiping out the Henry Evans rule for computing the reserve upon reinsurance at a pro rata portion of the net reinsurance rate, and requiring the reinsured corporation to be liable for the remainder of the reserve originally charged against it, and substituting the following:

When a reinsurance agreement is made between other than life insurance corporations, the parties to such agreement shall, upon the policies involved, compute their unearned pre-

mium funds as follows: The reinsurance or ceding corporations shall, upon the portion of its liability not reinsured, maintain a reserve to be computed in accordance with section 118 of the insurance law; the corporation assuming liability by reinsurance from the corporation issuing the original policy shall maintain a reserve equal to that which the reinsuring corporation would have been required to maintain upon the amount reinsured had it retained the liability ceded by it.

This would have the effect of requiring the company which takes over business by reinsurance to carry as large a reserve as the reinsured company was required to carry.

Automatic Sprinkler Insurance Authorized.

The same bill provides for amendments to sections 25 and 56 permitting companies which prior to October, 1892, were licensed to transact both fire and marine insurance, to continue to do so, and also amending section 10 by permitting fire insurance companies to cover

against loss or damage by water to any goods or premises arising from the breakage or leakage of sprinklers, pumps or other apparatus erected for extinguishing fires, and of water pipes, and against accidental injury to such sprinklers, pumps or other apparatus.

and requiring

that a corporation including in its charter a provision to assume any of the risks of ocean marine insurance as specified in section 150 of this chapter must have a capital, paid in in cash, of at least four hundred thousand dollars.

This bill also amends section 121 so as to permit a standard fire policy to be "printed, written or typewritten, with any size of type or any size or shape of paper which shall have the written approval of the Superintendent of Insurance."

Important Amendments to Article 1.

Under another bill offered by Assemblyman Allen article 1 of the insurance law as amended in section 6 so as to make the fee for filing the charter of fraternal societies \$30 instead of \$10, as at present; and section 7 so that the limitation of \$50 per annum for examination of live stock companies, is removed.

The most important amendment of section 7, however, is that indicated by the heavy face type in the following paragraph, as amended:

No insurance corporation, or any officer or director thereof, shall either directly or indirectly pay by way of gift, credit or otherwise, any sum of money or other valuable thing to the superintendent or any clerk or employee of the insurance department or any examiner for extra service or for purpose of legislation, or by way of a loan, or on any other pretense whatsoever.

May Refuse Licenses to Domestic Companies and Fraternal Societies.

An amendment is offered to section 9, authorizing the Superintendent to refuse to issue a certificate "to a domestic or foreign corporation if, in his judgment, such refusal will best promote the interests of the people of the State," and striking out the following sentence:

This section shall not apply to any existing domestic insurance corporations existing on the 1st day of October, 1892, or to fraternal insurance associations organized on the lodge system.

Must Have 50 Per Cent. Paid-In Surplus.

An amendment is offered to section 12, requiring every new insurance company organized in this State with capital stock, to "have a surplus equal to 50 per cent. of its stock, which surplus shall also be for paid-in cash."

Section 13 relating to the deposit

of securities is amended in several respects, but chiefly so as to give the Superintendent the right to require the deposit to be made good if the market values at any time decline below the sum for which they were deposited.

Section 16 is amended in a manner more completely declaring the meaning, but apparently not materially changing it.

Amortization Applies to Life Companies Only Except in Discretion of Superintendent.

Section 18 is amended so that the amortized plan of valuing bonds applies only to those which are "held by any life insurance corporation authorized to do business in this State," but giving discretion to the Superintendent to "require any insurance corporation authorized to do business in this State to value its bonds or other evidences of debt in accordance with the foregoing rule.

Consent of Superintendent Necessary for any Total Reinsurance.

Section 22 is amended so as to extend the requirement that the consent of the Superintendent to reinsurance must be obtained in advance, to "the reinsurance of any domestic insurance company other than a life insurance company." This is in addition to the requirement concerning unearned premium liability which has already been set forth. Section 26 is amended so as to more clearly require the deposits by corporations of other States to be governed as already provided.

Special Deposit Law Changed.

Section 28 in relation to special deposits expunges the requirement in regard to deposits of abstracts of titles, etc., together with bonds and mortgages and adds the requirement that foreign fire companies may be authorized to transact marine insurance upon making an additional deposit of \$200,000.

Companies May Remove Cases to Federal Courts.

Section 30 is amended by striking out the provision against a corporation doing business in New York, applying to remove an action to the United States court.

Amendments as to Examinations and Reports.

Section 39 is amended so as to require the examination of life companies every three years and other companies and societies every five years, and also:

into the affairs of any corporation organized under any law of this State or having an office in this State, or which corporation is engaged in or is

claiming or advertising that it is engaged in organizing or receiving subscriptions for or disposing of stock of, or in any manner aiding or taking part in the formation or business of, an insurance corporation or corporations, or which is holding the capital stock of one or more insurance corporations for the purpose of controlling the management thereof as voting trustee or otherwise.

Section 44 is amended so as to require all the mutual fire companies, assessment societies and fraternal societies to make reports.

Section 46 is amended so that the reports to be printed by the department are to be "as such statements and reports shall be found and corrected by him."

The present sections 47 and 48 in regard to deceptive statements and contents of advertisements are repealed and practically enacted in approved form in a new section 47.

Anti-Discrimination Law for All Branches.

A new section 48 is offered prohibiting rebating and discrimination on the part of other classes of insurance companies as well as fire companies. The language of the provision is very similar to that of the present prohibition of rebating and discrimination on the part of life insurance companies and agents.

Section 49 is amended so as to apply to agents representing New York companies as well as others.

Section 52 is amended so that the making of an examination by the department is optional with the Superintendent when a company is amending its charter under the provisions of this section.

Section 57 is amended so as to bring fraternal societies, co-operative insurance companies, etc., under the provisions of article 1.

Important Amendments to 63 Relating to Fraternal Societies.

Section 63 is amended so that if fraternal societies and corporations for the insurance of domestic animals are found upon examination to be in such condition that they "could not meet the requirements for incorporation specified in such articles respectively" the Superintendent may apply to wind them up. This would apply to a fraternal society if its membership fell below 200, its assets below \$4,000 or its insurance in force below \$400,000. The special paragraph 7 of this section relating to the validation of the taking charge of the Washington Life Insurance Company is repealed and instead a section is added providing that upon the court's ordering liquidation the Superintendent may apply for dissolution of the corporation.

A SOUND AND PROSPEROUS LIFE COMPANY.

The State Life Insurance Company of Indiana reports in its 15th annual statement, just at hand, unassigned surplus of \$1,174,606.34; total assets of \$8,580,930.58, and an increase in surplus of \$314,044.74 during the year, out of the total increase in assets of \$1,201,977.14.

The company carries with the Auditor of the State of Indiana a deposit of securities of the value of \$8,000,000, amounting to more than \$848,861 more than the amount required by law, which is the aggregate amount of the reinsurance reserves of the company.

The management of this representative Western company is especially to be congratulated upon the excellent results of its operation, and particularly upon the large surplus earnings of the year and the very handsome increase in surplus. This means especially handsome returns for policyholders. The increase in surplus is the more noteworthy because of the change of the reserve basis by the State of Indiana, which now charges a much heavier reserve upon new business than was previously the case.

The company offers liberal commissions to agents, with renewal commissions and contracts direct with the company.

The Philadelphia Life Insurance Company

North American Building.
PHILADELPHIA, : PA.

HIGHEST COURT RENDERS IMPORTANT DECISION.

The Supreme Court of the United States, on February 28, handed down a decision in the case of the City of New Orleans vs. New York Life Insurance Company, relative to local taxation, which will be of much interest, by reason of the distinction which it makes as to policy loans made directly by the company.

The entire decision has not yet come to hand, but it is to the effect that loans to policyholders are not subject to local taxation. A similar decision had already been rendered by the United States Circuit Court for the Eastern District of Louisiana, and enjoined the collection of the tax on the ground that these loans were in effect "partial and anticipated settlements," rather than mere loans. There is also involved the technical ground that the company advanced the money from its home office in New York, and that all transactions were through the mails, interest likewise being payable at the home office of the company in New York. It is not known at the present moment on which ground the Supreme Court has upheld the company's contention.

A suit brought by the Metropolitan Life Insurance Company three or four years ago to enjoin a collection of a

tax upon its policy loans, was decided by the Supreme Court against the company. In that case, the loans had been made through an agent in New Orleans, who also collected the interest and to whom the notes themselves were sent for delivery, whenever the policyholders desired to pay up. It was held that under the circumstances the company was liable, the court holding as follows:

"The notes and securities were in Louisiana whenever the business exigencies required them to be there. Their removal with the intent that they shall return whenever needed, their long-continued, though not permanent absence cannot have the effect of releasing them as the representatives of investments in business in the State from its taxing power. The law may well regard the place of their origin to which they intend to return as their true home and leave out of the count temporary absence, however long continued."

On this ground it was there held that the imposition and collection of the tax were not in violation of the 14th amendment to the Constitution.

GRAVEYARD INSURANCE IN MINNEAPOLIS.

Telegraphic reports from Minneapolis, Minn., are to the effect that a

well-organized conspiracy for getting moribund invalids into fraternal insurance societies has been unearthed there, the insurance being procured by false statements as to age and condition of health.

It is said that the Knights and Ladies of Security have 200 certificates in force there which have been thus secured and the Court of Honor about 100.

Among the other societies which are said to be more or less affected are the Independent Order of Foresters, the Ladies of the Maccabees of the World, the Ladies of the Modern Maccabees, the Loyal Mystic Legion, the Modern Brotherhood of America, the Modern Woodmen of America, the Supreme Tribe of Ben Hur, the Woodmen of the World, the Mystic Toilers and the Mystic Workers of the World.

It is said that officers of the local lodges, as well as medical examiners, have taken part in the conspiracy.

At the annual meeting of the stockholders of the Volunteer State Life Insurance Company of Chattanooga, Tenn., the report of Vice-President Craig showed that in the year 1909 the company had increased its net income \$82,788, making a total net increase in assets of \$171,707. The amount of new business written was nearly \$1,000,000.

Perfect Protection Policy

\$10,000, AGE 30, PREMIUM, \$297.30

1. Death Benefits in one Sum, or in any form of annuity.

Contracts direct with producers on maximum commissions and renewals allowed by New York Law.

LIBERTY LIFE INSURANCE COMPANY

111 Broadway, New York City

WM. H. LYNN, President

WILBUR S. TUPPER, Vice-Pres. and Gen. Mgr.

"PERFECT PERSONAL PROTECTION."

Tupper Upon the New Policy of the Liberty Life.

In connection with the new policy of the Liberty Life Insurance Company, supplying life insurance, health insurance and old age annuity all for one premium, Vice-President and General Manager Wilbur S. Tupper has sent out the text of a little brochure, prepared by him, upon the subject of "Personal Protection."

Mr. Tupper's exceedingly clever address upon "The Partial Loss in Life Insurance," delivered before the students of the University of Michigan some years ago, when he was vice-president and general manager of the Conservative Life Insurance Company of Los Angeles, will long be remembered by all who are interested in life insurance. The brochure now at hand is along the same lines, but is at once more elaborate and simpler. The first paragraph sets forth, however, the correct view, previously brought forward by Mr. Tupper, as follows:

"The Partial Loss in Life Insurance."

It will be plain, upon analysis, that all forms of insurance which pertain to human life and indemnify against the loss of its earning power, must be life insurance, and ought to be so classified. Just as death means a total loss of life, so must anything that impairs or interrupts the earning power of life be regarded as a partial or temporary loss of life. Indemnity furnished for this partial or temporary loss (generally termed accident and health insurance) is in reality life insurance, just as certainly as is indemnity for death."

This is followed by a discussion of the manner in which insurance against total loss and insurance against partial loss have developed separately, the separation even extending to parting accident insurance from other forms of disability insurance. This portion of this interesting presentation closes as follows:

Why Should They Be Separated?

With a clear recognition of the partial loss in life insurance, it is unnecessary and often impossible to determine whether the same be due to accident or sickness. The first cause is generally unknown. It may be disease resulting from accident, such as infection following a wound; or it may be accident which would not have occurred, except as some disease made it possible. We may conceive of insurance against any personal happening, wholly regardless of any infraction of health; but this would not be legitimate life insurance of any kind. The important consideration is,—Has there been a partial or temporary loss of life's productive power, regardless of how caused?

Better in Every Way When Together.

There follows mention of the introduction; in the policies of some of the life insurance companies of indemnity against total and permanent disability. This brings Mr. Tupper to his main proposition, as follows:

Perfect personal protection means all forms of personal insurance in one contract. The perfect protection policy provides death benefits in the fullest form; pays disability benefits until age 70, and then provides an old age pension to take care of insured for the rest of life. What other insurance does partially, this does completely. It not only insures; it **assures**.

He proceeds to discuss reasons "why personal insurance should be combined in one contract," which reasons may be enumerated in his own language, as follows:

First. "Disability insurance involves an increasing risk."

Second. "It therefore requires increasing reserves analogous to life insurance."

Third. "The insured should have the right to continue his protection by the payment of premiums; otherwise he may find it terminated when he needs it most."

Fourth. "Why should the insured carry his personal protection in two or three contracts, with as many companies and agents to deal with, when one will suffice?"

Fifth. "A combination policy covering various kinds of personal protection means a saving of cost."

Sixth. "The moral hazard is largely eliminated."

Seventh. "The benefits of medical examination and inspection are had without extra cost."

A Great Saving in Expense Cost.

All of these points are briefly elaborated and illustrated as, for instance, in regard to expense cost:

Nearly half the premium is used, not only the first year, but in succeeding years, for renewing the policy. Combined with life, the renewal commissions could not, under the New York law, exceed $7\frac{1}{2}$ per cent. The disability insurance will renew as a matter of course, the premium being properly a part of the life rate.

The Virtues of the Combination Many and Convincing.

The following may be regarded as the peroration of this extremely persuasive argument.

Life insurance fulfills its mission but partially when it disregards the partial loss of life. Those who most need indemnity in case of death, likewise most need insurance against the temporary loss due to disability. The average insurer is a producer whose family depends upon his current income. To indemnity against a temporary loss of that income is most important. When the bread-winner is

prostrated by typhoid fever, life insurance for total loss only is not an unmixed blessing. Household expenses do not stop when income stops. The rent goes on, and the doctor's bill must be paid. Many a life insurance policy lapses, when it comes to a choice between paying the premium or feeding the children. Neither the "twister" nor the "rebater" is to blame for lapses which come at such a time. The insured in such cases cannot protect others without first protecting himself.

The prudent insurer will welcome a plan that protects himself as well as his family. He knows that the partial loss may come many times; the total loss but once. Moreover the partial loss, occurring as permanent disability, means a greater financial loss than death. Productive power is gone, and the helpless subject involves a greater cost than when in health.

A Most Attractive Combination for Agents to Handle.

Mr. Tupper has had wide experience in the sale of combination policies of this general type. He introduced it in connection with the Conservative Life and afterwards, in connection with the Pacific Mutual Life Insurance Company, while he was president of the latter; and, though no commission was paid upon the extra premium representing the charge for sickness and accident insurance, it was found so attractive an addition to a life policy that nine-tenths of the total business transacted—

which, by the bye, was phenomenally large, likewise, and secured at moderate cost—was upon the combination plan. Experience proved that it was more attractive by far to the agents than any other feature of the company's policies and that it outweighed offers of considerably larger commissions by other companies upon the premiums of policies which did not contain this feature. This phase of the matter is set forth in the closing paragraph of the brochure:

Because it appeals to the prospective applicant, this form of insurance also appeals to the agent. Life insurance, as generally presented, is an old story. But this is a new proposition, and one that appeals to the heart of the average applicant. Many men want something to lighten life's burden **here** and **now**, rather than something to take the place of life altogether. It is a new and attractive contract, and will interest many who will not consider insurance for a death benefit alone. Perfect protection policies are written more easily than those for death benefits only, and there is less competition. The entire contract is made more desirable on account of the weekly indemnity, and it renews better for the same reason.

President Lynn and the Liberty Life are especially to be congratulated upon having secured the services of Mr. Tupper. Under his energetic and enthusiastic management, and with a policy presenting so many, various and unusual attractions, the Liberty Life is likely to make a new record for new business during the coming year, which will forever set at rest all grumblings that new companies cannot be established and be built up under the restrictions of the Armstrong laws.

PRAISE FROM THE HIGH QUARTERS.

In an address of President L. G. Fouse, of the Fidelity Mutual Life Insurance Company, before the legislative commission of Pennsylvania, upon the revision and codification of the revenue laws of the commonwealth, and in answer to a question by the counsel of the commission "What State, in your opinion, has the best insurance laws?" the following answer was returned:

"I would say that New York, since its laws were amended and changed, is about as near right as any. There all companies pay a 1 per cent. tax and all are treated alike."

President Fouse was presenting an argument against the present method of taxing life insurance companies in the State of Pennsylvania, which exhibits the following peculiarities:

Stock companies are taxed five per cent. on their capital stock, while mutual companies are taxed .004 on their investments, which in the case of a company like the Penn Mutual Life Insurance Company, runs up to a very heavy aggregate.

Pennsylvania companies are taxed .008 on their premiums.

Companies of other States are required to pay a tax of 2 per cent. upon their premiums.

Of course, one result of this discrimination is that in all States where there is a so-called reciprocity law—it would better be named a retaliation law—the Pennsylvania companies are taxed at the maximum rate demanded in Pennsylvania of out-of-the-State companies.

The program recommended by President Fouse, who was speaking not only for his own company, but on behalf of the National Association of Life Insurance Presidents, was that Pennsylvania should adopt the same provision as in New York. He expressed the opinion that there would be no appreciable loss in revenue if this were done.

MILLAR ELECTED PRESIDENT.

Over one hundred members and guests attended the twenty-third annual banquet of the Life Underwriters Association of New York, which was held at the Hotel Plaza on February 24.

C. V. Dykeman served as toastmaster. William H. Hotchkiss, Superintendent of the New York Insur-

ance Department, was a guest of honor.

Mr. Hotchkiss expressed his confidence in agents' organizations, and, naturally, paid a tribute to the Insurance Department of which he is head.

However, by far the most interesting address of the evening was that of Vice-President D. F. Appel, of the New England Mutual. He furnished much meat for solid thought in his review of the last four years.

William J. Tully, general counsel of the Metropolitan Life, next spoke, giving particulars of insurance legislation last year.

Rev. George R. Van de Water spoke enthusiastically of the life agent's future.

Hugh G. Millar, junior member of the firm of Goulden & Millar, managers for the Connecticut General Life, was elected president. The other officers elected were as follows:

W. T. Diefendorf, first vice-president; William McElligott, second vice-president; Edward W. Allen, third vice-president; F. C. Stanland, secretary; C. A. Wardle, treasurer. Executive committee—C. V. Dykeman, chairman; J. S. Myrick, W. C. Johnson, Edward W. Lee and G. H. Linsz.

At a special meeting of the directors of the Continental Insurance Company, held last Friday, it was voted to make a stock dividend of 100 per cent. It is rather interesting to know that this action was taken, subject, of course, to the approval of the stockholders. They have been called together for a special meeting on March 18.

GEORGE T. DEXTER

2nd Vice-President

34 Nassau Street

New York, N. Y.

STATE'S RIGHTS IN THE DOMINION OF CANADA.

The National Supervision Question Much Mixed, Up There.

They are having their own troubles in Canada, as well as in the United States, in relation to national supervision of life insurance. It was supposed that the difficulties had been virtually entirely surmounted, since for a number of years there has been established at Ottawa in the department of the Minister of Finance, an insurance department with a superintendent in charge, and since the reports made by the superintendent are everywhere recognized as authoritative as to the condition of insurance companies, reporting to it. Neither all Canadian companies nor all other companies doing business in Canada so report, however.

At the outset, when the Dominion took the step of establishing such a department, there was much grumbling, especially in the Province of Ontario, which had a department of its own, and in which the principal insurance companies were then, as now, located. This protest was aggravated, likewise, by the fact that Ontario remained conservative in politics, while the Dominion went liberal, but in spite of the acerbity which prevailed for a time, the influences of the insurance companies of Ontario, which found themselves more comfortably situated under supervision extending throughout Canada than under the system of separate provincial regulation which was already beginning to harass them, and of the inconveniences of which several of them have had almost continuous reminders while doing business in the United States was soon cast in favor of the Dominion or National system. In consequence, the opposition in Ontario came to nothing although the Ontario department was kept up and ever ready for business.

The Effect of Dominion and of Provincial Charters.

The practice, likewise, grew up, of taking out dominion charters which, was held at the Hotel Plaza on the of course, brought companies directly under the supervision of the Dominion since Parliament certainly can regulate institutions which it has itself chartered.

The precise effect of a dominion charter, however, has perhaps not yet been adjudicated, especially with regard to whether or not it gives the right to do business throughout Canada, even against the provisions of the laws of a particular province.

It has scarcely been an open question from the very beginning that a

particular province may charter its own companies, and permit them to do business without regard to dominion statutes, nor even that a province may permit a company from another province or even from another country to do business, even though the same be not licensed under the dominion regulations. Repeatedly such permission has been granted; and, while the right in the second matter has been challenged by the Insurance Department at Ottawa, there has been no earnest or effectual interference, and it is probable that the contention on the part of the department rather reflects what it desires than what it believes to be the law at the present time.

Effect of Justice Leet's Decision.

In any event, the decision of Mr. Justice Leet, of the Province of Quebec, in *King vs. Willis, Faber & Co.*, reported fully in "The Chronicle" some three months ago, has thrown things into chaos in the Dominion, so far as the assertion or exercise of authority on the part of the Dominion over insurance matters throughout all the provinces is concerned. That decision, it will be remembered, was to the effect that the regulation of insurance is not contemplated by the British North America Act, establishing the Dominion, and that, therefore, this entire subject is relegated to the provinces which alone have authority over it. This opinion went much further than any previous judicial pronouncement upon the subject and seemed to cover the entire field of attempted supervision, as well as the mere question as to whether or not a province has the right to admit a company from another province or country, which has not been licensed by the Dominion.

Announcement by the Administration.

The effect of the decision upon the legislative conditions in Canada may be gathered from the following colloquy which recently took place in the Dominion Parliament at Ottawa:

Mr. Monk.—Is it the intention of the Government to refer the insurance bill which is now being considered by the Senate to the Supreme Court in order to obtain a decision as to its constitutionality? There was a rumor to that effect when a judgment was rendered by Mr. Justice Leet at Montreal a couple of months ago in the case of *King vs. Willis, Faber & Co.*, to the effect that that legislation was unconstitutional. It seems that it would be an advantage to find out the opinion of the highest court on that subject before we go more fully into the study of the proposed act.

Hon. A. B. Aylsworth (Minister of Justice).—Mr. Speaker, the interesting question to which the honorable member has called your attention is but one phase of a larger question as to the powers respectively of the Dominion Parliament and of the local

Legislatures in regard to the incorporation of companies. That question was not long since raised for the decision of the Supreme Court, and the members of that court differed among themselves very decidedly in the opinions they expressed. The question being of such large practical importance, communication was had from the department of which I am in charge with the Attorneys General of the various provinces with a view to arriving, if possible, at some means by which these difficult and very weighty questions of the construction of the British North America act may be definitely settled. That correspondence has resulted in a proposition from several of the provinces that a conference on the subject be had between representatives of the provinces and representatives of the Dominion Government and such a conference is being arranged for. Communications are now being addressed to the various Lieutenant Governors of the different provinces proposing a meeting of representatives of the provinces and of the Dominion Government to discuss the whole subject, not merely the question of the insurance legislation but the larger one as to the right to incorporate companies in the provinces and in the Dominion respectively.

The bill referred to in this interrogation and announcement—for the statement by the Minister of Justice must be taken as an announcement by the existing government or administration—is a very much revised version of the insurance bill, recommended by the Royal Commission on Life Insur-

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.4

Contingency Reserve . \$9,207,276.3
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

ance which rendered its report in 1907. In its most recent form, so far as life insurance is concerned, it is understood to have been reasonably satisfactory to the companies and in some respects, as it appeared to "The Chronicle," seriously emasculated, and likely to be of little value if enacted. Additional features relating to fire insurance have recently been strenuously objected to by Canadian property-owners, who do not relish the idea of being deprived of a considerable portion of the fire insurance facilities now afforded, by reason of the proposed requirement that insurance could not be taken in non-admitted companies except under certain regulations with which most of these companies would not have been likely to comply.

What Will Likely Result From the Conference?

The proposed conferences "between representatives of the provinces and representatives of the Dominion Government" are likely to be between the Minister of Justice and the Attorney Generals of the various provinces. It is said, however, that such conferences will come to nothing if the only way in which they could carry into effect the desires of the government is by consenting to an amendment to the North America act, extending the powers of the Dominion as desired. At the present time, there is no disposition, it is reported, on the part of Ontario—although such a disposition might for partisan reasons be fanned into a flame at any moment—to insist upon the separate department idea and non-interference; but, on the other hand, in the Western provinces there has grown up a very strong sentiment in favor of home rule, not only as regards insurance but in many other matters, and it is not regarded probable that these provinces will consent to an amendment to the North America Act which will increase the powers of the Dominion and limit the scope of provincial authority over insurance companies and other institutions doing business within their borders. Instead, there is a strong disposition to take the contrary stand, and this, it is said, is without regard to political lines.

Politics Might Get Into It.

Since the matter is not already one of political contention, doubtless the existing government will, in view of of the sentiments here referred to, deem it the part of wisdom to avoid permitting it to drift into a political issue. Undoubtedly, if it were to do this, the party out of power would be greatly the gainer by taking the

position, which could easily be taken on one ground or another, against the pretensions and centralizing tendencies of the party in power. This will perhaps be a natural thing for a conservative party to do, in any event, and conditions in Canada apparently might easily drift into one, somewhat similar to that which long existed in the United States, viz.: a division of the principal political parties along the line of strict or liberal construction of the constitution, which, as regards the Dominion of Canada, is the British North America Act, such construction, likewise, bearing strictly upon the relative powers of the Dominion and of the provinces and involving questions entirely analogous to our long disputed question of State rights.

Might Supervision Be Abandoned for Publicity?

It is an interesting subject for speculation, if, as appears probable in the United States, the present conditions in Canada will not lead away from supervision altogether into publicity. If there should be such a deadlock that the Dominion will have to keep hands off, so far as regulating insurance is concerned, it might not be an unmixed evil. Already the publicity feature of the Dominion's supervision over insurance is by far its most valuable feature; and, if it transpires that, except as to companies actually chartered by the Dominion Parliament, there is no power of supervision and even as to them no actual power of regulation or of compelling their admission to the respective provinces to do business, it may easily happen that the entire attention of the Dominion Parliament will be given to efficient publicity.

Room for Improvement in Publicity Requirements.

At the present time, precisely as in the United States the publicity requirements of the Dominion laws and of the rules of the Dominion department are deficient. Indeed, Canada is much behind the United States as regards publicity, especially in relation to life insurance. No such requirements, for instance, as are now enforced in nearly every State of the United States in regard to publication of scales of dividends, of gain and loss exhibits and the like are to be found, either in the laws of Canada or the rules of the Canadian department. Much less are standards set up for comparing relative economy in cost of new business or in general expenses. That there is also strenuous opposition to such, by the companies which would be most benefitted, is clear from the fact that most of the

publicity provisions recommended by the commission have been opposed so doggedly that they are not in the bill. The gain and loss exhibit is the last to go—since Mr. Aylesworth's announcement, indeed.

The matter of this requirement, however, was thereby consciously and avowedly referred to the Insurance Department, with power, thus increasing its responsibilities. Undoubtedly, if the department were given an absolutely free hand in the matter of publicity, and had no means of making itself effectual in regulating insurance except by means of publicity, there would be a strong disposition to render that publicity more searching and significant. In the long run, this could not fail of powerfully influencing the conduct of insurance throughout the Dominion, and perhaps so powerfully as to render the interferences and annoyances of supervision obviously fruitless and unnecessary, and thereby to pave the way for their disappearance.

IN NEW ENGLAND

MASSACHUSETTS FIRE & MARINE INSURANCE CO. ORGANIZES.

What may portend a revival of the old glories of Boston, when Boston was a "company town" with some twenty-odd fire insurance companies making their headquarters there, came to pass Monday afternoon when the Massachusetts Fire & Marine Insurance Company, which is to start with \$500,000 capital and an equal amount of surplus, was organized. The enterprise is distinctly a local one in its backing and has interested some of the most substantial citizens of Boston as officers and stockholders. The choice of officers resulted as follows: Colonel Everett C. Benton (of John C. Paige & Co.), president; James J. Storrow (of Lee, Higginson & Co.), vice-president; Frank E. Buxton (treasurer North End Savings Bank), secretary. The latter appointment is a temporary one, as the permanent secretary is to be the underwriter of the company. The board of directors comprises E. C. Benton, Guy A. Ham (prominent lawyer), J. J. Storrow, Lucius Tuttle (president Boston & Maine Railroad), Bernard J. Rothwell (president Boston Chamber of Commerce), George E. Smith (chairman Harbor and Land Commission), E. F. McKnight and W. G. Shillaber (president North End Savings Bank). There has been a big demand for participation in the underwriting of the company, but in order to make such participation as general as possible the allotments have been limited in amount. It is expected that the company will be ready to start in business in a few months, and beginning with nearby States gradually branch out as an agency company, in the wider sense. It will be a "board" company and is to be conducted in accordance with the best traditions of the business.

Peace Restored.

As forecasted in a previous issue of this paper, the Massachusetts Burglary Underwriters Association was organized at Boston last week, and comprises all the companies writing burglary insurance in the State, namely: Massachusetts Bonding, Maryland Casualty, Employers Liability, National Surety, Fidelity & Casualty, New Amsterdam Casualty, American Bonding, United Surety and United States Fidelity & Guaranty. The aims of the association are for the betterment of the conditions of the business, and that a start has been made in the right direction, is evidenced by the fact that the rates in effect prior to the late "war," have been restored, becoming

operative on all new business since Tuesday last, and, on renewals, from April 1, prox. The election of officers resulted in the choice of Mr. O'Neill (of the United States Fidelity & Guaranty) as chairman, Mr. Johnson (of the Massachusetts Bonding) as vice-chairman, and Mr. Woods (of the New Amsterdam) as secretary.

New Firm at Boston.

A new insurance brokerage firm, which went into effect on March 1, has been organized at Boston. It is styled "Warren, Meade & Gale," and is composed of Calvin E. Warren, hitherto associated with the Union Central Life; John Paulding Meade, manager for Eastern Massachusetts of the American Fidelity, and Dr. A. Ernest Gale. The headquarters are at 99 Milk street, Boston, from which Mr. Meade continues the management of the American Fidelity for territory radiating from Boston.

New England Brevities.

The fellows who made that \$21,000 haul from a Washington street jewelry store between Saturday evening and Monday morning were not even considerate enough to await the restoration of burglary insurance rates which went into effect on March 1.

The big Sunday fire on Lewis Wharf, Boston, with \$150,000 loss, might have been worse, had it not been for the splendid work of the fire department, and notably of the two fire boats. Chief Mullen says that the new fire boat, engine 47, more than paid for itself on this occasion. The towing out into the stream of the Clyde liner Onondaga, with a valuable cargo, alone saved more than that.

With the wharf fire at Boston, the \$385,000 cotton fire at New Bedford, the \$10,000 hotel fire at Ashland, N. H., the \$30,000 church fire at Burlington, Vt., and the \$30,000 church fire at Whitinsville, Mass., the \$20,000 potato warehouse fire at Island Falls, Me., a big hole has been burned in New England fire premiums during the past few days.

"The Chronicle" is able to state on the best of authority that upon Alfred M. Bullard, for many years the successful Boston agent of the Phenix, will be conferred the Boston representation of the Fidelity-Phenix when the amalgamation of the two companies is perfected.

It is the general impression of the Boston "street" that William A. Muller, the deservedly popular representative of the Fidelity Fire, will be entrusted with the representation of the Fidelity underwriters at the due time.

Boston Fire Premiums.

Boston fire premium receipts, as shown by the returns of the protective department, aggregated \$2,079,960 during the second half of last year, and, added to the total of the first half, make the receipts for the entire year \$4,386,023. This was over \$202,000 more than the receipts of 1908, and the gain was mostly in the second half of 1909, which was nearly \$107,000 ahead of the corresponding period in 1908. The companies whose receipts during the half year lately ended were \$10,000 and over are listed below:

	Second Half 1909	Second Half 1908

TO REDUCE FIRE WASTE.

At the annual meeting of the Ohio State Fire Prevention Association, which was held at Columbus on Tuesday last, Franklin H. Wentworth, of Boston, secretary of the National Fire Protection Association, was the principal speaker of the evening.

Mr. Wentworth reviewed the progress of the National Association, and pointed to the valuable standards worked out during its fourteen years of experience. He said, in part:

The people, impoverished by the stupendous national fire waste of more than \$200,000,000 per year, and ignorant of the economic facts in connection with it, are already seeking relief in the direction of reactionary legislation that will serve only to impose additional burdens upon them. Complicated by the increasing cost of living, and other kindred problems that are disturbing the temper of the masses, the clearest sort of provision is imperative if our educational efforts are not to be lost in hopeless economic confusion. We can help to relieve the economic burden by stopping a monstrous leak; but we can render this great service only by the help of the people themselves. They must be shown; and they must be shown quickly that they themselves are bearing this burden, and that only increased vigilance and an immediate reformation in their habits of building and handling of fire can relieve them of this frightful fire tax, which is crippling all our social and economic progress, and which must inevitably carry us to the rear of those nations which are so vastly our superiors in prudence.

In this imperative work of public education it is not difficult to see how admirable a complement the State body may be to the National body. Where we are now dependent upon individual members in the various States to introduce our standards or for effort to eliminate some glaring fire hazard, the entire membership and influence of the State associations might be concentrated upon it. With our stores of statistics and engineering research flowing out to the people of all the States through the State associations as arteries, the problem of greatest moment—how quickly to reach the masses—will be solved. Conversely the influence and usefulness of both State and National bodies can be vastly multiplied by the gathering of statistics and information on important matters by each State, to be tabulated by the national body and distributed back to the State bodies for their common guidance and purposes of comparison.

There are thousands of towns and cities of America that never saw a building code. Most of these are following obsolete and hazardous methods of building, simply because we have been unable to reach them with suitable standards. A series of codes calculated to the varying sizes of the cities is imperative. I believe it is useless to hope that the small cities will take out present national building code and make suitable abridgments of it. This must be done for them, and when it is done for one it will

be done for all of the same class in every State. We can never hope to cope with the inflammable conflagration-breeding shingle roof in any other way. We must have suitable laws in every city governing the storage of oils and explosives. This alone is a four or five years' work we should get at immediately. The problem of the fire-bug, the problem of a fire marshall's office in all the States; these and a dozen other vital questions only await a complete and responsive organization of the fire prevention forces, operating through a central clearing house that their efforts may be cumulatively effective.

THE CITIZEN'S EASTERN DEPARTMENT.

On or about April 1, the Citizens Insurance Company, of Missouri, will establish an Eastern department in the general offices of the Hartford Fire Insurance Company, at Hartford, Conn. Secretary Thomas H. Scotland will have complete charge of the Eastern department, which covers the States of New England, New York, New Jersey, Pennsylvania, Maryland, West Virginia, Delaware and the District of Columbia.

Mr. Scotland will take the title of general agent for the Citizens, and it is reported that he will also become the superintendent of agencies for a portion of the territory mentioned above for the Hartford.

The Missouri Insurance Department, which recently examined the Citizens, has given the company a clean bill of health, and complimented the management in many particulars. The new arrangement will prove a great convenience to the agents of the company, and should result in a large increase of business.

FIRE INSURANCE EXCHANGE.

The committee changes in the New York Fire Insurance Exchange result in their being made up as follows:

Arbitration Committee.

Member.	Office Represented.
A. H. Wray, Ch'm'n	Commercial Union.
W. B. Ward,	Ward & Crawford.
C. W. Sparks,	London Assurance.
A. E. Miller,	A. E. Miller.
A. H. Crum,	North River.
J. H. Kelly,	Westchester Fire.
J. W. Nichols,	Queen Ins. Co.

Brokerage Committee.

G. Scott, Chairman	J. M. Talbot & Co.
Lyman Candee,	Globe & Rutgers.
M. J. Ennis,	Peter Cooper.
W. D. Sammis,	W. D. Sammis & Co.
C. A. Garthwaite,	Stuyvesant Ins. Co.
T. A. Ralston,	Northern Assur. Co.
W. M. Morris,	Aachen & Munich.

Executive Committee.

F. A. Pawley, Ch'n	F. A. Pawley.
F. H. Way,	Williamsburgh City.
Geo. C. Howe,	Niagara Falls.
Chas. A. Norris,	United States Fire.
Wallace Reid,	Wallace Reid.
E. E. Pearce,	London & Lancashire
D. M. Darby,	Caledonian.

Rate Committee.

E. E. Cain, Ch'm'n	Hanover Fire.
G. W. Montgomery,	Montgo'y & Fountain
W. B. Ogden, Jr.,	W. B. Ogden & Son.
E. F. Schleyer,	Norwich Union.
Otto Dellevie,	Phoenix Assur. Co.
H. J. Ferris,	Home Insurance Co.
James Marshall,	Northern Insur. Co.

ON THE WARPATH.

Attorney General Bingham, of Indiana, who is attempting to put to an end the use of schedules and uniform rates in that State, last week asked an order of court requiring the fire insurance companies to produce all books, papers, records and correspondence with the field men's organizations and rating bureaus since 1896.

TO BE OR NOT TO BE.

As the days go by and no other non-union fire insurance companies follow the Continental into the Western Union, the prospects of large accessions to the union membership grow slim. It is by no means certain that there will not be such accessions, for some strong forces are still at work in that direction, but the spirit of co-operation does not appear so strong as was expected.

The sentiment in favor of unionizing seems to be stronger in the East than in the West. For example, it is well known in Chicago that when President Hoadley, of the American, was in that city a couple of weeks ago, he was in favor of his company's entering the union. Vice-President Sheldon, who is in charge of the company's Western field, is opposed to such a move. Mr. Sheldon went East last week to settle the question at the home office. There are said to be other Eastern executives who look with favor upon going into the union, but the Western managers, who are already doing a satisfactory and profitable business and who know what an amount of labor and breaking of established connections would be incurred by unionizing, take a different view.

The receptive attitude of the Eastern companies can be fairly illustrated by the following statement by President Amonson, of the Peoples National Fire:

Every underwriter acquainted with the Western situation recognizes the invaluable service rendered by the union to the underwriting fraternity, and personally I would like very much, indeed, to see the Peoples National, as well as the other non-union companies affiliated with that organization; but unless a reasonable number of companies would decide and enter, it would not be possible for the Peoples National to act alone.

On my recent visit to Chicago I interviewed many of the non-union managers, and with a single exception they all expressed themselves as favorable to going in to the union, but they all desired to have the honor of being last.

Unless a greater degree of courage is shown by the Western managers in taking advantage of the present opportunity, there is little prospect of anything being accomplished immediately.

Many reasons are advanced for not unionizing. Some managers would much like to do so, are not in a strong enough position to go it alone. They appreciate fully that their companies have not places near enough the top of their agencies to enable them to swing the agencies into the union column. They would have to go through much of the same work

of reorganizing the field as would have been imposed upon them had they unionized a year ago. The Continental's changing would help some, but not much. If three or four more leading companies would unionize, they would jump at the chance of being members of the party.

There is one important non-union company whose grounds for staying outside are largely humanitarian. It is doing a satisfactory business. Many of its present agents stayed with it to their own temporary disadvantage when the main clearances were made ten years ago. Its manager does not feel that it would be treating these men right to make them go through separation again.

Hate and Prejudice.

There are others who are kept out very largely by prejudice. At heart they are in favor of co-operation. They adhere to good practices and unionization would scarcely mean any change in their commissions, but they cannot bring themselves to join the Western Union. They even hate the name of the big organization. One of these managers, who has talked of a new organization for years past, still talks of it, although, by his own admissions, he is satisfied that it is impossible to get a number of the non-union managers to agree to anything, except to do as they please.

Another stumbling block is the want of faith non-union managers have in union promises, a distrust born of experience. Once upon a time a number of non-union companies did join the union on a promise that the excepted cities would be taken up and the abuses in them abated. The promise was not kept and a number of those companies afterwards withdrew. The excepted cities are in just as bad shape as ever, and that broken promise is not forgotten.

Waiting and Watching.

Here and there in union managerial ranks is found a man who does not appear to care whether the non-union companies come in at present or not. One such expresses the belief that the States are going to force the companies into co-operation eventually and the worse the present abuses are the sooner the States will be forced into action. He says the fire insurance companies have got to be whipped and kicked until they are driven to bay and forced to show their united power. Anybody knows that theoretically the fire insurance companies could force the repeal of any seriously obnoxious law, if they would co-operate. Even with partial co-operation they made the business interests of

Arkansas compel the Legislature to amend the notorious King law. Practically all the companies of standing pulled out of the State, but some partially spoiled the effect by reinsuring for little admitted companies or writing Arkansas business from the outside.

Another Phase of State Control.

The manager in question believes that the States are going to take control of the commission question and that by so doing they will put out of business a number of companies whose main bid for business is based on excess commissions. At least the effect will be to drive such companies into smaller territory near home and into the large cities where their capital really is needed. Then he looks for more rate regulation laws and other enactments that eventually will drive the companies into a corner and make them show their teeth in self-defense, force them to co-operate or be ruined.

If the companies ever reach that stage, such abominations as the Iowa anti-compact law and the anti-co-insurance law of the same State and the laws which resulted from bills introduced to be bought off, the excessive taxation of such States as Ohio and others of like ilk will be brushed away like frost before a hot wind. It will be a case of reasonable laws or no insurance, and the last alternative would get the commercial community in action in a week.

Men holding such views can be complacent if the non-union companies do not join the union. They think their staying out will only hasten the day of the legislative clean-up of the business and then the business clean-up of legislation.

C. E. Wheeler, recently manager of the Tennessee Inspection Bureau, has been appointed Kentucky State agent for the Hartford Fire.

MAKING FIRE RATES IN KANSAS.

At last Superintendent Barnes, of Kansas, has gotten around to the reduction of rates on preferred business. Had he begun there last summer instead of with the mercantile classes, he probably would not have raised the storm he did. That is where many managers thought he ought to begin. His reduction in rates on dwellings is not unreasonable, although it amounts to about 14 per cent. on the average. His new rate on brick dwellings with hard roofs in waterworks towns of the first and second classes is 20 cents per annum, with the usual discounts for term rates. That would be 60 cents for five years, which is still from $33\frac{1}{3}$ to 50 per cent. above the rates in some large Eastern cities, where competition and custom alone have made the rate.

In putting off action on preferred rates Mr. Barnes may have proved himself a good master of political strategy. When the tariff rates became effective last summer, the first howl came from the merchants in cities, who had been enjoying cut rates. Mr. Barnes promptly gave them relief. Whether they were entitled to it or not is another question, but they got it and it quieted them to a great extent. Had they not been appeased they would have brought enough pressure either to knock out the law or Barnes.

Neither of these results would have suited Mr. Barnes. He does not want to lose his political head, and, as he doubtless believes in the Kansas law, he wants that given at least a fair trial.

Populace and Politics.

Then he took up other less pressing classes. Now in his annual report he is in position to show the people of Kansas where they are paying about half a million less in premiums than they were before, which tends to make the superintendent and the law solid with the populace.

After the reduction in rates on mercantile risks the companies could continue to write them at no profit or even at a slight loss, if they could get a good volume of preferred business. With some of the fat fried out of the preferred business, it puts it up squarely to the companies to write at the prevailing rates or quit the field, for there probably is no very profitable class left.

Now the companies have begun their contest of the Kansas rating law. The action was delayed somewhat because it was hard to find any company that would be "it" in acting as the peti-

tioner. The German Alliance was finally secured and has prayed for an injunction to prevent the Insurance Superintendent or any other officer from enforcing the rate regulation law. As no temporary injunction has been asked it may be months before the case comes up for hearing.

TO DISSOLVE TWO MUTUALS.

Suits have been filed by the Insurance Department of Pennsylvania against two mutual fire insurance companies of Philadelphia requiring them to show cause why they should not be dissolved.

There is very little likelihood that the department's suits will be contested, for the Kensington Mutual Fire Insurance Company has assets of only \$1,393 and liabilities of \$3,602, and the Reserve Mutual Fire has assets of \$2,285 and liabilities of \$8,000.

Charles E. Collins, a broker, at 119 South Fourth street, is secretary of both companies. They have been doing business for about six years.

GREATER NEW YORK PREMIUMS.

The premium receipts of the fire insurance companies for the last six months of 1909, for Greater New York, as shown by statements issued last week by A. M. Thorburn, treasurer of the New York Board of Fire Underwriters, and Henry Blatchford, treasurer of the Fire Insurance Salvage Corps of Brooklyn, are as follows.

New York City Companies—New York, \$2,417,711; Brooklyn, \$775,006.

Foreign Insurance Companies—New York, \$2,327,575; Brooklyn, \$584,560.

New York and Other States—New York City, \$3,242,728; Brooklyn, \$894,222.

The New York board has assessed the companies \$81,184, or 100 cents for each \$100 of premium receipts for the expenses to July 1, 1910, of the

fire patrol and 25 cents for each \$100, or a total of \$20,296 for general expenses for the same period.

The assessment for the support of the Brooklyn Salvage Corps for the current six months is \$1.50 for each \$100 of premium receipts, or \$33,806.82.

The German-American Insurance Company of Pittsburg has been licensed to do business in New York. Wilden & Hancock have been appointed Metropolitan managers. The company has a capital of \$200,000, and a net surplus of \$260,000.

ADDRESS, AGENCY DEPARTMENT,

The Empire State Surety Co.
NEW YORK

WHEN STONE COMES.

When John T. Stone and his Maryland Casualty Company gets real busy in the surety field, which is now proposed, the stiff-necks will have to take notice, because he is no laggard in any event.

"The Chronicle" has for several years known that the event was practically inevitable because of the crossing of interests that provoke friction. It has long been a matter of open comment as to the mixing of Baltimore capital in its competitive insurance concerns. When Warfield organized a banking and trust company with surety and guarantee powers the bonding business was developing rapidly and quickly that division of their work overshadowed everything else, resulting finally in abandonment of the banking and trust feature entirely. The profitableness of the business, however, had put a bee in a lot of bonnets and other concerns sprung up, composed practically of certain financial interests originally interested by Warfield. The American Bonding was one of them, and John T. Stone, who had had some experience with Warfield, was its secretary for some years, but things moved too slowly for the live wire and he quit and, with the same financial interests, organized his Maryland Casualty Company and went in for other than surety lines. Then Bland happened by with his company and started in for burglary business—necessitated by his bank fidelity bonds. Then Mr. Stone threatened to go in for fidelity and surety business, and, as a result, a truce was called and this held for quite a while. But recently the breach has been reopened and widened, and now Stone is red-eyed and is going after scalps.

This tends to prove that the multiple line company is the company of the future. No one line can longer be made profitable by a new company because of the inter-relation of the several and the reduced cost of securing business.

CHICAGO'S AWFUL BURGLARY CONDITION.

Last week in Chicago burglary insurance men got the "situation" there whipped into line apparently. Scarcely had the results been reported to the home offices until there was complaint that the Chicago people had not followed the lines laid down by the Burglary Insurance Underwriters Association. It is understood that one or two companies even went so far as to instruct their Chicago representatives not to go into the new agreement. That is probably not final, however.

What the New York bunch don't know about Chicago would fill several large volumes. A Chicago man (not an executive) who knows a considerable number of the managers of burglary departments, says there are only about two of them that understand the Chicago situation. It looks that way. The Chicago men put a proposition up to the Eastern contingent several months ago, but the Eastern people could not get the companies to agree to anything. The result was the commission war. Then the Eastern people came back with a proposition, not as good by several degrees as the one the Chicago men adopted. It is very much to be hoped that the Eastern people will let the men on the ground handle this matter now. It has taken a lot of compromising and work to bring about this agreement, and it probably is the best that can be secured under the circumstances.

The situation in New York is unchanged from that reported by "The Chronicle" last week. The irreconcilable interests of the burglary writing companies and those which do not write the line is apparently permanent. The situation is still further complicated by the new companies entering, of which there will be at least five this year.

Amendments to Sections 96 and 97.

The following is the text of the amendments to section 96, limiting the new business of life companies, and section 97, limiting expenses:

Section 96. Limitation of new business. No life insurance corporation[, except a corporation more than one-half the outstanding insurance of which on December 31, 1905, consisted of industrial insurance,] shall issue in any year new policies for a larger amount in the aggregate than as follows, to wit: If the total amount of the insurance by said corporation in force on the 31st day of December of the preceding year, including only policies upon which the first premiums have actually been received, is in excess of \$50,000,000, the amount of new insurance which may be issued shall be determined by the following percentages of said insurance in force, to wit: If said insurance in force is more than \$50,000,000 and less than \$100,000,000, not more than 30 per centum thereof; if more than \$100,000,000 and less than \$300,000,000, not more than 25 per centum thereof; if more than \$300,000,000 but less than \$600,000,000, not more than 20 per centum thereof; if more than \$600,000,000 but less than \$1,000,000,000, not more than 15 per centum thereof; and if said amount of insurance in force shall be in excess of \$1,000,000,000, not more than 15 per centum thereof; provided, however, that in the case of any corporation excepted as aforesaid the policies issued in any year, excluding industrial policies, shall not exceed in amount 50 per centum of the total amount of the outstanding insurance on the 31st day of December in the year next preceding, including only policies other than industrial policies upon which first premiums have been actually received, nor in any event more than the amount of \$150,000,000; provided, however, that, in determining the aggregate of new policies issued by any such insurance corporation in any year, there shall be excluded all industrial policies on the weekly payment plan issued in such year. In case any foreign life insurance corporation authorized to do business in this State shall in any year issue new policies for a larger amount in the aggregate

than it could have issued had it been a domestic life insurance corporation, the Superintendent of Insurance shall either cancel or refuse to renew the certificate of authority to do business in this State of any such foreign corporation.

Section 3. Section 97 of said chapter is hereby amended to read as follows:

Section 97. No domestic life insurance corporation shall in any calendar year, after the year 1906, expend or become liable for, including any and all amounts which any person, firm or corporation is permitted to expend [for or permit any person, firm or corporation to expend] on its behalf or under any agreement with it (1) for commissions on first year's premiums, (2) for compensation, not paid by commission, for services in obtaining new insurance exclusive of salaries paid in good faith for agency supervision either at the home office or at branch offices, (3) for medical examinations and inspections of proposed risks, and (4) for advances to agents, [an] a total amount exceeding in the aggregate the [total] loadings upon [the] all premiums for the first year of insurance received in said calendar year (calculated on the basis of the American experience table of mortality with interest at the rate of $3\frac{1}{2}$ per centum per annum) and the present values of the assumed mortality gains for the first five years of insurance on [the] policies in force at the end of said calendar year on which the first premium, or instalment thereof, has been received during said calendar year, as ascertained by the select and ultimate method of valuation as provided in section 84 of this chapter[.], not exceeding, however, in any case the excess of the net premium over one-half vxq, according to the American experience table of mortality, with interest at the rate of $3\frac{1}{2}$ per centum per annum, or as many twelfths thereof as the insurance was months in force. No such corporation shall make or incur any expense or permit any expense to be made or incurred upon its behalf or under any agreement with it, except actual investment expenses (not exceeding one-fourth of one per centum of the mean invested assets) and also except

taxes on real estate and other outlays exclusively in connection with real estate, in excess of the aggregate amount of the actual loadings upon premiums received in said year calculated according to the standards adopted by the company under section 84 of this chapter, and the present values of the assumed mortality gains hereinbefore mentioned. No such corporation, nor any person, firm or corporation on its behalf or under any agreement with it shall pay or allow to any agent, broker or other person, firm or corporation for procuring an application for life insurance, for collecting any premium thereon or for any other service performed in connection therewith any compensation other than that which has been determined in advance. All bonuses, prizes and rewards, and all increased or additional commissions or compensation of any sort based upon the volume of any new or renewed business or the aggregate of policies written or paid for, are prohibited. No such corporation shall pay commissions upon renewal premiums received upon policies issued after the year 1906, in excess of 5 per centum of the premium annually for fourteen years after the first year of insurance in the case of endowment policies providing for less than twenty annual premiums, nor in excess of seven and one-half per centum of the premium annually for the first nine years and 5 per centum of the premium annually for the next five years in the case of other forms of policies; provided that an amount found to be equivalent to the aggregate amount so payable [upon a fair commutation] by a calculation approved by the Superintendent of Insurance and based upon mortality, interest and lapse rates, may be distributed through three or more years, or through a period exceeding fourteen years, but not more than two-fifths of such amount shall be payable for any one year; provided further that in any agency district subject to the supervision of a local salaried representative the renewal commission payable to agents of such district shall not exceed two-thirds of the foregoing rates annually for fourteen years, subject to [commutation] the calculation as aforesaid; provided further that any such corporation may condition

the allowance or payment in whole or in part of any of the renewal commissions allowed to be paid as aforesaid upon the efficiency of service of the agent receiving the same or upon the amount and quality of the business renewed under his supervision; and also provided that a fee not exceeding 3 per centum may be paid for the collection of premiums which shall be received for any year after the fifteenth year of insurance. **If any such corporation shall compensate its agents, or any of them, after the first insurance year, in whole or in part, upon any other plan than commissions and collection fees, the aggregate sum so paid shall in no year exceed the limitations herein imposed and the schedule and plan of such compensation shall be submitted to and approved by the Superintendent of Insurance.** No such corporation, nor any person, firm or corporation on its behalf or under any agreement with it, shall make any loan or advance to any person, firm or corporation soliciting or undertaking to solicit applications for insurance without adequate collateral security, nor shall any such loan or advance be made upon the security of renewal commissions, or of other compensation earned or to be earned by the borrower except advances against compensation for the first year of insurance. A foreign life insurance corporation which shall not conduct its business within the limitations and in accordance with the requirements imposed by this section upon domestic corporations shall not be permitted to do business within the State. This section shall not apply to expenses made or incurred in the business of industrial insurance nor, except as to the limitation of expenses for the first year of insurance and as to compensation of and loans and advances to agents or solicitors, to stock corporations issuing and representing themselves as issuing non-participating policies exclusively.

More Extra-Territorial Jurisdiction.

The amendment of section 96, subjecting all companies doing business in the State of New York to the same limitations as to new business as New York companies, marks a new advance in attempts at extra-territorial limitations.

It hits no company at present, however, and perhaps will not be opposed or resisted, if enacted.

Is Industrial Insurance Counted in Arriving at the Quota?

If industrial insurance were not counted in arriving at the quota of new ordinary insurance allowed, the Metropolitan Life Insurance Company would find its new ordinary business limited to about \$60,000,000 per annum; with the industrial business counted in arriving at the quota, it will be allowed to write up to \$150,000,000, as under the law as it now stands.

The amendment aims at correcting the apparent unfairness involved in leaving the question as to whether the industrial business of other companies, than those especially provided for by

the terms of the section, would not be counted as a part of the company's quota.

Somewhat Mixed and Contradictory.

The chief amendment to section 97 is designed to limit the cost of new business to the actually realizable margins in the first year's premiums, allowing reserves and mortality on the minimum basis provided by law. To accomplish this, whenever the excess of the net annual premium over the cost of insurance by the select and ultimate table is less than the computed present value of the mortality gains, the former must be taken; and when policies are written and lapse in the same calendar year, only so much must be taken as, on the same basis, has actually been realized.

The language of the amendments seems to say, first, that these margins are to be allowed only for policies "in force at the end of said calendar year," and then belies this by saying "or as many twelfths thereof as the insurance was months in force."

The change of the word "commutation" to "calculation" can hardly be called an improvement; and who is calling for commissions at a lower rate than specified in the law, but for a longer period than fourteen years is a puzzle.

The Nylic to Be Taken Care Of.

The New York Life Insurance Company's plan for compensating persistent and successful agents is what is intended to be provided for by the following:

If any such corporation shall compensate its agents, or any of them, after the first insurance year, in whole or in part, upon any other plan than commissions and collection fees, the aggregate sum so paid shall in no year exceed the limitations herein imposed and the schedule and plan of such compensation shall be submitted to and approved by the Superintendent of Insurance.

No More Registered Policies.

The same bill amends the registered policy provisions by prohibiting the issue of such policies after this year.

It is reported that through the efforts of Superintendent Hotchkiss insurance commissioners of twenty-two States, where the law is not absolutely mandatory, will not require the publication of the annual statements of New York companies. Several States require the publication of annual statements of foreign companies, varying from two insertions to thirty, and stipulate the minimum amount to be so expended. Under the retaliatory law the New York Department in the past has required a corresponding amount to be expended in this State by the companies of those States.

THEORY AND PRACTICE OF LIFE INSURANCE.

The central branch of the Y. M. C. A. of Philadelphia has inaugurated a series of lectures on "Life Insurance Problems," commencing on March 5 with a lecture prepared by President Levi G. Fouse, of the Fidelity Mutual Life Insurance Company, upon the "Historical Outline of Life Insurance."

In this lecture, which in Mr. Fouse's absence was delivered by Associate Counsel Calkins, of his company, on his behalf, the history of life insurance was traced from its commencement in England in 1705 to the introduction of participation and thence to the so-called bubble period which culminated in England in 1860, there being 519 registered companies, which, within six years, were reduced to forty-four. Mr. Fouse also traced the history of life insurance in the United States through the boom period following the Civil War, the period of depression in the 70s, the period of marked development and the period of reconstruction, which is now closing; and commented upon this condition as follows:

"History repeats itself in the multiplication of new companies; the laws of survival of the fittest will soon weed out the bubble companies."

The other lectures, which are to follow, are as follows:

March 18—"The Social Progress of Life Insurance"—Dr. Lee K. Frankel, manager industrial department, Metropolitan Life Insurance Company.

March 25—"The Various Systems Explained"—William S. Ashbrook, Provident Life and Trust Company.

April 1—"The Work of the Actuary"—J. Burnett Gibb, actuary Penn Mutual Life Insurance Company.

April 8—"Plans and Their Adaptability to Conditions"—Nelson F. Evans, superintendent of agents, Prudential Insurance Company of America.

April 15—"Policy Contracts"—F. H. Garrigues, mathematician, Penn Mutual Life Insurance Company.

April 22—"Public Supervision and Taxation"—Frederick L. Hoffman, statistician, Prudential Insurance Company of America.

April 29—"Company Management"—Lecturer not yet announced.

May 6—"Securing the Application"—Richard H. Wallace, vice-president, Girard Life Insurance Company.

May 13—"Life Insurance Salesmanship"—Harold Pierce, general agent, New York Life Insurance Company.

The Provident Savings Life Assurance Society of New York announces the appointment of Charles Burger as manager for Western New York, at Rochester, N. Y. Mr. Burger was formerly with the New York Life.

IS THE EQUITABLE TO BE MUTUALIZED?

The New York "Evening Post," of March 5, devoted more than a column to rumors that J. P. Morgan, before his departure for Europe, had virtually completed arrangements for the retirement of the capital stock of the Equitable Life Assurance Society, the controlling interest in which he recently purchased from Thomas F. Ryan. In the newspaper article referred to, it was said that the whole matter had been canvassed with the Superintendent of Insurance and Governor Hughes, who were ready to co-operate in any feasible way to bring about this result.

What Can Be Done Under Existing Law.

The existing law provides for mutualization of stock life insurance companies on certain conditions, which in effect call for the consent of each individual shareholder, as well as for approval by the Superintendent and by the majority of the policyholders, voting at a special election to be called by the Superintendent of Insurance. There is also a limitation, viz., \$100,000, to the minimum amount of surplus which the resulting mutual company must start out with.

Subject to these limitations the present law would admit of the policyholders voting to the stockholders whatever proportion of the surplus they might desire, as a bonus over and above the par value of the capital stock. In view of this, it is perhaps worth while to speculate as the terms would probably be demanded by the stockholders, if called upon to dispose of their shares in this manner. It was reported, when Mr. Ryan bought the controlling interest, that he paid two million, five hundred thousand dollars for same. As the control only calls for 501 shares, it follows that, if all the shareholders were willing to accept the same price, the amount required to purchase the entire stock would be five million dollars. Since the Equitable has more than ten million dollars surplus over its accumulations of tontine surplus, it would seem that as large an amount as this could safely be voted.

The stock, however, from the standpoint of the shareholders has perhaps a somewhat smaller value than in 1906, when it was acquired by Mr. Ryan, for the reason that a large measure of mutualization has already been accomplished, in that the policyholders are now entitled to elect within two of a majority of the board.

Moreover, since the stock represents a burden of only 7 per cent. dividends, or \$7,000 per annum in all, to be paid from surplus earnings of the company,

there are those who profess not to see why anything should be done to enable the shareholders to benefit enormously more by selling their stock than they could by holding it to the end of time. That, however, is as you look at it; and they are not wanting those who urge the other view.

What Could Be Done Under the Charter.

It will be remembered that the commencement of the trouble in 1905, which resulted in the investigation of life insurance companies, was due to a proposal on the part of the board of directors of the Equitable Life Assurance Society to change the management, so as to give the policyholders control of the board of directors along almost exactly the lines which have since been adopted. At that time "The Chronicle" pointed out that a much simpler plan than that suggested and probably more effective as regards mutualization, would have been to carry out the charter provision of the company that the board of directors may at any time empower all holders of policies of \$5,000 or over to vote in person, not for some members of the board of directors, but for all of them. If this were done, and if at any time the management of the company were really unsatisfactory, the policyholders could take the management out of the hands of the stockholders and thereby reduce the capital to the position of a loan, upon which the policyholders would pay 7 per cent. interest, with the advantages that the principal need never be repaid and that in a winding-up proceeding, should such ever be necessary,

This method appears to be open still, which Heaven forbid, would be postponed to all other demands.

It is an interesting question, however, how the Equitable could be more truly mutual than it is and has ever been. Had it been possible for it to be organized without capital stock under the then laws of New York, it is well known that it would have been so organized. From the very beginning, its essential mutuality has been emphasized and the payment of \$7,000 per annum for the guaranty of its \$100,000 capital, scarcely more than the investments represented by that sum earn, in no way impairs that essential mutuality.

The efforts of the officers of the Peoples Mutual Life Association and League, of Syracuse, N. Y., to prevent Superintendent Hotchkiss taking any further steps toward the liquidation of the association will be brought to a climax on March 21, the date now agreed upon for a final hearing before Judge John R. Hazel, in the United States Circuit Court at Buffalo.

THE ACCIDENT TOLL.

When Governor Hughes appointed a commission to inquire into the general subject of causes of accident and employers liability, or employers compensation as the new term runs, it was not anticipated what a far-reaching effect it would have. The purpose of the commission was to frame a revised law governing accidents and on a basis that would be just and modernized, as adapted to the democratic conditions of a republic, as against the feudal system of the past, the laws of which are still on our list of inheritances.

The vice chairman of the commission, Henry R. Seager, who is also professor of economics in Columbia University, has this to say in informing "The Chronicle" that the commission has its report ready for submission to the Legislature:

The Vice Chairman Rises to Remark.

Fourth of July orators delight to point out the various fields in which we excel, but there is one field of which they say very little, and that is that we kill and injure more workmen on our railroads, in our mines and in our factories than in any other country in the world.

On our railroads three times as many employes are killed and five times as many are maimed each year than on the railroads of the United Kingdom, and the situation in our coal mines is almost as bad, for there each year we average a loss of three and one-third out of every thousand persons employed, whereas in England the average is two, in Germany, two and one-half, while in Belgium the average is one.

The prevention of these accidents is a pressing social problem, but it is not of this that I wish to speak to-night, but of the method we have of caring for the 100,000 workmen who are maimed, the 20,000 widows and the 60,000 orphans that are left, as a result of these accidents. Our method of caring for them is neither just nor generous. We leave them to the mercy of a law that has been discredited as out of date in every other civilized country but ours.

There are five things in our present law that are wrong. In the first place, it is fundamentally wrong in principle; in the second place, it fails signally to remedy a serious social problem; in the third, it involves appalling waste; in the fourth, it embitters the relations between the employer and the employed, and in the fifth place, the system is morally demoralizing.

Statistics show that more than one-half of the accidents are due to the hazards of industry, not because the employes are careless, but because of the nature of the industry. In at least three-fourths of the cases the loss falls on the wageearner, and in a great majority of the cases rendering him penniless. Not over 30 per cent. of what the employer is required to spend under the present law goes to the workman.

The Poisonous Variety.

Prof. Seager pointed out that among the evils growing out of the present system was what he styled the type of lawyer known as the ambulance chaser, who seeks the fee of the injured, and the lawyer who tries to settle for the employer. The result of this, he added, was that when the case finally got into the courts there was the strongest inducement for those concerned in the litigation to commit perjury.

"Industrial accidents," Prof. Seager added, "are certainly twice as frequent in the United States in proportion to the number of men employed as they are in the European countries. This makes the defects in our employers' liability law all the more regrettable. Under our law not more than one-fourth of the victims of industrial accidents are entitled to indemnity. Moreover the amount of the liability in cases where the employer is liable is so uncertain and so irregular that employers usually insure themselves against it.

Time for Activity.

"Statistics submitted by the insurance companies show that on the average not more than 45 per cent. of the money employers pay out in premiums is actually paid to injured employes in the settlement of claims. About one-third of this goes to the lawyers, the result being that only about 30 per cent. of what the employers' liability costs the employers is of any benefit to the injured.

"These and other defects in the actual operation of a system of employers' liability based on negligence have led all important countries except the United States to abandon it. Since in 1884 Germany introduced her compulsory accident insurance system, twenty of the leading nations of the world have adopted the plan of putting on industry the cost of indemnifying all the victims of industrial accidents except those who owe their injuries to their own deliberate and willful negligence.

"The principle reason for imposing on the employer the cost of indemnifying the victims of all accidents is that accidents, as a rule, are not due to personal negligence, but to the nature of the industry which the employer carries on for his own benefit. The cost of insuring his plant and machinery is now a regular item in the expense of production; under a system of workmen's compensation the costs of insuring employes from accidents becomes such an item.

"The industry is compelled to pay for men's maimed bodies and short-

ened lives in the same way that it pays for wornout plants and used up raw materials. Both are alike costs, necessary to the prosecution of industry for which consumers for whose benefit industry is carried on should be made to pay.

"As New York is the leading industrial State of the country, there seems to be special reasons why it should take the lead in introducing a more humane and intelligent policy with reference to this law. And there is every reason to anticipate that other States will follow the example of New York."

STILL THEY COME.

In conjunction with many other promotions going on on the Pacific Coast comes the announcement that the Roman Catholic Life Insurance Company, of Spokane, Wash., has been incorporated with a capital and surplus of \$2,000,000. The purpose of the institution is to insure Catholics only.

The dismal failure of P. J. Kieran's \$5,000,000 Fidelity Funding Company, whose purposes were the same as the above-mentioned institution, seems to have had no effect in preventing promotions of this character.

IN NEW ENGLAND

DON'T WANT APPARATUS MOVED.

The plan, said to emanate from Boston City Hall, to remove the fire apparatus from the Mason Street Engine House to a location on Park Square, is meeting with strong opposition. The Mason street house is right in the midst of probably the most valuable district in Boston, including several of the largest department stores, four theatres and many other stores and business concerns. Representatives of these interests have given a strong expression to their dissent from the proposed move. At Tuesday morning's meeting of the Boston Board of Fire Underwriters the matter was taken up, and a unanimous vote was taken in the sense that the proposed change of location was not advisable. Charles B. Wheelock, president of the board, was authorized to appoint a committee of three to present the views of the board at a hearing on the matter set for this afternoon at City Hall, and in accordance therewith appointed C. H. J. Kimball, Thomas L. O'Brien and George McCarthy. At the same meeting of the board Messrs. Lovett, Serfat and Winchester were appointed to serve on the brokers' committee and William E. Davenport, W. A. Muller and W. S. Gierasch on the rating committee for three months.

Sentenced for Insurance Fraud.

In the Superior Criminal Court of Boston, last Thursday, Samuel I. Gordon, Morris Rudnick, Michael Rudnick and Bernard Davis pleaded guilty to a charge of conspiracy to cheat and defraud insurance companies. Gordon was sentenced to the House of Correction for three years. The sentence of the others was postponed one month to enable them to make restitution, which, it is estimated, will cost them \$25,000. If full restitution is made, two of the defendants will be fined \$1,000 each, and the other \$500. These proceedings grew out of a fire which occurred in the fur store of M. August & Co. in Summer street last June, and which was followed by claims on the companies that led to suspicions of incendiarism and the removal of the goods for which indemnity was claimed. These suspicions were confirmed by later investigation, and in the late summer the case was taken in hand and followed up, with the result outlined above. "The Chronicle" at the time published a full list of the companies interested, quite a number of which were not licensed to do business in this State.

Secretary Turnbull to Retire.

Thomas Turnbull, who has served the Hartford Fire Insurance Company faithfully and well for thirty-four years, has given in his resignation as secretary of the company, and will retire April 1 on account of advanced age. Mr. Turnbull has been successively special agent, general agent, assistant secretary and secretary of the Hartford Fire, and his kindly personality, not less than his ability in his field of endeavor, has endeared him to hosts of friends, who will wish him all manner of happiness in his coming days of leisure.

New England Brevities.

The three upper floors of the New England Building at 200 Summer street, Boston, were gutted by fire Saturday night, and the lower floors were severely damaged by smoke and water. There were some fifty tenants in the building, all of whom had some insurance. The aggregate loss is estimated at \$150,000, and the amount of insurance attaching on the building totals \$96,000.

The Franklin Fire Insurance Company of Washington, D. C., was accorded a license to do business in Massachusetts last week, and has selected Edward Winchester, fire manager of the Boston and Old Colony insurance companies, as its representative in the State. The Franklin has a capital of \$200,000, and a surplus of nearly \$255,000.

The Massachusetts Legislative Insurance Committee on Monday reported a bill in the House authorizing companies to pay commissions to agents on policies written on their own lives.

The steamer Manhattan, owned by the Maine Steamship Company, was destroyed by fire at the wharf in Portland last Monday. The vessel was valued at \$150,000 and the cargo at about \$120,000.

W. F. Fiske has been appointed to the vacancy in the office of Field & Cowles, Boston, which followed the resignation of George F. Cowee, who became special agent of the National of Hartford on the 1st inst.

The Phoenix of London and the Commercial Union have recently been admitted to membership in the Underwriters' Bureau of New England.

R. M. Crosby, special agent of the New York Underwriters Agency, has been admitted to membership in the New England Insurance Exchange.

The Fidelity-Phenix Insurance Company of New York received its license to do business in Massachusetts on March 1.

The Teutonia Fire of Pittsburg, one of the companies in the Pittsburg Underwriters, has applied for admission to Massachusetts.

SUMMERHAYS AND UNCLE SAM.

The trial of E. J. Summerhays, a Chicago broker, occupied most of the time of the United States District Court at Chicago last week. When adjournment was taken on Saturday the Government had still many witnesses to bring on and the prospects were that the prosecution would not rest before Tuesday of this week.

Summerhays is charged with using the United States mails to defraud. It is alleged that he solicited fire insurance from many persons and firms, mostly outside of Illinois, secured policies for them, received premiums and failed to pay the companies, resulting in cancellation of the policies for non-payment of premiums. Post-office inspectors have been at work on the case for many months and have secured a vast amount of evidence. The array of the Government's witnesses is a long one, including assured, brokers, company officials and others from New England to the State of Washington.

The Government in introducing its evidence has taken case after case, starting with Summerhay's original circular or letter soliciting the business, identifying all the correspondence which passed, exhibiting the policies, the canceled checks sent in payment of premiums, the notices of cancellation from the companies, in short, tracing each transaction from its beginning to its end.

The evidence has brought out the fact that Summerhays placed much of the business indirectly. For example, John L. Lucas, a Chicago broker, testified that he received orders for insurance from Summerhays, took them to the office of A. Loeb & Sons, whose placer secured the policies from other offices. Eastern brokers, such as Woodcock, Pettibone and others, were also witnesses for the Government, they having placed business for Summerhays.

When assured notified Summerhays that companies had canceled he notified them in some cases, according to letters introduced, that this action had been taken because of misunderstandings with brokers with whom he had open accounts. On this point the prosecution brought on brokers who testified to receiving no money from Summerhays on account, but always in payment of premiums on specific policies.

The Government has prepared its case with very great care and Assistant District Attorneys Voigt and Childs have conducted the prosecution with great skill. Up to Saturday they had scarcely been overruled by Judge Landis on any point.

How Will It End?

The outcome of the case will be of considerable importance. Summerhays himself has not cut so great a figure, but he is only one of a class of Chicago brokers about whose operations there has been much complaint. Whether because the brokers acted with fraudulent intent or simply because they were short of funds, many assured have had policies canceled by the companies for non-payment of premium and have been left to pocket their losses. If Summerhays should be convicted, it would make this way of doing business decidedly dangerous and probably put a check on it. On the other hand, if the Government should fail in this case, after all the care that has been taken in securing evidence, it would be reasonable notice to people seeking cut rates through brokers unknown to them that they are doing business in that way at their own risk. The outcome of this case may do something to clarify the status of the broker. The companies, in canceling for non-payment of premiums, have refused to recognize Summerhays as their agent, but have treated him as the agent of the assured. Yet, in this trial, letters from Summerhays to his customers who had complained about cancellation have been introduced in which he stated that he was the agent of the companies and that payment of the premium to him was payment to the companies.

This uncertainty as to the status of the broker exists in many parts of the West. In comparatively few cities except Chicago is there a recognized broker class. In most of the Western cities insurance men not included among commissioned agents or salaried representatives of companies, come under the head of solicitors. The laws of a number of the States do not recognize brokers at all, but require everybody who solicits insurance to be licensed by some company. The act of applying for a li-

cense for a solicitor, even though he is not given the powers of an agent, is at least a partial recognition of responsibility for him on the part of the company asking the license. In Chicago there is a large class recognized by the business generally as brokers and generally regarded as agents of the assured, yet even there is sometimes a question whether the broker does represent the assured or the company.

VICE-PRESIDENT KLINE TO COME EAST.

George E. Kline, vice-president of the Continental Fire Insurance Company and of the new Fidelity-Phenix, who has been in charge of the Western department of the Continental, and also of the Fidelity since its organization, with headquarters at Chicago, is to come to New York and, in his capacity as ranking vice-president, is to have charge as underwriting manager of both companies. He will leave the Western department in charge, under his direction, of Secretary C. R. Tuttle, who has been associated with him for many years.

Vice-President Kline, who has just turned fifty, has been connected with the Western department of the Continental for nearly 30 years, serving in various capacities with the successive managers, A. Williams, R. J. Taylor, Bentley & Taylor and J. J. McDonald, and succeeding Mr. McDonald. His career has been one of steady and well-deserved promotion, and the management of the Continental has long recognized that a considerable share of its phenomenal underwriting success has been due to the indefatigable labors of its capable Western manager.

Harper Leiper has been promoted by transfer from the Boston, Mass., agency to the position of manager for Southern Ohio, at Cincinnati, O. M. D. Hoyt succeeds Mr. Leiper at the Boston agency, with title of cashier.

THOSE AWFUL KANSAS RATES.

The petition for an injunction to restrain the Kansas authorities from enforcing the rate regulation law of that State filed by the German Alliance in the Federal Court at Topeka, will prove very important if the big question involved can be brought to a decision of the United States Supreme Court. The companies—for the German Alliance is really a petitioner for a number of them—have based their contention on the broad ground that fire insurance is a private business and that the State has no more right to fix fire rates than to fix the price of any commodity. This is getting down to fundamentals. Fire insurance is either what the companies contend it is or it is of a public or semi-public character more or less resembling transportation and various other public utilities.

If the companies can succeed in getting this broad question before the Supreme Court, without getting it sidetracked and the case decided on some minor point, it will result in placing the business on a basis much more satisfactory because more certain. Then the States will recognize that they can go so far and no further in regulating the business of the companies, or the companies will recognize the broad powers of the States as to regulation and lay their plans accordingly.

The decision of this question would have a bearing on much legislation which is in prospect in Western States. As the companies show no signs of getting together and regulating what they recognize as abuses in the business, there is little doubt that some of the States are going to attempt to do this work for them. As the interests involved are large it is very important to know just what the powers of the States are. Otherwise there is likely to be much legislation which will affect the business seriously and then be found to be unconstitutional after much inconvenience and loss have been caused.

HARTIGAN'S DENIAL.

In a recent issue "The Chronicle" announced that Insurance Commissioner Hartigan was preparing a bill limiting the amount of commission which was to be paid by fire insurance companies in Minnesota, to 15 per cent. Mr. Hartigan says that he has not prepared any such bill, has not recommended it, and is not aware that any such bill has been prepared by any one in that State.

He writes "The Chronicle" as follows:

Following the annual convention of the Insurance Commissioners at Col-

orado Springs last summer, I appointed a special committee to investigate the expenses of fire insurance companies. This committee has already held one meeting and will probably hold another in Chicago sometime during the month of April. This committee is investigating carefully the subject of expenses, including commissions. Any action by me, such as suggested in the article referred to, would not only be premature but also discourteous to the committee which I appointed. I have never even thought of preparing a bill. The only basis that I can imagine for such statement is an interview which I gave to the "American Agency Bulletin," in which I said, speaking of expenses:

"These matters should be controlled and regulated by the companies, but it seems impossible to secure the necessary co-operation to effect this reform. If the companies are really unable to control the situation, I see no other possible outcome but to institute State control of these matters."

AS TO UNIFORM LAWS.

Speaking on the subject of uniform laws Manager Frank Lock, of the Atlas Assurance of London, makes the following particularly interesting comment in the course of an extended talk on the matter:

The endeavor on the part of the companies honestly to observe the multifarious requirements of some forty-eight States and Territories, each differing from the other, is difficult and not without danger because of the penalties involved. In one State requirements may be enforced under penalty which in the adjacent State are expressly forbidden under penalties for observance. For instance, one State may require the absolute observance, under penalty, of tariff rates to be publicly exhibited, while another State forbids, under penalty, any form of agreement on a tariff. One State prohibits rebating, while the other forbids anything which will tend to prevent any man from obtaining his individual insurance as cheaply as possible. In a place like Bristol, intersected by the State line of Virginia and Tennessee, we may insure a man owning a piece of property situated across the dividing State line; but should we, in case of fire loss, treat him alike for both ends of his building we should be under penalty of the law to one State or the other! Many pages could be filled with inconsistent and contradictory requirements forced upon the body public to its great detriment, merely because its individual constituents dwell on different sides of imaginary boundary lines, although with identical interests they are served by the same companies for the same purposes. In result much injustice is wrought, the cost of the service is heavy and uneven, its character is not of equal benefit, these things being due to causes artificial and largely remediable by uniformity in law.

The Commercial Casualty, New York's new insurance enterprise, expects to begin business in New York April 1. It will write all miscellaneous lines.

WESTERN UNION CONDITIONS.

The prospect of a number of non-union companies in the West joining the Western Union, there is now renewed talk of an organization of non-union companies which pay reasonable commissions to fight the excess commission companies. Such a movement has been carried on quietly for some time. It was not deemed wise to tackle too large a job at once, so the plan was tried in Indiana first. A prominent non-union manager stated recently that there are very few agencies left in Indiana in which standard non-union companies are paying graded commissions and others are paying excess. The plan appears to be somewhat like that of the Western Union previous to 1899, when union companies sought to require agents representing both union and non-union companies to agree not to accept from non-union companies higher commissions than were paid by the union companies. Such pledges have been secured in many places in Indiana. Where the agent will not come to time, it is up to the low commission companies to leave or compel him to resign the excess commission companies.

LEADING FIRE COMPANY OF THE WORLD

A first class life underwriter with a successful field record, and an untarnished reputation can secure good open territory by addressing

INSURANCE COMPANY**

Binghamton, N. Y.

SOMETHING DOING.

The casualty developments just at hand confirms all "The Chronicle" has predicted along that line during the past three years. It is just as well to retrospect a bit in order to get the correct idea, or "truth," as the unfamiliar "Register" terms "Chronicle" news.

For a period already mentioned "The Chronicle" has pointed out that the Fidelity and Casualty plan of writing multiple lines is the only one that promises a full measure of success. It is the business system of Wanamaker applied to the surety and casualty insurance companies.

The day of the single line company seems to have passed. Superintendent Hotchkiss of New York State has evidently realized this, as evidenced by the proposed amendments he has submitted with his annual report to the Legislature in which he recommends a widening of the powers of casualty companies. It is intended to permit them to write lines that are now denied them and "single lined," such as live stock, water damage, etc. If made effective this proposition would be an approach to the English law and enable American companies to effectually compete with the so-called policies of the foreign Lloyds and wild-cats now operating here.

The great trend of the States toward employers liability legislation has also served to emphasize the new condition. This is coming quickly, and liability insurance will shortly be as essential an element of credit to an employer as fire or life indemnity. In fact, the credit men's association has already put a notice on their "bulletin board," and it is a pretty sure thing that it will play an important part in the granting of credit and the securing of credit insurance in the early future.

Maryland Casualty Enters.

Now enters the Maryland Casualty, the Fidelity and Deposit and the United States Fidelity and Guaranty companies into the multiple lines, each of them having applied for amended charters under the Maryland law, which permits about anything possible in what is technically termed "miscellaneous" insurance lines. They are nearest of any companies to the English law which simply places all insurance under one head, and an insurance company there may do any form of underwriting, whether it be marine, fire, life or the loss of an election or a horse race.

It is notable that the principal States have shown a marked tendency toward getting away from the restrictive laws by which the surety and casualty companies were first sur-

rounded. This is due in large measure to the rapidly developed co-operation among the heads of the insurance departments of the States and the common sense principle of uniform laws and practices.

The lesson of the whole subject to date is that these lines are so interwoven that the successful company must not let a patron depart with a policy on one line and find another one to care for his four or five other lines.

The entry of the Maryland Casualty into the surety field will no doubt be welcomed by all the surety companies, because its vigorous financial condition makes it a most desirable co-insurer and re-insurer, a very desirable and essential connection for any company because of the ten per cent. limitation of a single risk.

Aetna Indemnity Control Passes.

The attractiveness of the casualty field is further evidenced by the purchase of a controlling interest in the Aetna Indemnity Company by the Commercial Union Assurance Company of London. The Aetna has led a rather rugged life since its accouchement, but this deal will put it on firm ground and it will probably become a factor of importance in surety and casualty circles. The English company under New York laws is confined to fire business, and this move indicates that it has its eye on the coming flood of liability business. The Ocean has also been flirting with the proposition and because Uncle Sam will not accept any but home companies on its bonds (and the same rule obtains in the States) a quiet survey of the field suggested organizing a company with its own man in charge rather than buying out one that had a very large accumulation of risks of doubtful value—and it did it. Perhaps the new insurance code for the District of Columbia that is trying to percolate or be percolated through Congress may admit the foreign companies to the race for the Government surety business, but it has a rather slim chance. About every surety company now in active operation has a representative in one or the other branch of Congress. If it does take them from the Liverpool and London and Globe, the Sun, the North British and Mercantile, the General Accident, the Frankfort, the Munich, in fact all the foreign companies, would instantly take rank in the surety field, provided solely that they did not know or care for the surety business, not recognizing it as insurance, which most of them do not. Some would probably accept reinsurance because that is about the simplest underwriting method of using the other man's brains for your own profit.

This is the amendment to the Maryland Casualty's charter:

The Maryland Casualty Company is hereby authorized and empowered to insure the fidelity of persons holding places of trust or responsibility in, to or under any State, county or city, corporation, company, person or persons whatsoever, to become security for the faithful performance of any trust, office, duty, contract or agreement, and to supersede any judgment, or to go upon any appeal or other bond; and it is further authorized to become sole surety in all cases, whereby two or more sureties are required, and it shall and may be lawful for any court, register, clerk or other officer to approve said company as sole surety in all such cases, but in such cases the officers and affairs of said company may be subject to an examination by such court, register, clerk or other officers, and it shall be lawful for said company to stipulate and provide for indemnity from the parties aforesaid for whom it shall so become responsible and to enforce any bond, contract, agreement, pledge or other security made or given for that purpose.

The attention of the Minister of Justice has been called to a recent decision of the Ontario High Court, calling into question the constitutionality of the Dominion insurance act. Judge Sect, of Montreal, also has given judgment that the insurance act is ultra vires and that the provinces, only, have jurisdiction in insurance legislation.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

THE ELECTRICAL HAZARD.

Representatives of the Underwriters Association of New York appeared before the Assembly Cities Committee last week to urge a favorable report on the bill calling for a State electrical board. They urged that a decrease in the fire hazard by means of improvements in electrical work would mean a decrease in rates. This would be possible, for the bill calls for a State electrical board to examine and license applicants for certificates as master electricians.

Among those who appeared in favor of the measure was F. W. Fish, an electrical engineer of Rochester. He said he represented the electrical contractors of Rochester and the Builders' Exchange, which represents 70 per cent. of the employing power in building trades. He said there was provision for a fine of \$50 in Rochester if a current was turned into a wire without inspection by the department of public safety, but that the underwriters' certificate on the wire was accepted. He thought defective wiring caused many fires, and said the builders were strongly in favor of the bill. The opposition will be heard on March 15.

WESTERN LIABILITY MAKES POOR SHOWING.

Returns of liability premiums and losses of a number of Western States show that many of the companies had a very bad liability experience in those States last year. Part of this result is accounted for on the ground that during 1908 much business was renewed on 1907 estimates of pay rolls and that the excess premiums in 1909 were much below the average, thus preventing the natural increase in premiums, while the resumption of business in 1909 brought the pay rolls back to something like the normal figure and gave about the usual volume of losses. It has also been said that the companies found last year an opportune time to settle a number of old contested claims.

The fact remains, however, that the liability business in some of the Western States is in bad shape. Even companies not easily scared are finding it necessary to trim some classes closely, and unless there is an improvement more of the same sort of work will probably be found necessary.

Ben G. Chapman, formerly in charge of the Improved Risk Department of the American Central Insurance Company, has been appointed secretary of the company. Louis A. Riemann, who has been chief examiner, becomes assistant.

PACIFIC COAST CASUALTY.

President Green has made a showing for the Pacific Coast Casualty Company for 1909 that entitles him to the tribute which is not usually extended.

The company has made a prosperous showing for the year. It has been handicapped previously by its small capital and the large volume of its business, which has necessitated premium and loss reserves that kept its available surplus below the plethora point, but since it has increased the capital and added to the surplus it may soon become a powerful influence all over the country, so far as casualty business goes.

President Green is thoroughly familiar with the general casualty conditions on the Coast and is getting wise in the East. The entry into New York has given rise to inquiry as to how extended a business the company may go in for. It is qualified for all the miscellaneous lines, which include practically everything in underwriting aside from fire, life, marine and real estate titles. It may make surety bonds of every character, issue accident policies, insure folks against about everything on earth except fire. This is a tremendous advantage with brokers who handle whole lines, say for a concern like the Standard Oil, which takes all multiple lines, affords a most attractive proposition for them.

As stated elsewhere in this issue, the multiple line company has the single liners at a severe disadvantage, because it appeals quickly to an agent or broker, and for this reason the Pacific Coast Casualty will not be a laggard.

The Royal Indemnity Company has been organized at Omaha, Neb. The incorporators are John Steele, of the Northwestern Mutual Life; F. W. Herron, of the Lion Bonding Company; W. R. Adair and F. W. Myers. The company has \$100,000 capital.

MEET ON APRIL 13.

The semi-annual meeting of the Western Union will be held at the New Willard Hotel, at Washington, D. C., on April 13 and 14. President Lenehan has appointed the following committee to prepare the order of business: Walter H. Sage, chairman; J. H. Kelsey, P. D. McGregor, W. E. Chapin, Charles H. Barry, George M. Lovejoy and A. G. Dugan.

Frederick J. Beals has been elected assistant secretary of the Springfield Fire & Marine Insurance Company. He will take office on April 1. He is succeeded as special agent of the company by Alfred L. Mooney.

AGENTS WANTED FOR UNOCCUPIED TERRITORY

A GOOD START.

A very highly esteemed correspondent writes "The Chronicle" from Chattanooga, Tenn., in this wise:

"I am enclosing you the printed matter of a company recently formed here, and which held its first meeting for election of officers yesterday (March 3), at which it was decided to increase its capital to \$200,000.

"The printed matter shows up mighty fine, and if it can do its share of the business the stock ought to be very good."

Everything has to have a beginning. This Chattanooga company looks well on paper, because it has some good names on its literature, but there is an eloquent absence of any underwriter of experience; and the printed matter deals solely with casualty results in that State for the past year, and quotes only the figures of the companies showing an excess of premium income over the loss outgo in premiums, a totally erroneous particularity upon which to generalize. Therefore it is half truthful, and there is an old adage which says something about half the truth being a hundred times worse than a downright lie. The Western promoters, or, rather, drummers for stock sales, have played this game to a finish in their territory.

But just to show how little these young entries into insurance exploitations or promotions actually know of the business of underwriting as opposed to gambling is illustrated in their following summary of results for the companies that didn't lose money during the year in Tennessee:

Total premiums collected, \$675,759.66; total losses paid, \$281,419.28; balance for expenses and dividends, \$395,340.38.

The prospectus shows evidence of amateur preparation, and it omits the total official ratio of experience of several leading companies. It falls into the same error as many of the new promotions in that it implies the impression that all a company's premium income over its losses is pure and simple profit. It is well known that the loss ratio of a soundly conducted company cannot safely exceed thirty per cent., and this on top of a thirty per cent. commission and a fixed home office expense that flutters continually around sixty per cent. should be a tip to investors to scratch their heads for a minute.

This is not intended to discourage the remarkable development of new casualty and surety companies now present, but simply as a warning that it is bad judgment if you own a railroad and buy a locomotive to expect it to work automatically. Get an engineer.

PECULIAR.

When the Bankers Surety Company procured indictments against a few of its excise bond agents in this city for fraudulent financial transactions, alleging the unlawful retention of some twenty thousand dollars or so of premium collections, there was a mild sort of a stir in surety excise circles, not because the practices in vogue were so big and wide that the bagatelle of a twenty dollar bond premium, in comparison with a five hundred thousand dollar fee, was entirely negligible, but because the business was endangered.

On Monday the case of Reister, one of the indicted agents, was dismissed by the discharge of his bond. Wireless communication established between this station and the district attorney's office boy or janitor—it don't matter which—develops some interesting goings-on, and incidentally sheds some light on recent occurrences that were not altogether in need of a searchlight to assist elucidation. This airless message was along the line that the dropping of the matter was due to the failure of the prosecution to prosecute, and naturally that aroused a great quantity of confabbing.

Freely spoken it is said that some of the company's officers or representatives were afraid to take the witness stand against Reister. This may or may not be true, but it affords a lot of material for the men who make up estimates on stock values in Wall street.

CHICAGO'S NEW FIRE COMPANY.

Robert H. Hunter and A. C. Olds are organizing the Commercial National Fire Insurance Company of Chicago. The company will have a capital of \$200,000 and a surplus of equal amount. The organizers announce that none of the surplus will be used for organizing expenses. This is rather unusual nowadays, and especially in Chicago.

GETTING HEATED.

That was a rather peculiar and particularly warm meeting that was held by a small number of excise bond applicants at 110 East Fifty-ninth street a few days ago.

The meeting resulted from an anonymous typewritten call and it is reported that something less than 50 responded. Its purpose was to protest against the action of one or two of the surety companies in refusing to surrender collateral deposited to secure a bond until the full three years after expiration of the bond, that being the period now fixed for the liability to expire.

There is a number of saloonkeepers who can secure their bond only by depositing collateral and to have to do this each year for three years, under the new law, they regard as a hardship.

In addition to their protest they launched the frequently made proposition to organize their own bonding company. This may not be considered seriously for obvious reasons long since tried out, but it indicates the way the wind blows and incidentally that it's a troublous business for surety companies.

THE BURGLARY SITUATION.

Conditions in burglary circles are so varying from week to week that it is impossible to prophecy with any reasonable degree of accuracy what the outcome may be.

With the Ocean and the United States Fidelity and Guaranty withdrawing from the association and the Maryland Casualty joining it an idea may be formed. Then, with the half dozen or so new entries in the burglary field that are promised in the very near future, the situation is further complicated.

It looks at present as if all agreements and rates will be cast to the winds and the old free-for-all conditions and chaos will come in again.

TERHUNE RESIGNS.

T. B. M. Terhune, manager in New York of the personal accident and health department of the Philadelphia Casualty Company, has resigned that position to enter the general insurance business via Simon Schiff & Son, the firm name of which will be changed to Simon, Terhune & Co., with headquarters, as heretofore, at No. 165 Broadway. It is understood that negotiations are under way whereby the new firm will act as State agents for a large out-of-town casualty company.

Mr. Terhune is an experienced casualty man, having had for several

years charge of the Maryland Casualty Company's personal accident, health and burglary departments here, resigning that connection to accept a position with the Philadelphia Casualty Company.

SECRETARY CONGDON.

A Baltimore boy who has made good in the insurance business is Mr. Gilbert Congdon, who was recently elected secretary of the Empire State Surety Company of New York. Mr. Congdon, when presiding in this city, was connected with the United States Fidelity & Guaranty Company; afterwards he was connected with the National Surety Company of New York as assistant secretary and agency superintendent, which position he left in 1908 to connect himself with the Empire State as agency superintendent. Mr. Congdon is a young man of great energy and pleasing personality and one who is a favorite with the agents. In his recent promotion as secretary the company shows its appreciation of an officer who has done his work well. Mr. Congdon, in addition to his position as secretary, will continue his work as agency superintendent.—Baltimore "Underwriter."

THE GREAT SOUTHERN CASUALTY.

To begin with this is a casualty in reality. It was conceived in sin and born in iniquity. It launched an impossible proposition and landed as is usual. As a promotion stock scheme it was a gem, but as a winner it landed on the rock shore of a receivership, where it now waits for some "wrecker" that is not operating solely for salvage.

"LLOYDS."

It is at last in evidence that some semblance of activity against the so-called Lloyds has been aroused in the Insurance Department by the long campaign of "The Chronicle" against wild-cats.

In addition to the very mild provision in Superintendent Hotchkiss' suggested amendments of the present insurance laws of New York, Assemblyman A. F. Allen, chairman of the House insurance committee, has just introduced in the Legislature a bill which has the sanction of the State Insurance Department, and amends the insurance law in relation to persons, partnerships or associations, engaging in the business of insurance as "Lloyds" or "inter-insurers," as follows:

What Superintendent Hotchkiss Proposes.

Section 1. Chapter 33 of the laws of 1909, entitled "An act in relation to insurance corporations constituting chapter 28 of the consolidated laws," is hereby amended by adding thereto an article, to be known as article 10, to read as follows:

ARTICLE 10.

LLOYDS AND INTER-INSURERS.

Section 300. Application of article.

301. Application, examination and certificate of authority.

302. General provisions affecting Lloyds and inter-insurers.

303. Additional requirements, in the discretion of the Superintendent of Insurance.

304. Applications of other sections of this chapter.

300. Application of article. Notwithstanding the provisions of section 54 of this chapter, persons, partnerships or associations which, on October 1, 1892, were lawfully and actually engaged in the business of insurance as Lloyds or inter-insurers may, after January 1, 1911, continue to do the business of insurance in this State, provided that such persons, partnerships and associations shall comply with the provisions of this article, but not otherwise. No persons, partnerships or associations other than those specified in this section, and which shall receive the certificate of the Superintendent of Insurance specified in section 301 of this chapter, shall, after January 1, 1911, engage in the business of insurance in this State as Lloyds or inter-insurers. Any persons, partnerships or association which, after January 1, 1911, shall in this State engage in the business of insurance as Lloyds or inter-insurers, or represent or advertise that they are so engaged, without having been authorized so to do in accordance with the provisions of this article, and any agent, sub-agent, or representative of any such persons, partnerships, association not so authorized to do such business in this State, who shall after January 1, 1911, in any way represent any such unauthorized persons, partnership or association, directly or indirectly, in

engaging or attempting to engage in the business of insurance, shall be guilty of a misdemeanor.

301. Application, examination and certificate of authority. Not later than August 1, 1910, any persons, partnerships or associations claiming that they were lawfully and actually doing the business of insurance in this State as Lloyds or inter-insurers on October 1, 1892, shall file with the Superintendent of Insurance, on blanks furnished by him for that purpose, (a) an application for a certificate authorizing the continuance of such business after January 1, 1911, which application shall specify the kinds of insurance intended to be written after the last mentioned day; (b) a verified statement of the condition of such Lloyds or inter-insurers as of the first day of July, 1910; (c) an agreement, executed and duly acknowledged by each and every individual underwriter of inter-insurer, providing in substance that personal service of a summons or other legal process in an action against any such Lloyds or inter-insurers, if made upon a person specified in such agreement and resident in the State of New York, shall be equivalent to the personal service within this State of such summons of other process on each and every of such individual underwriters or inter-insurers; and (d) such other matters as the Superintendent of Insurance may prescribe. Thereafter, and not later than December 1, 1910, the financial condition of and the methods of doing business by the persons, partnerships and associations so applying, shall be examined as provided in section 39 of this chapter. Thereafter, but not earlier than January 1, 1911, the Superintendent of Insurance shall grant to such persons, partnerships and associations as will, in his judgment, safely conduct the business of insurance in this State a certificate of authority so to do, which certificate shall be revokable or subject to suspension, on cause shown and after due hearing, at any time. Such certificate shall indicate the kinds of insurance which may be written by such persons, partnerships or associations, provided that the same are not greater or other than those now or which may hereafter be specified in sections 110 and 150 of this chapter.

302. General provisions affecting Lloyds and inter-insurers. No such persons, partnerships or association shall, after January 1, 1911, engage in the business of insurance in this State as Lloyds or inter-insurers, (a) unless there shall be on file in the office of the Superintendent of Insurance a copy of the original articles of association, copartnership agreement or inter-insurance contract, together with all amendments thereto, accompanied by an affidavit, verified by an attorney-in-fact, to the effect that it is a true copy, and stating where the principal office of such persons, partnership or association so doing such business is located, the kinds of insurance in which it is engaged, the name under which business is done and the names and postoffice addresses of all the underwriters, inter-insurers and attorneys-in-fact so doing business as Lloyds or inter-insurers, which affidavit shall be so verified not earlier than December 15, 1910; or (b) which shall change the name under which business is done, without first obtaining the written approval of the Superintendent of Insurance; or (c) which shall establish

branches under other or different names or titles. Every change in the underwriters, inter-insurers or attorney-in-fact within twenty days after the affidavit previously mentioned in this article, shall be reported to the Superintendent of Insurance, by a written, verified statement of an attorney-in-fact within twenty days after the same has been made, which affidavit shall be accompanied by an agreement, executed and duly acknowledged, and binding the new underwriter or underwriters, inter-insurer or inter-insurers, to the original agreement between all the underwriters or inter-insurers required to be filed by section 331 of this chapter, with regard to the service of process.

303. Additional requirements, in the discretion of the Superintendent of Insurance. The Superintendent of Insurance shall have authority to make such rules and regulations concerning underwriters' deposits and the methods of doing business of any persons, partnerships or associations specified in this article as, in his opinion, will best promote the interests of the people of this State; provided that such rules and regulations are fixed after notice and hearing granted to all such persons, partnerships and associations actually and lawfully engaged in the business of insurance as Lloyds or inter-insurers.

304. Application of other sections to this chapter. After January 1, 1911, sections 6, 7, 9, 16, 20, 21, 22, 36, 39, 44, 45, 46, 47, 48, 49, 53, 58, 63, 118, and, as to the form and use of standard fire policies, 121 of this chapter are hereby, to the extent that they are now or hereafter may become applicable to corporations authorized to engage in the business of insurance in this State and specified in sections 110 and 150 of this chapter, made specifically applicable to any persons, partnerships or associations to which this article is applicable provided that, where any of such sections imposes a duty on or prohibits any act by or in any way refers to the officers or directors of any such corporation, such sections, when read in connection with this article, shall be deemed to mean respectively the duly authorized attorney-in-fact or attorneys-in-fact or the executive, underwriting or managing committee, of such persons, partnerships or associations, and provided, further, that where any of such sections refers to a corporation, the same, when read in connection with this article, shall be deemed to mean the persons, partnerships or associations to which this article is applicable.

2. Sections 57, 142, 143 and 162 of this chapter and the last sentence in section 121 of this chapter, beginning with the words "It shall not be lawful" and ending with the words "in this State," as well as all acts or parts of acts inconsistent with this act, are hereby repealed.

3. This act, except section 2 thereof, shall take effect July 1, 1910, and section 2 shall take effect on January 1, 1911.

The insurance atmosphere seems to be clearing of these Lloyds "comets," or meteoric underwritings designated by every insurance faker of an agent as "Lloyds." Lloyds is a good word to conjure with and in its name many wrongs are committed daily. Hence the bill at Albany to curb their operations.

USES.**Computing Annual Term Insurance Premiums:**

Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:

Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.

By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:

Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:

Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:

Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:

Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:

Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.

Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.

Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.**Surrender Values.****Dividends.**

For these purposes the "select and ultimate" will be most useful.

Why No Insurance Institutes in the United States?

The publication by Charles and Edwin Layton, Farringdon street, London, E. C., England, of the "Journal of the Insurance Institute of Great Britain and Ireland," for 1909, is again a reminder that the insurance interests of the United States are backward in the matter of co-operation for the dissemination of general intelligence, the encouragement of insurance education and the development of special skill in insurance matters.

The Insurance Institute of Great Britain and Ireland is a representative body, composed of delegates from a large number of Insurance Institutes in different parts of Great Britain and her possessions. There are 18 institutes in Great Britain and four in the Colonies; and the "Journal" publishes selected papers from among those read in the various Insurance Institutes.

Fire Insurance Text-Book Recommended.

This publication is prefaced by the statement as to what has been accomplished during the year, one of the most important things being the examination of 699 persons upon insurance subjects.

It is especially recommended by the secretary that arrangements be made for the preparation of a text-book on fire insurance. He does not recommend the same as regards accident insurance because he thinks that there is not yet sufficient material, nor as regards life insurance "because a sufficient number of text-books already exist." The following is from his recommendations in this regard:

The point also has to be kept in view, that the science of fire insurance is developing with rapid strides. Much that has been written in the past has

become obsolete, for as time goes on new ideas take the place of old ones. The task of compiling the volume—of filling up the blanks in the matter already published, and of eliminating what is unnecessary—would unquestionably be a difficult one, and would require to be placed in competent hands; but I am sure that among our number there are men who could admirably carry out the task.

Among the papers published in this number of the "Journal of the Institute" is to be found the exceedingly interesting and instructive paper, "Classification of Life Insurance Risks," by D. E. Kilgour, A.I.A., F.I.A., actuary of the North American Life Insurance Company, of Toronto, Can., which was read before the Insurance Institute of Toronto on April 20, 1909, and was at the time fully reported and reviewed for the benefit of readers of "The Chronicle."

In subsequent issues of "The Chronicle," fire insurance and casualty insurance papers will be considered. The papers, other than Mr. Kilgour's relating to life insurance, are as follows:

"Special Policies (Life)."

A paper upon "Special Policies (Life)" was read by William Penman, Jr., F.I.A., of the Atlas Assurance Company, of London, before the Insurance Institute of London, on February 24, 1909. The following paragraphs shows to what a degree the writer favors the idea of the free development of special policies:

It is generally both interesting and instructive to consider a subject from the historical point of view, and even so modern a theme as special policies is not, I think, an exception to the rule, for if we go back far enough even a whole of life policy was a special scheme, and, in considering the history of special policies, we are dealing with the gradual development of life assurance from its earliest beginnings.

He rapidly traces the development of various forms of policies as follows:

The special scheme of the Amicable Society, 1706.

The level premium life insurance by the "Old Equitable," 1762.

Limited Payment Life Insurance by the Atlas Assurance Company, 1816.

Survivorship Insurance, about 1816.

Non-participating endowment insurance, about 1839.

Participating endowment insurance, about 1873.

Double endowment insurance, about 1890.

He fully discusses "Convertible Term Policies" and the reasons put forth for confining the privilege of conversion of a term policy into a whole life or endowment policy, to the earlier years of the term, and comes to the conclusion: "I cannot say that there is much, if any, disadvantage to the office on allowing the option to be exercised right up to the end of the term." In so holding, however, he is dealing with policies for which premiums have been on the basis that the lives will not all be select at the time the policies are converted into other forms, and which, also, are not renewable as term policies. The method of loading for this purpose he describes carefully in non-mathematical language and also illustrates by diagrams.

The "Discounted Bonus" policy also treated by him, has not so far been introduced in the United States, the nearest approach to it being the low premium "7-year Equalization" policies, formerly issued by the New York Life Insurance Company. The idea under the "Discounted Bonus" policy is that it is assumed that a certain amount of bonus or dividend will be earned, and this is commuted into an equal annual reduction of the premium. If the anticipated rate of bo-

nus is not realized, there is either an increase of the premium for the next five years to offset the loss to the company or a corresponding diminution of the sum insured. On the other hand, if a larger bonus is realized, there is a diminution of the discounted rates of premium.

Though the British companies are very careful concerning their bonus assumptions, it is fully recognized that there may be disappointments and that such would be serious.

The net discounted bonus premiums, that is, the premiums after the discount has been taken off, are usually slightly higher than the non-participating rates of the same company, but in some cases they are actually lower.

The writer seems to find the same general conditions existing in Great Britain as are usually found in this country concerning non-participating insurance, viz.:

Generally speaking, people do not care about a non-profit policy. They know that, notwithstanding a few exceptions, the position of British life assurance offices is such that the bonuses may be regarded as amply secured, and that the additional premium paid for the privilege of participating in the profits is money spent in a remunerative manner.

But this condition seems to be changing slowly, for in another place he says:

The past few years have seen a very marked reduction in non-profit rates, and, in my opinion, this has to a large extent been due to the necessity for competing with the class of policy we have just been considering.

"Double Endowment Assurance," the next form considered, is nearly as well known in the United States as in Great Britain, and has been chiefly used for the same purpose, viz.: for dealing with under-average lives, the especially heavy hazard in the earlier years being offset by the company's especially advantageous position in the later years when the death of the insured would involve a forfeiture of a considerable sum to the company.

"Children's Deferred Assurances" have not, so far, made their appearance in the United States, though when they were first introduced by the Australian Mutual Provident Society some years ago, "The Chronicle" printed a full description of the same, setting forth the chief advantages.

The plan consists in issuing policies upon young children, which do not go into force until they are of the age of, say 21 years, though premiums are payable from the outset. The insurance goes into effect immediately upon the life insured reaching age 21 and without regard to the then condition of health, and, of course, the premiums which have been paid for

several years previous operate both to give immediate value to the policy, and also to keep the premium very low throughout life.

By this means, for instance, a father, by taking insurance upon the life of his son immediately after his birth, could perhaps secure a premium of about \$7 per \$1,000 of insurance throughout the life of that son; or, for instance, on a policy of \$20,000 a premium of say \$140 per annum. He would thus be making provision for the future of the son and the son's family in such manner that it would be very easy for the protection to be carried.

Usually, in event of the death of the child before reaching the age of 21, the premiums are returned and sometimes a "specially liberal cash surrender is guaranteed on attainment of age 21."

The writer says:

In most cases medical examination is dispensed with. Full information as to family history and illness is always obtainable, and, in the case of a child, no doubt this is sufficient.

He also says of the advantages of this plan of insurance:

Whilst these children's deferred assurances are offered on terms which are advantageous to the public, they are, also, I think, a class of policy well worth cultivating by offices, for they provide an opportunity for doing further business with those who are now customers, and at the same time bring the office into close relationship with the rising generation.

The sale of life insurance "Without Medical Examination" appears to be growing in Great Britain. The writer describes four different methods under which it is now being undertaken, viz.:

1. Double endowment policies at ordinary premiums.

2. Life or endowment policies at ordinary rates, under which but one-third benefit is paid in event of death the first year; two-thirds in event of death the second year; and full benefit only in event of death after two full years, except that in event of death by accident the full benefit is paid from the outset.

3. A life policy on an increasing insurance plan, that is, with a small insurance at the outset and slowly and steadily increasing.

4. Single premium insurance, either life or endowment, with a special provision that in event of death the first year the single premium with interest shall be returned and no further benefit paid.

While a considerable business is being transacted, it is the opinion of the writer that if all the companies were to undertake this business there would be a very small amount for each, and he also finds the following objection to it:

There appears to be a considerable risk that agents would regard such schemes as specially devised for the

acceptance of underaverage lives, and generally the conditions seem to be such that good practical management would be if possible of greater importance than usual.

There seems to be a somewhat similar development of insurance "With Cessation of Premiums in Event of Total and Permanent Disability," in Great Britain, as in the United States, both countries being far behind the continental countries of Europe in this form of insurance. The rules in Great Britain also appear to be very nearly the same as in this country and are thus stated:

Earliest age at entry, 25; latest age from 45 to 55; benefits in event of total disability confined to not beyond age 60 or 65.

There is one difference, however, viz.: that while in this country for the most part the benefit has been charged without any extra charge, or at least any extra charge which is made known to insured, the practice in Great Britain is to add about 5 per cent. to the usual premium and the opinion is expressed by the writer that this "is a lot to pay to cover the risk of permanent incapacity."

"Non-Abstainers in Life Assurance Companies."

A paper was presented by Dr. Ebenezer Duncan before the Insurance and Actuarial Society of Glasgow on February 1, 1909, in which he discusses certain inferences from the report of Roderick M. Moore, F.A.S., upon "Comparative Mortality Among Assured Lives," published in the "Journal of the Institute of Actuaries" in January, 1903, comparing the death rates of abstainers and non-abstainers. Dr. Duncan expresses the opinion that "the elaborate tables published in Mr. Moore's paper have, in my opinion, settled the question," that is, the question as to whether the death rate among total abstainers is or is not lower than among insured lives of persons who use alcohol.

From this he proceeds to discuss whether, if it were possible to ex-

SPECIAL OPPORTUNITIES offered now in Southern States to Representatives of

**CITIZENS
LIFE
INSURANCE
CO.**

W. H. GREGORY,
President.

clude from the non-abstaining group all who at any time in their lives materially exceeded Anstey's limit or a limit which hereafter sets up at a lower point, for persons not engaged in manual labor, the remaining group of moderate drinkers would not show at least as low mortality rates as the total abstainers.

While, of course, he is unable to adduce any statistics establishing his proposition, he is clearly of the opinion that such moderate drinkers would be found to show even lower mortality rates than the abstainers.

"Personal and Family History in Relation to Life Insurance."

Dr. J. Dulberg read on January 3, 1909, a paper upon "Personal and Family History Made With Relation to Life Insurance," before the Insurance Association of Manchester, in which he set forth many interesting incidents in a medical examiner's experience, but did not present anything which would be especially new or of great interest to American readers.

"Undesirables."

Dr. Tom. R. Taylor, of Leeds, read a paper upon "Undesirables" before the Insurance Institute of York, on December 16, 1907, which is included in this series. It is mainly interesting for the exceedingly pointed and careful suggestions made in regard to matters of personal appearance, as, for instance:

One of the most certain signs that a man is in the "sear and yellow leaf" is the thinning and wrinkling of the neck. And, gentlemen, should an acquaintance begin to show a falling-in and hollowing of the back of the neck, without any apparent cause save the ravages of time, you may regard him as long past his prime.

The discussion of color is also very interesting, ranging from the "reddish purple color of the bon vivant" to the "vinous color," the color of "the large white man with the large white kidney," "the ghastly pallor of chlorosis," the yellow of "jaundice" and "the lemon tint of late malignant disease."

The following concerning the eyes is also of particular interest:

That one eye appears to be smaller than the other may point to internal aneurism. Prominent eyeballs are the most salient feature in Grave's disease. A squint may be but the expression of long-standing error of sight; it may, however, be a symptom of locomotor ataxia, or of a brain lesion. Inequality of the pupils is always serious, and is one of the early symptoms of general paralysis. This inequality may be difficult for you to observe; but you can see a drooping eyelid, and when you do be on your guard. Certainly it may be congenital; it may be the result of an accident, but on the other hand it may point to the gravest brain or cord disorders—as also may a flickering of

the eyes. A flickering of the eyes, especially when an attempt is made to fix an object, is often seen in miners. This condition, the so-called nystagmus, is not permanent, and yields to rest and treatment. One often sees around the iris a yellowish white ring—this is only fat; once, and by some, regarded as important in the diagnosis of fatty heart, it must now be regarded merely as one of the phenomena of life's autumn—the arcus senilis.

As also the following concerning "a slurring speech" and "a sharp, decisive, explosive delivery:"

Police surgeons know this slurring well, and so do the mental specialists. It is often a symptom of that most awful of human afflictions—general paralysis of the insane. Of great moment also is the staccato speech—a sharp, incisive, explosive delivery of the individual words of a sentence. It is one of the symptoms of another grave disease, the name of which I will spare you.

There are also very careful instructions about observing the hands, the gait, the temper and the temperament.

Dr. Taylor, who is a fellow of the Royal College of Surgeons, is fair enough to close by showing that while all such matters are important and should be observed, often the person who is marked for an early grave lives a good long life, while the person who apparently should survive the century succumbs at a relatively early age.

"Twenty Years Changes in Life Insurance."

The secretary and actuary of the Law Union and Crown Insurance Company of London, S. G. Warner, F.I.A., is the author of a paper upon "Twenty Years' Changes in Life Insurance," read before the Insurance Institute of Bristol, and here republished.

Among the most important changes noted by him are the increase in the number of policies in British companies from 1888 to 1906, from 905,068 to 2,397,915 in the ordinary department; and from 9,145,844 to 25,544,045 in the industrial department. In the same time the amount of ordinary insurance in force increased from £442,653,003 to £754,252,481; and in industrial insurance from £83,434,487 to £251,556,107. During the same period there was an increase of only about 25 per cent. of the population.

The average amount of insurance per policy fell during the period, a larger proportionate reduction being found in the average endowment policy. Concerning endowment insurance the writer says:

There is no getting away from the meaning conveyed by these figures. The public has asserted an overpowering preference for the endowment assurance system. The combination of immediate protection with ultimate investment, by which a man sees a

prospect that, given average longevity, the results of the thrift he has exercised will redound to his personal reward, has proven attractive to thousands with regard to whom the time-honored plea to make family provision fell upon deaf ears. To criticise the tendency, much more to deprecate it, would be futile in face of the facts. As we have seen, assurers have selected this method even at the inevitable cost of limiting the amounts of their policies—a circumstance which precludes our attributing the preference to the influence of the agent, because, as a rule, by our modern methods, a larger policy at an equal premium would be more immediately remunerative to the introducer.

It is worthy of note that this large increase in the popularity of endowment insurance has taken place in a country where the commissions are a percentage of the sum insured without regard to whether the policy is whole life, limited payment life or endowment; that is, in a country where, to put it in the money of the United States, the same number of dollars is paid without regard to the size of the premium, whether the insurance is ordinary life, limited payment life or endowment, for each \$1,000 insured.

Mr. Warner does not appear to be so much afraid of the innovator as the average true Britisher is expected to be, for he favors the "uncondi-

"HAPPINESS AND HEALTH INSURANCE."

The latest evolution in insurance is the proposal to form what the prospectus entitles "The Happiness and Health Insurance Company." It is not a jest, but on its face was given out seriously last Sunday by Mrs. Isaac L. Rice, of this city, who is well known in society, ethical and financial circles, best known probably by the semi-successful crusade she made single-handed against useless and preventable noises. This resulted in stopping the tug and steamboat whistling on the city's water fronts and ways, the yelling of hucksters and peddlers, and the blowing of horns and ringing of bells by itinerant pushcarters, knife grinders, etc., on what the police now designate as hospital and exclusive residence streets.

Mrs. Rice will not commit herself as to the details of the proposed insurance company further than to say that she has consented to become a director and this gives it an aspect of seriousness that cannot be overlooked.

Owing to Mrs. Rice's wealth and enthusiasm in her every undertaking, it is calculated to arouse interest as to how the plan may be launched and eventuate.

There is a close analogy between happiness and health, and the title may prove to be an inspiration, an invitation, and an evolution. "You never can tell."

"THE ECONOMIC RELATION OF LIFE INSURANCE TO SOCIETY."

In the address of Frederic H. Calkins, associate counsel of the Fidelity Mutual Life Insurance Company, being the first of ten lectures before the Central Branch of the Y. M. C. A., in Philadelphia, delivered on March 11, and to which reference was made in last week's issue of "The Chronicle," are found the following novel and apt statements concerning the economic relation of life insurance to society:

Economic Relation to Society.

Life insurance in its relation to society is of great economic value. It touches almost every phase of the life of the community in its social, economic, financial, material and ethical life. Its foundation principle is the recognition of the value of each human life and the necessity and possibility of providing indemnification for the loss of such value.

Out of the relations of producers and consumers grow all the many forms of human activity, and it naturally follows that no man is independent of society. Each individual is of necessity a part of the whole body politic. This interdependence gives to

every individual life an economic value and death causes a loss which can only be replaced by another life equally well equipped. Every individual, therefore, owes a duty to himself, his family and society to provide against the burden of the loss which will result from his death. If a man moves from one community to another and leaves behind him unsatisfied obligations, he forfeits the esteem of the community. It is still greater to his discredit if he passes out of this world without making proper provision for the obligations and responsibilities which he created during the period of his life, and which must necessarily extend beyond its duration; for the man who moves from one community to another may still fulfill his obligations, but after death no man can do that which he should have done during his lifetime.

If proper provision has not been made for these dependents a loss is sustained which falls not only upon the family but upon society, or the State. The dependent ones enter the race of life handicapped, and the State loses by the operation. The family, therefore, has an economic demand upon the head of the house for an even opportunity in the race of life, and the State has an economic demand that every man shall do his share, and not lay undue burdens upon it; for what the individual fails to do the State or society must do for him. This is evidenced by the existence of the various public institutions and charitable organizations throughout the country.

In the first place, it encourages frugality and thrift. Human nature is such that it will not as a rule make provision for the future except under pressure. The natural tendency is to spend the income as it is received and trust to the future to provide for its continuance. While this is the general tendency there are, of course, exceptions, otherwise the savings banks would not hold such large deposits of savings. Such savings, however, are purely voluntary and appeal more to the selfish side of the individual, so that if occasion arises for use of the amount intended to be placed in the savings bank the tendency is to say, "I will put in double the amount next time"; so the amount is used, with perhaps the result that only the usual amount, or even less, is deposited the next time, for the same reason, or through inability to save on account of some extra necessary expense. Life insurance requires the payment of the savings at stated times, and the individual becomes accustomed to treat the insurance premium in a similar manner as the interest on a mortgage or a note. The more payments he makes the more valuable the asset becomes and the stronger the desire to retain it.

It is the most effective means of uniting the large numbers of individuals for mutual help. It gathers up the contributions of the many and disburses them as needed. It thus acts as a redistributor of wealth. It assembles the savings of the individuals and enables their investment in a manner to produce a maximum of earning capacity. By its scientific development it enables the payment to the individual of a large principal, no matter whether a few or many payments have been made by him.

One thousand men with \$1,000, each

acting individually, can accomplish no more than one; but combine the capital and greater results can be obtained. Life insurance assembles the individual capital and thereby not only enables the individual to secure greater returns, as already shown, but creates an accumulation of capital available for the development of business and for community improvement. The investments of life insurance companies are to be found in all parts of the country. Municipalities desiring to make improvements and requiring the use of large sums of money for a long period of years find the life insurance companies ready to purchase their bonds. Railroad companies desiring to extend and improve their property can likewise find in the life insurance companies purchasers of their bonds. Individuals desiring to develop their property or business will find the companies ready to make mortgage loans or other collateral loans.

The vital power of life insurance, however, as an economic factor, is the life insurance agent. He is the generating force which gives life and vitality to the business. It has been demonstrated again and again that without the work of the agent the business of life insurance would be of comparatively small account.

ACTION AT LAST.

Although the insurance fraternity has for many years winked at the resolutions passed by the various branches of the Life Underwriters Association, condemning the bad practices of the business, including "twisting," every time a fresh resolution was placed on the records, on account of the failure of the associations to bring about a single conviction, it is not to be expected that there will never be a single exposure.

The Cleveland Association has actually started things, not against an individual offender, but an alleged policyholders' advisory company, whose method of operation is to inspect policies and make no charge unless a greater saving than the proposed fee is made for the policyholder. The plan operates to cause the surrender of a participating policy in one company for a non-participating policy in another company.

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

THE PENN MUTUAL LIFE INSURANCE COMPANY OF PHILADELPHIA

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

WE SHOULD DO LIKEWISE.

(Continued from Page 3.)

tional policy," which is only another name for the "incontestable policy," which is well known in this country, and he also welcomes the policy with "guaranteed surrender values," and says of this:

It has, of course, been found that there is nothing whatever in the principles of life insurance inconsistent with the giving of such assurances from the outset of the contract; and the fact that this is now freely and frankly done has, I am sure, increased the respect in which life assurance is held among candid business men, as it has unquestionably enhanced the value of a life policy as a commercial asset.

He is not of the opinion that the issue of policies without medical examination is likely to become very common or to be very successful, and says of it:

Personally, I confess I think it is rather dangerous work, and I do not expect to see this development of our business even much more than partial and sectional. After all, the healthy man need not fear to face the doctor, and if he is wise he will do so rather than pay for an exemption which is only a concession to sentiment.

On the other hand, the introduction of various "provisions against lapse" ranging from extended insurance to automatic premium loans, meets his full approval, as follows:

The devices adopted vary in detail, but the general principle of making provision that a policy which has acquired a surrender value shall benefit thereby as a protection against accidental lapse is clearly recognized and acted upon. Armed with such an answer, we can look our questioner in the face and satisfy him that our desire to protect his interests and offer him a real safeguard is a fact, and not a mere profession. Here, again, we may surely say that we have gone soundly and safely forward upon the path of progress.

He also makes mention of "fancy schemes" somewhat jocosely as follows:

Probably one of the things which would forcibly strike a man who had known the field of British life assurance twenty years ago, had been absent from it since, and now returned to it, would be the abundance of special schemes of various kinds—what we may broadly describe as "fancy policies." These are of so many kinds that it would be useless to attempt to deal with them in detail, nor is it necessary. One thing which would occur to anyone studying the place occupied by such items in the general returns of business is the comparatively small total they show there, compared with the ingenuity expended upon framing them and making them known. I need hardly say, however, that the actual extent to which they visualise themselves in objective fact is far from expressing their full value to their au-

thors. Their advertising power is considerable, affording, as they do, evidence of the desire of the companies to meet any possible public demand.

Some of the things which he does not like, he especially ascribes to "the presence and influence of the American companies"—forgetting, perhaps, to credit American companies, with most of the innovations which he favors—one of them being "bonus estimates," which he discusses as follows:

I refer to the habit of stimulating the public appetite by glowing "estimates" of policy results. It may be admitted that there was considerable temptation to pursue such a course. The realization of a high rate of interest, and other favorable financial conditions, mostly of a temporary character, had enabled these companies in the past to achieve for their policyholders exceptionally favorable results. Entering upon a new field of competition, already fairly full, they armed themselves with this new and powerful weapon. The result has, I think, been bad, apart altogether from the fact that, for various reasons, the results have often fallen substantially short of the estimates. The method induces an unhealthy condition of the public mind upon the whole question. The realized profit of a life assurance company, the story and record of what it has been able to do for its policyholders, is a fair part of its competitive stock in trade. When, however, an attempt is made, upon the strength of this, to give definite forecasts of so intangible and necessarily uncertain a thing as its future profit, and to make active use of these in the struggle for business, the future is mortgaged in a way which is fair neither to the company nor its clients. It is not possible, in practice, so to safeguard such methods that they will not be understood and interpreted as definite promises; and the result, if it be a disappointment, is to shake public confidence in the business generally. I do not say that this practice is peculiar to the

American companies, although its initiation at least was, I think, theirs. I am discussing it on its merits, irrespective of who may follow it; and I would like to sound a note of warning against it, as a thing which, however specious and attractive it may appear, carries grave dangers in its train.

It is worthy of note in this connection that the British companies have always made use of estimates, but that in recent years they have been driven by the publicity in regard to their actual bonuses, which was required as one of the features of the British insurance law reform of 1870, to make conservative estimates, which have more often been realized than otherwise.

The other evil which he ascribes to America is "Assessmentism," which he discusses in part as follows:

There is, however, a far more serious—what, indeed, I think we may call a typical—instance of the danger, in a business like ours, which may lurk in too eager an attempt to "give the public what they want." I am personally of the opinion that the one serious blot on our life assurance history of the last twenty years was the attack so vigorously made, and for some years so actively sustained, upon the fundamental principles of our business, by the advocates of what is known as the "assessment system." Here, also, I am afraid we must trace the aggression from across the Atlantic, though it is pleasant to recognize that in this struggle our greatest American competitors fought side by side with us.

The last matter discussed by Mr. Warner is "The Agency System," concerning which he says that "there is probably no aspect of our business which has more gravely changed dur-

2nd Vice-President

34 Nassau Street

New York, N. Y.

NOT LIKELY TO COVER INDUSTRIAL INSURANCE.

A hearing upon the bill offered by Assemblyman O'Connor, of Brooklyn, to extend the provisions of section 101 of the insurance laws, to require industrial policies to be submitted to the Superintendent of Insurance for his approval, and to contain all the standard provisions, was before the Assembly insurance committee on March 10, and was opposed by Actuary James M. Craig, and Counsel Wm. J. Tully for the Metropolitan Life Insurance Company. No person appeared in favor of the bill, excepting the assemblyman who offered it, and it is not considered that its chances for adoption are good.

Without compulsion the Metropolitan has included in its regular industrial policy most of the important standard provisions. There are, however, provisions in section 101 which could not be adopted to advantage.

The committee has so far made no report upon this bill; but at the same meeting voted to report favorably upon the bills prepared by Superintendent Hotchkiss, upon which a hearing was held the previous Wednesday.

WE SHOULD DO LIKEWISE.

(Continued from Page 5.)

ing the last twenty years than the agency system." He gives the following picture of the "old-fashioned agent":

He was your accredited representative in a given town—proud of his company, and impervious to the blandishments of any other. He stood by you, and you stood by him. His name and that of the town he lived in were inseparably linked in the minds of the staff. To this day I never hear the names of some English towns without also remembering the name of the agent to whom as a junior I used to address envelopes for my first office, more than thirty years ago. The relationship was a solid and satisfactory one, honorable to both sides.

It appears that nowadays British agents must often represent a number of companies, in other words, are merely brokers, for the following is a description which he gives of the up-to-date British life insurance agent of the present time:

You enter the office of a busy man—and it is decorated with the show-cards of half a dozen offices. He is agent six or seven times over—an amateur broker, in fact. He sends business where he likes and almost on what terms he likes. Your hold on him will at best be a faltering and precarious one.

Concerning rebating, which is a marked feature of the present disorganization in agency methods, Mr.

Warner gives the following whole-some sentences:

Let us not forget what the agency system, even yet, means; and let us decline to challenge to pay each and every individual commission on his own policy. If that principle be accepted, the plain and straightforward course is to lower our rates at once. Our business has been built up on the agency system, it is on the agent that we depend, and to him we must be loyal. A sturdy adherence to this principle is more likely than anything else to bring us back some of the old security and steadiness of relationship.

The change in the method of compensating agents, which is nowadays more strikingly a brokerage method in Great Britain than ever before, is also discussed by Mr. Warner. Originally scarcely more was paid the first year than in subsequent years, and indeed the commissions were extremely low, judged by our modern standards. Already, by 1863, he finds the custom of commuting commissions for an initial payment "had grown up in Germany and when it developed in Great Britain it took the familiar form of 1 per cent. (on the sum insured) and 2½ per cent. (on the premium) on renewals," as against the old-fashioned agency contract which was for 10 per cent. of the premium the first year and 5 per cent. thereafter.

Mr. Warner is not in favor of an increase, either of first year or of renewal commissions, and says of it:

I can only say that the tendency towards higher initial payment—or higher renewal payment instead, which is worse—seems to me to be one of the modern developments on which we can congratulate ourselves least; that, broadly speaking, I believe dear business to be bad business; and that I think a frank and fair agreement on moderate commission rates, and a determination loyally to support each other therein, would, were it possible, be the healthiest change our business has known for many a day.

It is not, perhaps, necessary for "The Chronicle" to observe the same reticence which he has so carefully preserved. The placing of a policy for approximately \$600,000 in Great Britain in 1908, on the basis of a rebate of 2½ per cent. of the sum insured, i. e., \$25 per \$1,000 of insurance, indicates how far afield the British companies have wandered from their original moderation in the matter of commissions, as well as how far they are from living up to the standard set up by Mr. Warner in regard to the protection of agents against rebating.

Very probably the most valuable conserving and restoring force in Great Britain at the present time in this matter of excessive payments to agents—which in that country as in

the United States is frittered away in rebates and usually benefits the agent not at all—is the sturdy and undeviating devotion of the Australian Mutual Provident Society, which entered Great Britain in 1908, to its long-settled practice of paying a commission, equivalent to \$12.50 per \$1,000 of insurance, without renewals, and of dismissing without hesitation or leniency every agent who, upon thorough investigation, is found to be guilty of rebating.

TO TEST FEDERAL TAX LAW.

Among the corporations which are testing the constitutionality of the Federal corporation tax law is one insurance case which has been advanced in the United States Supreme Court.

Francis L. Hine, stockholder and policyholder in the Home Life of New York, has sought to restrain that company from paying the Federal corporation tax, on the ground that benefits to stockholders and policyholders would be impaired by such payment.

The New York Life Insurance Company is a party to another suit, on the ground that inasmuch as that company is purely mutual and holds no surplus profits not belonging to its policyholders, this tax is a direct tax upon each policyholder and that the Government is without power to impose such a tax.

The officers of other insurance companies take the stand that as the policyholders, through State taxation of the insurance companies, are compelled to bear that burden they should not be required to contribute further toward the expense of the Government.

SUMMERHAYS FOUND GUILTY.

E. J. Summerhays, the Chicago insurance broker, charged with using the mails to defraud, was found guilty in the Federal District Court in Chicago last Thursday afternoon. Argument on a motion for a new trial was set for this week, and the defendant's attorney has signified his intention to appeal the case unless a new trial is granted. The jury was out only about half a hour and evidently had reached its conclusions before the trial closed.

The constant effort of the defense was to show that Summerhays secured for his customers valid insurance in solvent companies, as he agreed to do; that the cancellation of the policies for non-payment of premiums was void, because payments of premiums to Summerhays was payment to the companies; and that there was no fraud in Summerhays' failing to pay the premiums to the companies, as he had disputed accounts with them or with the brokers with whom he dealt. When the defendant himself was put on the witness stand his attorney endeavored to show that he was rendered unable to meet his obligations to the companies through adverse publicity given his business and the issue of a fraud order against him which prevented his doing business by mail.

A Fraudulent Scheme.

The Government's contention was that Summerhays' whole system of operations was based upon and in furtherance of a scheme to defraud; that by his plan he intended to get and keep money which belonged either to the assured, or the companies, agents or brokers with whom he dealt; that in furtherance of this scheme to defraud he used the United States mails. The gist of the whole matter was the use of the mails. Judge Landis, in his charge to the jury, made this plain. If Summerhays had a scheme to defraud and worked it successfully, that was a question for State courts to take cognizance of. But if he used the mails in carrying out such a scheme, that was a Federal offense. Judge Landis made it clear that it made no difference whatever that the policies secured were valid contracts, if they were secured as part of a fraudulent scheme.

Brokers Status Not Defined.

As the matter stands now, this case has not apparently done anything to fix the status of the broker. Notwithstanding the constant efforts of the defense to show that Summerhays was the agent of the companies whose policies he secured and that the cancellations were not valid unless re-

turn premiums accompanied them, this question was not one on which the verdict hung. It is possible that on appeal this question may be presented in such a way as to bring this point into the case. The defense followed the theory throughout that the validity of the cancellations was a vital point. Should the Court of Appeals so hold, it might go far to show whether the law recognizes the broker as the agent of the assured or of the company.

It is the opinion generally held by insurance men in Chicago that this case will have an important bearing on the local situation. It will have a salutary effect on those brokers who are writing business all over the country and not paying the companies their net portion of the premiums.

Impotence of Illinois Laws.

Furthermore this case presents new proof of the impotence of the laws of Illinois. It was only when the post-office department got after the wildcat operators about five years ago that anything effective was done in breaking up the practice of skinning the public through selling it worthless so-called indemnity. It remained for the Federal Government to take up this Summerhays case. In this case no evidence was introduced to show that Summerhays transacted any business with assured in Illinois. The assistant district attorney, in addressing the jury, intimated strongly that Summerhays refrained from dealing with Illinois people so that he would not be amenable to the laws of the State.

Two Years' Sentence.

On Tuesday Summerhays was denied a new trial and was sentenced to two years in the Leavenworth Federal Penitentiary. His conviction may result in an increase of caution on the part of the legion of other wildcat concerns, which rely solely on Uncle Sam's postal service to catch suckers. Legitimate insurance seems coming in for its own.

ROCKFORD RATES INCREASED.

The Western Union is insisting upon increases in rates on all the sprinklered risks at Rockford, Ill., on which unauthorized reductions were made last year which have not made the required improvements or cancellations. An agent at Rockford, controlling most of the sprinklered lines, is said to have made the reduction on claims of competition. The governing committee took the matter up in November and demanded that the improvements required to justify the reduced rates, except the supervisory service, be made within sixty days, or the policies be canceled in default of the proper rate. At the end of the sixty days an inspection was made showing that eight risks have not made the required improvements to avert cancellation.

A FIRE CRISIS.

The Commercial Union Assurance Company, Palatine Insurance Company and Commercial Union Fire of New York have resigned from the Eastern Union creating what is considered a crisis in its affairs.

This action was taken because the union adopts strong and aggressive measures to enable union companies to compete upon even terms with outside companies, the latter having, in the opinion of the Commercial Union, too long enjoyed freedom to seduce agents into unequally distributing their more profitable classes of business.

The portrait of Edward F. Beddali, president of the Queen Insurance Company, painted by S. Seymour Thomas, was presented to the New York Board of Fire Underwriters yesterday by the special committee, of which Henry Evans is chairman. It is a decidedly excellent likeness and well worth going to see. It was enthusiastically received by the large number of members present during the noon hour.

Have you seen the new policy of the PHILADELPHIA LIFE?

Agents are certainly writing business under this contract and an opportunity is presented to you to get busy on this. I don't say that there are not other good companies beside the Philadelphia Life and I don't want to disturb agents who are working for other companies, but if you are dissatisfied and are going to make a change, I think the Philadelphia Life is the Company you should be with and make it your last change, because with the Philadelphia Life you can do as much business as you want to do each year and make as much money as you want to make and if you don't make it it is your own fault.

Write PERRY to-day.

PHILADELPHIA LIFE INSURANCE COMPANY.
Philadelphia, Pa.

IN NEW ENGLAND

BOSTON PROTECTIVE DEPARTMENT.

The annual report of the Boston Protective Department for the year 1909 has just been issued, and shows that the receipts of the department during that year were \$102,967, with a balance on hand at its end, after a deduction of expenditures, of \$9,894. The total insurance on Boston property affected by fire loss during the year was \$28,868,079, of which \$22,301,867 was on buildings, and \$6,566,211 on contents. The total property loss was \$2,248,335, of which \$826,199 was sustained on buildings and \$1,422,136 on contents. The total insurance loss was \$1,720,676, whereof \$643,139 on buildings and \$1,422,136 on contents. The direct property losses totalled \$2,100,859, and the exposure losses \$147,476. The annual meeting of the department will take place on Thursday, the 24th inst., when the recommendation of the directors that they be authorized to expend for the maintenance of the department during the ensuing year a sum not exceeding \$105,000 will be acted upon, and officers and directors chosen. The incumbency of Francis H. Stevens, who has most efficiently discharged the duties of president for the past six years, will expire by limitation, and a successor to the office will be chosen.

L. Stewart Jordan.

L. Stewart Jordan, senior member of the Boston insurance firm of Jordan, Lovett & Co., passed away Monday night, at Young's Hotel, where he had been living since the death of his wife. Mr. Jordan was in his 70th year, and probably the dean of the "street," having begun as a clerk in the office of his father, W. H. S. Jordan (and a great insurance man in his day), way back in 1857. Mr. Jordan had many lovable, companionable traits; also a fund of historical lore relating to the past half century in the New England metropolis, and many devoted friends will mourn his loss.

The New England Casualty Company.

The New England Casualty Company of Boston, which was recently reincorporated under the laws of Massachusetts as a stock company, has established its headquarters at 4 Liberty square, and its officers are: Corwin McDowell, president; Guy W. Currier, first vice-president; Thomas K. Cummings, second vice-president; Allen Forbs, treasurer; M. E. Cough-

lin, secretary. The board of directors comprises some of the most prominent people in the business affairs of New England. Among them are President Vail, of the American Telephone and Telegraph Company; President Mellen, of the New Haven Road; President Tuttle, of the Boston & Maine; President Preston, of the United Fruit Company, and Treasurer Dumaine, of the Amoskeag Mills. The whole list may be characterized as representative of leading financial, manufacturing, commercial, legal and railroad interests. Mr. McDowell, president of the company, has received an academic and legal education, and has been identified for the past eleven years with the New York Life, mainly as manager of one of its Boston branch offices. He is a wideawake and pushing young man, and under his guidance a successful career may be expected for the New England Casualty Company.

New England Mutual Life Issues "Agency Bulletin."

"The Chronicle" has been favored by the New England Mutual Life with a copy of No. 1 of its "Agency Bulletin," which, as explained in the foreword, "will be devoted to bringing facts to those of our agency force who are looking for them. It will counsel and advise, and endeavor to set forth the good and true method that will be helpful in the presentation of life insurance." Other laudable purposes are outlined, and the make up of the first number is such as to justify the fullest confidence that they will be fulfilled. It contains, among other things, an article on the 75th anniversary of the company, which will be reached on April 1 proximo; another on the protection of business by life insurance, and an array of suggestive facts from the company's latest annual statement, all of which redound to its credit. There is also a record showing the remarkable persistency of policies in the New England Mutual Life.

Manipulated the Books.

It came to light at the end of last week that Oscar M. Wheelock, formerly chief accountant of the Massachusetts Bonding and Insurance Company of Boston, had absconded in January leaving behind him a shortage of something under \$10,000. The discovery that Wheelock's accounts were wrong was made by the Massachusetts Insurance Department, in the course of its examination of the company last January, and when Wheelock was called upon to explain he disappeared. When the examina-

tion of the company had proceeded far enough to ascertain the probable shortage, the company, at the suggestion of the department, charged off \$30,000 from its assets, and its recently published annual statement was made with that deduction. The Massachusetts Bonding suffers no financial loss, as Wheelock's bond, placed in a reliable company, more than covers the amount abstracted. As President Falvey remarked to your correspondent the other day: "Of course, we don't enjoy this sort of thing happening, but it surely shows the necessity and value of bonding insurance."

Fire Apparatus Stays on Main Street.

The hearing at Boston City Hall last Thursday afternoon on the proposition to remove the fire apparatus, now located on Mason street, to Park square, was short and eminently satisfactory to the business men and underwriters interested in having it stay. Mayor Fitzgerald simply asked those in favor of the proposed change to stand up, and nobody stood up. He then asked the same of those opposed, and everybody stood up. He then announced that the location would not be changed, and was given a vote of thanks. After the hearing the Mayor and schoolhouse commissioners considered a plan, whereby the Mason street property could be sold for the benefit of the city, and still retain the desired protection, by means of a proviso that, in any building to be erected on the site, a space should be reserved on the ground floor for the fire apparatus. This solution of the difficulty had already been suggested by W. E. Davenport, Boston agent of the Aachen and Munich, before the hearing took place, and whether it was a coincidence of thought or whether it got conveyed to Mr. Fitzgerald will probably forever remain a mystery.

AGENTS WANTED
AT UNREPRESENTED POINTS.

TELLING A SECRET.

According to a statement which appears to be based upon facts, the Chicago Board of Underwriters within a few days has been obliged to appeal to the insurance interests not to weaken its organization by hiring away its inspectors and raters. Last week one of its sprinkler inspectors went to one of the companies and a rater went to one of the local agencies as inspector. It was reported that other similar deals were in prospect and the board found that it was likely to be left so short of expert help that it would be unable to handle its work properly, so it arranged to have changes deferred until it could find new men to take the place of those who desired to leave.

This is only an illustration of the scarcity of good special agency, inspectorship and rating talent, which already has been referred to. Several very desirable special agency positions are now standing open in the West, with no immediate prospects of their being filled. Large city agents see the need of having at least one expert inspector if they would hold their special hazard and sprinklered business against better equipped offices.

More companies are paying special attention to improved risks. This all means a call for men who understand rating and inspecting, and the men have not been educated fast enough to supply the demand. The rating bureaus have furnished so many men for the service of the companies, to the detriment of the bureaus themselves, but they apparently do not train enough. So few local agents will go to the trouble of learning how to apply the analytic schedule and perfect themselves in inspection work that eligible material for special agency work is scarce among the locals. It is a big problem and the solution is not yet in sight.

However, it is clear that the board overlooks the secret of its loss of men. It simply don't pay enough money to hold them, and these men are not working for their health alone.

REDUCING THE FIRE WASTE

Commissioner James V. Barry, of Michigan, is conducting an investigation of fire insurance rates, commissions, expenses and underwriting methods, and the National Convention of Commissioners is expected to wait for his report before recommending action to their legislatures. Several of the more influential members are taking the stand that the proper method of reducing fire insurance rates is by reducing fire waste. In Kansas the whole question of the right

of the State to dictate as to what shall be charged by private corporations is to be fought out in the courts, while in Texas the operation of the State rating law is fastening public attention on the economic features of the fire waste problem.

If the agitation serves to bring people to a realization of the enormous fire waste, it will have accomplished a great economic benefit. In Texas and Ohio improvement is already noticeable and in view of this fire insurance company officials are disposed to accept it, so long as it is administered in a fair, impartial way.

NEW ENGLAND BREVITIES.

Week end fires of serious destructiveness have been the rule in Boston all the month. A fire loss aggregating some \$400,000 was sustained Saturday afternoon in the supply plant of the Boston Elevated Railway Company at 49 Albany street. The loss will be covered by a blanket insurance, placed by John C. Paige & Co., which covers all the elevated property, and aggregates some \$11,000,000. A sad result of this fire was the death of Captain Lanegan, one of the bravest and most efficient men on the fire force, who was struck by a falling wall.

At next Saturday's meeting of the New England Exchange, the adoption of lumber rates recommended by the executive committee at the meeting of March 5, will come up for action; also an amendment of article III of the constitution, and a substitute to take the place of article V of the by-laws.

The Massachusetts Bonding has appointed G. R. Griffin & Co., of Boston, as agents of its burglary department for the Metropolitan district.

The prosperous Boston agency of Kaler, Carney & Liffler has again been obliged to enlarge its quarters by securing additional space.

Kollock, Rice & Co. have been appointed Boston agents of the Franklin Fire of Washington, under Edmund Winchester, manager for Massachusetts.

The Massachusetts Accident Company has been admitted to Michigan, with E. M. Hopkins, of Detroit, as State agent.

The Central National Fire, of Chicago, has been admitted to Maine and to Connecticut.

The Phoenix Preferred Accident, of Detroit, has applied for admission to Massachusetts.

OTHERS WOULD LIKE TO KNOW.

United States Manager Case, of the London Assurance Corporation, will address the members of the Insurance Society of New York at its next meeting, which will be held on the 22nd inst. Full attendance is to be expected. It is not quite fair that Mr. Case should confine his subject entirely to fire insurance, for men in all lines of insurance, not excepting insurance journalists, will be interested in knowing "What a Fire Insurance Man Should Do to Get His Salary Raised."

SECRETARY SCHICK RESIGNS.

Charles E. Schick has resigned as secretary of the Federal Union Surety Company of Indianapolis. He has not announced plans for the future, but it is understood he has several propositions under consideration. He has contemplated a change for some time, and it is possible he may make an agency connection. His successor has not as yet been announced.

It is thought this is the preliminary move to a complete change of control and reorganization of the company, rumors of which, and its entry into multiple lines, have been rife for about a year past.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

TRUST COMPANIES AS INSURANCE AGENTS.

Last week Fred W. Kiefer, resident secretary of the North British and Mercantile, made the following statement before the "Smoke and Cinders" Club, composed of fire insurance men, on the subject of trust and bonding companies and incorporated agency companies doing a general insurance brokerage business. It is of especial interest to a number of "The Chronicle's" readers and may prove to be a guide post:

Trust Companies as Brokers or Agents.

The question of the right of trust companies to transact an insurance business, was recently submitted to a prominent firm of corporation lawyers, and after careful investigation and conference with the banking and insurance departments, this firm gave as its opinion that such institutions could not act as brokers and place insurance on property for others or in which they are not interested, and receive a commission thereon either directly or indirectly without violating both the banking and insurance laws of the State.

This is in harmony with the opinion of the Attorney General of Ohio who declares, "That soliciting insurance as agent and writing fire insurance could not be united with a banking corporation incorporated under the Thomas law (under which trust companies are incorporated) may have in order to carry into effect those powers expressly granted to accomplish the purpose of its creation."

Incorporated Agencies.

The question of incorporated agencies where any number of individuals join to transact an insurance business under a license issued to one member of such an agency was recently submitted by the president of a prominent incorporated agency to his attorney, and, after going over the matter, and advising with the State authorities, he was advised that to comply with the law, each member, officer and stockholder of such company must be licensed.

If this is true of corporations chartered to transact an insurance business, must it not be so in a greater sense of a bank, trust company, or other corporation whose corporate rights do not include those of soliciting and writing fire insurance.

This is liable to severely jolt some of the executives who have formed agency corporations to conceal their connection therewith, putting some relative in command, but in reality directing the wheels. There are several which the insurance reform movement, which has been sweeping the country, has not eliminated.

Further on in his talk, Mr. Kiefer touches upon another very live topic of great interest as to the insurance broker.

In Pennsylvania the insurance bro-

ker is defined by law in the following words:

Whosoever acts or aids in any manner in negotiating contracts for insurance or reinsurance, or placing risks, or effecting insurance or reinsurance for any person other than himself, receiving compensation therefor, and is not an officer, member or agent of the company or companies in which such business is effected, shall be deemed to be an insurance broker.

In defining this law, the newly appointed Insurance Commissioner of Pennsylvania under very recent date, declares:

"Under the laws of this State, the agents of Pennsylvania companies can be commissioned direct by the companies, but a certificate as agent does not protect a broker who solicits insurance and has policies written by the company. Such a solicitor is acting as a broker and must have a license as such. Where a man goes out and solicits risks and receives a broker commission, although he places the business with a local company, he must have a broker's license."

Another declaration of the Insurance Commissioner, and published very recently will be of interest to real estate and insurance agencies:

"We have held that where an agent or firm of agents employing clerks on salary and sending them out to solicit risks for the agency, the clerks are acting as brokers and must have licenses."

He qualifies this by saying further: "Whether it is called a commission or a compensation or a gift, or whether it be a fixed sum or a percentage of the premium does not in my opinion affect the status of the transaction at all."

While these declarations may sound drastic, they come from one who is thoroughly informed regarding the insurance laws.

Who Does the Broker Represent?

Is the broker the agent of the as-

sured or of the company? The standard form of policy in many States contains this clause:

"In any matter relating to this insurance, no person, unless duly authorized in writing shall be deemed an agent of this company."

Under this provision the companies seem to place the responsibility of the acts of the broker upon the assured. It is hardly unreasonable that the assured should regard the person that solicits, quotes rates, negotiates, secures and delivers policies, collects premiums and is remunerated by the company allowing him a percentage of the premiums, as acting for and being an agent of the company.

It seems that this is the only provision of the policy to which the courts have refused recognition. According to its terms, and from the conflicting opinions and decisions, it would appear that the actual standing of the broker in his relation to the company and assured is rather uncertain and the practice of serving cancellation notice on the broker for the assured is somewhat questionable as to its legal effect as is also the serving of notice of cancellation to the assured on account of unpaid premium, the premium having been paid the broker by the assured.

FIRE LLOYDS AGAIN.

The recommendation of Insurance Superintendent. Hotchkiss, of New York, in the form of a bill which is pending in the Legislature and which was printed in full in last week's issue of "The Chronicle," concerning the operations of the Lloyds in particular, gives renewed interest in the recent report of the department, out of which the recommendation was based and which was made after a somewhat extensive inquiry into Lloyds methods of underwriting.

The report goes into the history of Lloyds insurance, particularly the statutes affecting the same and the official investigations previously made.

The report includes a short sketch of the parent institution, Lloyds, London, and a history of Lloyds in New York, with particular reference to the effect of the legislation of 1892 which, though intended to limit these associations, really resulted in their increase. The Richard-Sherer and Edgcomb investigations of 1895 and 1902 are referred to and a summary of the laws of 1903, 1905 and 1909 affecting these institutions and of the Attorney General's opinions concerning, as well as the legal proceedings at various times ordered or taken against them, is given. The individual histories and present financial condition of the Lloyds and inter-insurers now doing business in New York are given, each being captioned by a summary giving the important facts concerning their organization, changes in name, legal proceedings against, if any, premium income in 1908, and the amount of insurance in force at the end of that year. There is included also a summary of the views of the Superintendents and Commissioners of Insurance of the different States as to Lloyds insurance in such States.

Appended to the report are copies of affidavits obtained in connection with the organization of the Lloyds in the early 90s, opinions by Judges Russell and Truez in the Locw and Abell cases, the leading Lloyds cases in this State, sections of the insurance law applicable to Lloyds and the opinions of the Attorney General on this subject in full.

The report has been mailed to members of the Legislature and to Insurance Commissioners of various States, as well as generally to officers of insurance companies.

It seems certain that the department is going to be wide awake as to the concerns and so-called agents and brokers which use the good name Lloyds to conjure with.

STRIKE INSURANCE.

The great strike now on in Philadelphia and which threatens to spread to indefinite bounds, which the leaders claim will shortly include all the labor unions of the United States, brings forcibly to mind the matter of insurance against these strikes and the resultant loss to both employer and employee.

It is interesting to note from the report of the American consul at Brunswick, Germany, how the subject is handled there by the 48 strike indemnity companies which he classifies as follows:

Thirteen strike indemnity insurance companies, twenty-six employers associations for strike insurance and nine in which indemnity is from occasion to occasion granted. The company of United German Employers' Association for Indemnity for Loss by Strike is a reinsurance company, and comprised twenty membership companies in 1908. The number of workmen employed in the industries insured was 411,028, and the sum of yearly wages amounted to \$111,090,305. During the year claims to the amount of 525,318 men's days were presented, chiefly from the metal industry. The amount of indemnities paid in 1908 was \$26,520. The association closed the year with a large surplus.

The conditions under which a strike indemnity is paid is different in the several companies. Assistance is granted in the case of strikes and generally in lockouts. But this is subject to fixed conditions, the most important of which is that the stoppage of work has not been produced by the fault of the employer himself.

The whole institution is still in its infancy, but the number of its adherents increases from year to year. The fact that it strengthens the position of the employer against the attacks of labor is evidenced by the dimin-

ished number of strikes, with their unhappy consequences.

There is a big opening for the credit insurance companies to open this line in America. The conditions now existing are extremely favorable.

THE MICHIGAN REPORT.

The report of the Insurance Department of Michigan shows that there were 130 fire insurance companies of other States to 37 foreign companies, to three local stock companies doing business in Michigan in 1909. Of the taxes collected the Michigan companies paid nothing; the companies of other States, \$175,961; and the foreign companies, \$56,210.

GETTING WARMER.

The remarkable and sudden developments, announced in last week's "Chronicle," indicated by the entry of the Maryland Casualty into surety lines and the entry of the United States Fidelity and Guaranty Company and the Fidelity and Deposit into casualty lines, making the home town of these three a sort of storm center, is very much more greatly complicated by the National Surety Company of New York shying its castor into the ring.

Two or three of the minor concerns have recently talked about and looked longingly at the multiple field, but had neither the general to lead the way nor a financial exhibit that would attract an able man. But the trend has all been that way and now that the big ones are in the running it is one best bet that something will be doing—not now, but soon.

There was an unfounded item printed by some journal last week that the American Surety would also enter, but President Lyman's unqualified denial puts an effectual quietus on the report—for the present at least. The trend of events may compel its falling into the multiple lines to save its single line agencies and business.

United States Manager Ising also stoutly asserts that the Ocean does not intend any subsidiary corporate organization through which it could get around the inhibition in the State and Federal statutes against other than domestic companies as sureties.

Vice-President Whelan Talks.

By some it has been thought that the change in the Fidelity and Deposit Company is a retaliatory measure on the Maryland Casualty Company, which has been seeking to have its charter amended so that it may enter the surety field. In commenting upon this Vice-President Thomas A. Whelan informs "The Chronicle":

"The proposed amendment to our charter is not, in any sense, retaliatory. The Fidelity and Deposit Company is absolutely in accord with the Maryland Casualty Company, and the most pleasant and cordial relations exist between the two companies and their officers. This statement is true as regards the United States Fidelity and Guaranty Company also."

Mr. Whelan, who is also a director in the Maryland Casualty, further explained that the Fidelity and Deposit sought a change in its charter in order to have the same powers as other companies organized, at a later date. He also said that since the Fidelity Trust Company of Baltimore had taken over the banking business of the Fidelity and Deposit, the latter no

longer conducted a banking business. A change of name is accordingly proposed, substituting the word "Surety" for "Deposit," making the name of the company the Fidelity and Surety Company, which will indicate more accurately and exactly the character of the business done by the company and remove a now misleading word from its corporate title.

"We have conducted the surety business for twenty years," said Mr. Whelan, "and initiated and developed many of its present lines, believing in a widely distributed liability, and this may, largely, account for the splendid success of our efforts. The same rule, I believe, applied to casualty lines, will insure similar success."

"This matter has been in our minds for several years and we have simply awaited the convening of our State Legislature in order to execute our plans."

Employers Liability Field.

While the general development of surety and casualty business has contributed greatly toward this influx of new entries in the field, it is reasonably certain that the coming flood of employers liability business has been the main incentive. Every considerable State has under consideration a revision of its liability laws.

On Tuesday the Wainwright Commission appointed by Governor Hughes, of New York, to formulate a revision announced at Albany that after a patient and exhaustive research and the holding of open meetings in the principal cities of the State, its report, crystallized in the form of a proposed statute accompanying, would be submitted within two or three days.

The recommendations of the committee will include a workmen's compensation act, covering persons engaged in hazardous occupations; an optional compensation act, to cover all other trades, and the strengthening of the employers' liability law generally. Bills having these provisions will be introduced by Senator Wainwright and Assemblyman Phillips, two members of the commission.

The compulsory act, it is said, will provide that in case of death the compensation shall be \$3,000, which is twice that allowed by the English law, in case of injuries the compensation is to be at the rate of \$10 a week while the disability lasts, and in the case of total disability it is to be on a basis of \$10 a week for ten years.

In case the employer elects to waive the optional act he is to be governed by the general employers' liability law, which is to be greatly strengthened in

favor of the employee. The commission now intends to take up the causes of accidents incident to employment and their prevention.

This gives but a faint idea of the tremendous development immediately ahead for the liability underwriters.

A WIDE PROSPECT.

The surety companies are particularly interested in the postal savings bank bill, which has just passed the Senate and is now pending in the Lower House of Congress, due to the fact that every bank used by local and branch postoffices for the deposit of receipts will be required to give a special bond. This would mean a large volume of new business in depository bonds, reaching into the nearly seventy-five thousands of postoffices, in addition to the heavy staff of employes that would be necessary to administer such a large and widely distributed banking system and its depositors.

The idea of this may be gathered from New York City postoffice alone, where there are about seventy-five branches, and each of these branches has "stations" in practically half of all the drug stores in its boundary. In Manhattan Borough alone there are 1,250 drug stores, and it is pretty certain that Brooklyn and the other boroughs have an equal number. From this it will be seen how ramified is the postal system, and, as about the same conditions exist throughout the United States (in the ratio of population) the subject looms large on the horizon.

The proposal should, in the ordinary course of events, look very good to surety agents.

FOR LIABILITY LAW.

The first meeting of the recently appointed committee of the National Civic Federation on compensation for industrial accidents and their prevention was held last Friday at the Metropolitan Life Building. August Belmont presided. There was a large attendance of members representing the various industries. The object of the committee is to urge a uniform employers' liability law in all the States.

On motion of E. W. De Leon, president of the Casualty Company of America, this resolution was passed:

This committee declares itself as unequivocally in favor of a new and more comprehensive system of compensation for industrial accidents.

Otto M. Eidlitz and Colgate Hoyt were appointed, with Mr. Belmont, as a committee to select sub-committees to adopt plans for furthering the movement. They chose one for drafting a plan of compensation that can be enforced by law, with P. Tecumseh Sherman as chairman. The other sub-committees are on statistics and cost (consisting of Sylvester C. Dunham, Hartford, Conn.; W. C. Faxon, John Mitchell, Launcelot Packer and Ralph M. Easley, and a committee on State

factory inspection, consisting of State Labor Commissioner John Williams, Louis B. Schram and W. I. Saunders.

The temper of the meeting indicated that it is the earnest purpose of the Federation to pursue this subject vigorously, and the presence of several of the eminent accident insurance people further indicated the intention to work out an equitable plan. It is a great step toward the elimination of avoidable poverty and its toll of crime.

THE STEAM BOILER HAZARD.

The 1909 record of reported boiler explosions as furnished "The Chronicle" by the Hartford Steam Boiler Inspection and Insurance Company, sheds an interesting light on this neglected employers' liability hazard and gives good campaign material for the wideawake agent and solicitor.

This is the record for 1909: Number of explosions, 550; number killed, 227; number injured, 422.

The enormous increase of installations of steam and hot water low pressure boilers for heating apartment houses, hotels and residences, public and other, and, in fact, every class of modern buildings, calls for indemnity to the owner, not only against his own property damage, but against his public and other liability as well. One of the older of the casualty companies has recently inaugurated a monthly inspection system for these so-called low pressure boilers in residences, based upon the experience that when their safety valves get rusty and the attendant is visiting for the evening explosions do occur. It is very much on the order of the so-called fireproof buildings that are reported nearly every day as having been destroyed by fire.

The entry of several big companies into the multiple casualty lines, including steam boiler, will probably liven things up a bit in that line and develop some fresh ideas of interest.

NERVE.

Last week's issue of "The Chronicle" gave briefly the story of the meeting of a number of liquor dealers on the day before issue, at which violent protests against the bonding system of the surety companies, as related to excise bonds, were made. The account was tame compared with the later one of the "New York Journal," which is of sufficient interest to surety companies generally to be reprinted in full.

The Committee of Fourteen has proven its reason for existence many times, but never so sharply as is indicated in this howl from the minions of Satan. The credit for this work is largely due to the personal activity of Dr. John P. Peters and Frederick H. Whitin, chairman and secretary respectively of the "14," the real heat and burden of which has fallen upon the latter, and to whom all commendation is due for the fearless way in which he has faced these dangerous and murderous elements, who would not hesitate an instant at any form of crime.

The "Journal" article follows, with its principal highly descriptive heading: **DIVEKEEPERS IN PACT TO VIOLATE THE LAW.**

One hundred divekeepers, at a secret conference on Wednesday, at the Plaza assembly rooms on Fifty-ninth street, formed an organization to enable them to violate the law.

As boldly expressed at the gathering, the purpose of the resort owners is to counteract a crusade initiated against them three years ago by the Committee of Fourteen, of which the Rev. John Peters is chairman and Congressman William S. Bennet is a leading supporter.

Within the last few months the divekeepers have become alarmed. Frequent raids as a result of the activity of the Committee of Fourteen, with, in many instances, the revocation of licenses as a climax, have spread terror among them. While they had gone along for years, secure in the protection the Raines law gave them, they discovered, some time ago, with the Committee of Fourteen attacking them, that some radical step must be taken if their existence was to continue.

The Committee of Fourteen struck at the foundation of the dive evil when it took up an agitation against the bonding of resorts by various surety companies which, for years, had had a rich revenue from that source. The committee found that owners of the vilest of dens were able to obtain the \$1,800 bond required by State law from all saloonkeepers. Any saloonkeeper, whether his place was classified as eminently "decent" or of the most vicious type, was able to get a responsible surety company to put up the \$1,800 bond and the cost to all was nominal.

Forced to Pay Heavy Tribute.

After the committee got to work with its crusade seven of the bonding

companies withdrew their support of the divekeepers, leaving but one that now panders to that trade. The resort owners, as a result, have been compelled to pay heavy tribute to get the requisite bonding. The surety concern exacts cash deposits of anywhere from \$750 to \$1,800 from the dive-owners, according to the character of the place operated. In no few cases, after raids and convictions, these bonds have been forfeited.

All this has had the effect of creating nothing short of a panic among the resort keepers. There are 350 of them on what is called the "black-list" of the Committee of Fourteen. These men run places of the lowest type.

Wednesday's conference of these keepers was called at the instance of a former agent for bonding companies which had catered to the resort element.

Suggests a Bonding Company.

The organizer, a shrewd-looking fellow, wearing heavy-rimmed eyeglasses, presided. What was wanted, he explained, was a bonding company to be made up of the resort keepers, which would take the place of the concern levying such heavy tribute. It was time to wage desperate war on the elements which were trying to sound the death-knell of the dive men, he said, and it was up to the resort owners to take up the cudgels.

"That's right," responded a Bowery saloonkeeper. "There's no use letting them get ahead of us. We are violating the law—no one denies that—and we have got to fight to keep them from driving us out of business. It's a fair fight."

A murmur of applause passed over the conference. The chairman went on to explain the details of the proposed organization. The dive owners, he said, would have to get up a fund of \$150,000 to start it. Of this \$75,000 would have to be deposited with the Secretary of State, and it would be necessary to have another \$75,000 to invest in securities before the bonding company could come into existence.

"But how are we to get a charter from the Secretary of State?" demanded one dive owner.

"That's easy," was the reply. "I have already made up a list of dummy incorporators. The Secretary of State won't know that the saloonkeepers are behind it. We can get our organization going, and then there won't be any trouble."

To Work at Albany, Too.

The conferees were assured that with their own bonding company no dive could be kept from doing business. As fast as a bond was forfeited the convenient organization would supply another.

The chairman informed the conference that not only would the organization be of inestimable service in supplying bonds for dives, but that it could probably do some telling work among legislators at Albany.

After a full discussion of the advantages to be derived from a stubborn fight against the Committee of Fourteen, the conference voted to organize itself into the Hotel Men's Protective Association, with the former

bonding company agent as temporary chairman.

The conferees were assured that plans would go ahead for the incorporation of the dive owners' bonding company, and that the papers would be ready for their scrutiny at a gathering to be held next Wednesday.

The idea is to have the chief dive owners purchase from \$5,000 to \$10,000 of the stock of the new concern. The others will be asked to buy as much as they can afford. Some of those at the conference pledged themselves to take \$5,000 in stock at the start and to make further purchases if necessary.

There is a recent saying that runs something about the chance of a celluloid dog chasing an asbestos cat through Hades, and it might well apply to the chance of organization of this proposed excise bonding company, for the simple reason that its sponsor is highly disrated, has been arrested several times for his operations in excise bonding matters, and because these divekeepers will not collaborate or co-operate, as has been proven in several previous efforts along the same line, due to mutual fear and distrust of each other, combined with the known hazards of such an undertaking.

Vice-President Marshall of the Union Central Life Insurance Company, of Cincinnati, Ohio, sailed last Saturday for Europe, where he expects to remain for about three months.

JESSE R. CLARK, President.
ALLAN WATERS, Sup't of Agents.

BLOUNT TO TAKE AGENCY.

The opening of an insurance office in Chicago by Fred M. Blount & Sons has caused considerable comment in the insurance district there. Before Mr. Blount's connection with the Illinois Surety, from whose presidency he recently retired, he was for many years a banker. For a long time he has been prominent in Republican politics in Chicago and has a very large number of acquaintances and much influence. It is stated at his office that the firm will not be brokers, and the question naturally arises of what companies it will secure the agency.

Rumor has named one company which writes several casualty and surety lines as one which may change its Chicago arrangements, but as yet no definite announcements are forthcoming. It is not even known whether or not the ex-president will confine operations to surety business or go in for fire and casualty lines in addition.

Mr. Blount, owing to his experience as executive, will no doubt be a formidable competitor, in surety circles especially, for political business.

A LIABILITY DEADLOCK.

There is disappointment among some of the liability men in Chicago that it has not been possible so far to get an agreement on automobile liability rates. Negotiations to this end have been in progress for some time. The season is now opening and it is high time there was uniformity of rates if there is going to be any, but the agreement apparently has been thwarted by the dispute between the Travelers and the Employers Liability in the East over commissions. While many offices in Chicago have paid brokers 20 per cent. for automobile liability insurance, the sentiment was quite prevalent among managers that this was a mistake, and that the figure should have remained at 15 per cent. The branch office of the Travelers has no authority to change the company's brokerage scale of 20 per cent. without instructions from headquarters, although the local manager has shown every desire to co-operate. Because of the position of that company the brokerage rate never got beyond the discussion point. It is understood all offices in the city were ready to agree upon insurance rates, except the American Fidelity, which has its own rates. The Employers Liability, however, insisted upon the fixing of the brokerage as a condition precedent to its permitting its general agent to enter the local agreement. As the Travelers

has not consented to change its scale, the matter appears to have come to a standstill for the present. It is not likely, however, that efforts to get together on automobile rates and on other matters will be given up, as the need of co-operation is too evident and some of the managers are too much in earnest about it.

CASE OF VAN LANINGHAM.

Following "The Chronicle's" exclusive announcement a few weeks ago of the abandonment by Van Laningham of his New York venture and sudden departure for the greener pastures of the Pacific Coast, comes a wire from F. B. Lloyd, president of the Pacific Surety, concerning a two-page article in the "Underwriters Report" of San Francisco, connecting Van Laningham and the Pacific Surety's proposed increase of stock by the salesmen method, in which he denounces the article and its motive in language that cannot be misinterpreted.

Mr. Lloyd wired that he had mailed a full statement, but it had not time to reach this issue, and it is hoped to produce it next week, and will probably be of considerable interest to the whole surety world and the insurance commissioners convention.

A FIRE RISK FOLLY.

Wooden shingle roofs are one of the chief causes of conflagrations in the United States, says "Insurance Engineering," in its present issue. They abound everywhere and are constantly ready, like a powder magazine, to spread destruction on being ignited. They represent one of the greatest follies committed by the American public. The list of conflagrations to their credit is almost as long as that of general fires due to unprotected window openings. Apparently no distance is too great for them to be an important factor in spreading a fire in all directions. When the roof of a building is on fire, what chance is there of saving the building? How soon after the fire starts will it be discovered? Who will be likely to notice it first? If there is a high wind, how long will it take for embers to start other roof fires? Who will be the first to discover these fires? If the roofs of ten buildings, or fifty buildings, scattered in all directions, are burning at one time, what chance is there that the best fire department will prevent a general conflagration? Will a general conflagration be confined to the first city, or will other communities several miles away be menaced by embers carried by the wind? These questions are forcefully answered by the compilation of "roof conflagrations" printed in this number of the "Insurance Engineering," notably the conflagrations in the past year or two in Chelsea, Dallas, Fort Worth, Greenwich, Milton, Monticello, New Orleans, Manchester, Rochester, Sanger, Tampa and Three Rivers. Burning roofs mean combustible roofs. Roof fires often mean delayed alarms of fire. Many roof fires at one time mean a demoralized fire department and probably a general conflagration. The cheapest roof is one that will resist fire. If it is capable of helping to confine a fire to a building in which it originates, so much the better. If a roof is strong enough to resist the destructive effects of falling bodies, as when the wall of a higher building collapses during a fire, then it is a better barrier against the ingress of fire than a wall with unprotected windows. Roof openings, such as skylights, are about as bad as floor openings. If unprotected, fire starting in another building may easily communicate through them, as in the case of the fire of December 2, in Hopkins place, Baltimore. Skylights should have metal frames and be glazed with wireglass, except over standard elevator shafts, where plain glass with separate wire screen protection is preferable to permit the

shaft to be used to vent smoke from a fire. Old thin glass skylights may be protected by a wire screen in the manner recommended by underwriters. There is no device that will protect property owners twenty-four hours of the day against delays in the discovery of fires on roofs except a roofing material that will not support combustion.

Fred S. James & Co. have been appointed United States managers for the Campagnie d'Assurances Generales of Paris, the oldest French insurance company. This company has been doing a small surplus line business here and now expects to conduct a general agency business. It will make the required deposit of \$200,000 with the State Department, and \$300,000 with trustees.

President Henry Evans has been living such a strenuous life in his Dewey-like performance in bringing order out of the threatened chaos in the Phenix fire affairs and his successful rescue from the powerful prayers that he has been medically directed to put on a lower speed controller, go to Europe for a rest, and cut all cables behind him.

Mean Reserves, Life, Limited Payment, Endowment.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.

Curtate Summations of D Column.

Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:

Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:

Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.

By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:

Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:

Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:

Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:

Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:

Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.

Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.

Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.

Surrender Values.

Dividends.

For these purposes the "select and ultimate" will be most useful.

Evidence of Legislative Graft.

On Friday of last week a departure was made by Hon. William H. Hotchkiss, Superintendent of Insurance, from the previous practice of his department, in the matter of taking testimony relating to insurance companies and insurance affairs. This departure consisted of conducting the examination in public, so that by means of the newspapers the testimony is made public virtually as rapidly as it is taken.

Prior to the amendments of the insurance laws, obtained as a result of the investigation by the Armstrong Committee, the power of the superintendent to examine was confined to "the officers and agents of any such corporation and its books, with reference to its business" and the corporation, its officers and agents could be required to "produce its books and all papers in its or their possession relating to its business or affairs." The Armstrong laws added to this the power to examine under oath "all persons deemed to have material information regarding the company's property or business" and also that "any other person may be required to produce any book or paper in his custody deemed to be relevant to the examination."

Not Much Used Until Now.

These increased powers had not been made much use of until the present time, excepting possibly in obtaining light on some matters in connection with the examination of a company such as, for instance, during the recent People's Mutual Life Association embroglio at Syracuse; but in the investigation which was commenced last week and is now going forward, this power has been made use of to require various officials of the Board of Fire Underwriters to appear before the superintendent and

testify as to its affairs and also to require various persons who were familiar with what had been done, but who were not officers, to appear and tell their stories.

In consequence of this, a sensation much like that which was created by the disclosures of political and legislative corruption while the Armstrong investigation was in progress, has been produced; and, while up to the present time most of the testimony has shown merely that a general condition, such as was already known to exist in regard to life insurance legislation, has also existed as regards fire insurance legislation, there are not wanting indications that individuals will be found floundering in the net before the fishing has closed.

Origin of "Phony" Bills Disclosed.

The expenses refer particularly to certain queer bills which have from time to time made their appearance in Albany, apparently with the direct intention of holding up the fire insurance companies and requiring them to pay money in order to escape grievous and burdensome statutory requirements or provisions.

In addition to these, however, the investigation is turned upon the funny—indeed "phony"—amendment to section 22 of the insurance laws, which was made in 1904, under which, upon the reinsurance of excess lines in fire insurance, the ceding company would still be held for a part of the reserve, while the company taking over the business by reinsurance would only be held for the pro rata portion of the reinsurance premium as its reserve. The obvious impropriety of this legislation was pointed out by "The Chronicle" at the time, as was also the fact that the only reason why there was any occasion whatever for such a law is that the reserve re-

quirements, being on a gross premium basis, are excessive and that if there is a genuine intention to rectify the reserve requirements as applied to re-insurances, it can best be done by amending the reserve laws in general so that company will not be forced into insolvency when it holds a reserve that is in point of fact ample, being a pro rata portion of the net premium, or about 65 per cent. of the gross premium reserve nowadays required.

The effect of the bill was to place at a disadvantage all the smaller fire insurance companies which were best able to do business by reinsuring a part of the lines which they took, and thereby to throw the business more and more into the hands of a few of the largest and strongest companies which by reason of their surplus funds could take as large excess lines as they chose, reinsuring all they did not choose to carry directly, because it cut no figure with them that they were charged with a large additional reserve. The efforts of almost all good fire underwriters, whether representing large or small companies, throughout the country have been continually directed since this amendment was passed, toward obtaining its repeal and so far without effect.

The Tax Bill of 1910 Also Probed.

Another measure which called for a large amount of expenditure by the fire insurance companies, and concerning which testimony has been taken, was the tax bill of 1901, for which Hon. B. B. Odell, then governor, was directly the sponsor. The proposal was to impose a direct tax upon the surplus of insurance companies and under orders from the governor the bill was introduced, referred to the

(Continued on Page 5.)

THE CONTINENTAL AND WESTERN UNION.

The unionization of the Continental is not creating any great stir in the West. Very few agencies have changed their complexions so far, and comparatively few agents are making any statement of their intentions. Both union and non-union special agents are keeping close watch on the situation, especially in towns where they hope to gain an advantage by change. The agents are pretty shrewd. The older ones have in most instances gone through separation once, and they are laying their plans so as not to disturb their business if it can be avoided. The fact that the Continental has nearly two years yet in which to get its house in order makes haste unnecessary, and there is reason to believe that agents who are affected by its change are likely to move cautiously. Every agent has some business that he controls almost absolutely, and some on which his hold is weak. It is surmised that agents will put into companies of the class they intend to keep their business on which they have a doubtful hold and load up those they intend to let go with the business they can hold against them when they are let out. This tends to keep the field men and the companies in the dark as to the agent's real intentions.

All Watching.

The change of so important a company from one camp to another is certain to cause some inconvenience and loss, but everybody interested will be glad to see it reduced to a minimum.

In view of present unsettled conditions the agents are justified in holding back from deciding upon their course as regards unionization. President Evans does not seem to have experienced any change of views on the commission question by reason of his new environment, as he still expresses himself as in favor of contingent commission contracts with agents. While it is hardly expected that his views will overcome those of his numerous union associates, other factors may enter into the situation before the Continental's two years shall have elapsed, which will result in changes.

State Laws May Intervene.

In some of the Western States companies may find themselves relieved by law of the privilege or necessity of paying agents more than 15 per cent. flat, or some States may permit a contingent arrangement while not permitting the present Western Union graded scale of commissions. With such uncertainty as to the future, agents are likely to prepare for con-

tingencies, but make no open move until they are obliged to do so.

Peaceful Iowa.

Representatives of companies writing farm business in Iowa held another of their periodical conferences in Chicago last week. Absence of anything like demoralization has not been more apparent in Iowa farm insurance circles in years than it is now. Field conditions are very satisfactory. Nevertheless company managers are worried over the constantly increasing loss ratio on farm business. It used to be that anybody with a fair knowledge of the business who could scrape together a few thousand dollars in cash and some more in stockholders' notes could launch a company in Iowa and make money on farm business. It is so no longer. It requires the most careful underwriting to show a profit for a company that is well established and has a good reputation.

The Increased Loss Ratio.

The rates have not been reduced in several years, but the hazard is increasing constantly. The big farm barn is the great menace. While the farmer used to stack his hay and keep his implements, stock, small grain and corn in different buildings, separated more or less around the farm yard, he has grown rich and built large barns in which everything, except, perhaps, his corn and hogs are sheltered. A distributed risk has become a concentrated one, and there are now total losses where formerly there were partial ones. With the storage of larger amounts of fresh hay in large barns, lightning losses have increased.

Gasoline an Increasing Menace.

What specially troubles farm underwriters in Iowa now, however, is the increase of the gasoline hazard. So many processes are now conducted on farms that gasoline engines have been installed. Many farmers now have gasoline or acetylene illuminating systems for their houses. The latest increase in this hazard is arising from the purchase of many automobiles, which the farmers run into their barns. While the companies have charges for gasoline storage, they have not yet decided upon a satisfactory way of handling the automobile hazard.

Is Now a Special Hazard.

The Iowa farm barn has really become a special hazard and some underwriters express the opinion that the large ones ought to be rated under schedules just as special hazards are. In view of the stringent anti-compact law of Iowa and the very large number of farm agents, among whom no local organization of an effective character can exist, the problems of farm

business are particularly hard to handle, and much consideration and discussion is necessary before any practicable plan of action can be mapped out.

The Rush Has Quieted.

The unusual influx of fire companies to the Western field, which was noticeable for several years, has largely ceased. There are companies constantly entering new States, but what with failures and reinsurances, the number actually engaged in business in the various States is not growing rapidly now. There appears also to be some reaction as regards the attempts of small companies to get extensive agency plants in a hurry. Some of the companies entering States are appointing only a few agents and these at points where there is considerable business and the prospect of getting a reasonable volume without unnecessary pressure is fair.

The Small Fry Are Quitting.

While the decline of the small general agency, which represented only one or two companies for a State or two, was noticeable a year or so ago, some of the larger ones which handle "fleets" are growing. These agencies have volume enough to warrant the employment of field men of ability, which raises the tone of the field somewhat. Their practice of reinsuring back and forth among the companies enables even small ones to take fair gross lines and it is not necessary to plant every company everywhere in order to get a fair volume of business.

Disillusionment.

The last couple of years has tended to disabuse the minds of underwriters in small companies of the fiction that there was so much velvet in the business that they could make money on it regardless of expense. Some of the smaller companies now entering parts of the field are watching the expense account with the utmost care, preferring to make haste slowly rather than get a volume of business at a cost which is bound to make it unprofitable in the end.

HARTFORD LIFE

Home Office, HARTFORD, CONN.

EMPLOYERS LIABILITY COMMISSION REPORT.

The Employers' Liability Commission, composed of the Senate and of the Assembly, and of appointees of Governor Hughes, which has been at work for the past year studying employers' liability laws of the State and the workmen's compensation laws of other countries, has reported recommending compensation without regard to negligence in cases of certain hazardous occupations, as follows:

The erection or demolition of any bridge or buildings in which there is or in which the plans and specifications require iron or steel framework; the operation of elevators, elevating machines or derricks or hoisting apparatus used within or on the outside of any such bridge or building for the hoisting of materials for such erection; work on scaffolds of any kind elevated twenty feet or more above the ground, water or floor beneath in the erection, construction, painting, alteration or repair of buildings or structures; the construction of tunnels or subways; all work carried on under compressed air; construction, operation, alteration or repair of wires, cables, switchboards, or apparatus charged with electric currents; all work necessitating dangerous proximity to gunpowder, blasting powder, dynamite or any other explosives, where the same are used as instrumentalities of the industry; the operation on steam railroads or locomotives, engines, trains, motors or cars propelled by gravity or steam, electricity or other mechanical power, or the construction or repair of steam railroad tracks and roadbeds over which such locomotives, engines, trains, motors or cars are operated.

For these occupations it is provided that there shall be compensation for all accidents, if the workman is injured in the employment either by the negligence of the employer, his agents or employees, or the necessary risk or danger of the employment or one inherent in the danger thereof and without regard to the negligence of the workman who is killed or injured.

Rate of Compensation.

For this class it is proposed that the compensation shall, in event of death, be four years wages, not exceeding \$3,000, in event of total disability, 50 per cent. of the average wages while disabled, and in event of partial disability 50 per cent. of the impairment of the earning power, provided that the weekly compensation shall not be more than \$10, and also that the payments shall not extend beyond a period of eight years. In event of the death of the workman caused by accident the compensation is payable only in case the decedent leaves a widow or a parent or a child.

It is provided that the rights of action now existing either at common law or under any statute, shall not be impaired by this legislation, but that the injured workman or his next of kin must elect, at the time of bring-

ing action, whether to claim under the compensation act or under the liability law, and must abide by such election.

Similar to the British Act.

This bill is similar in many respects to the British compensation law except that it pays four years' wages instead of three in event of death, and limits the weekly compensation in event of injury to \$10, and a period not exceeding eight years; and also excepting that if there is an election to sue under the existing laws there will be a total failure to recover in event that suit is not successful, whereas in Great Britain the court trying the same is empowered and directed to assess the compensation under the compensation act and give award for the same.

The British law, like this proposed compensation act, limits the application of the same to certain hazardous occupations and although it has since been very much extended it does not even yet apply to all employees.

An Optional Measure for Other Occupations.

Another bill has also been offered on behalf of and under the recommendation of the committee, provided that by agreement employer and his employees may introduce compensation for industrial accidents as a complete substitute for employers' liability by making such agreement and filing it with the county clerk. The schedule of compensation is as per the bill relating to hazardous occupations.

This second bill also introduces material modifications of the present liability act as by requiring the employer to prove contributory negligence instead of requiring the employee to

prove that he was not negligent, as by modifying the fellow servants rule, as by holding the employer liable for the negligence and not the employee, who is "entrusted with any superintendence," or "with authority to direct, control or command an employee in the performance of the duty of such employee," and as by all but abrogating the defense of assumption of the risk.

A LIE OR A MISCONCEPTION.

One of Platt's reminiscences was as to the morning when he was to appear before the insurance investigating committee. Robert C. Morris, now president of the Republican Club of New York, was Platt's counsel, and was with Platt just before Platt got into his cab to appear before the investigating committee. Platt went to his safe in his old offices at 49 Broadway and took out a bunch of papers.

"What are those papers?" inquired Morris.

"Read them yourself," replied Platt, "and they will tell you that they won't rough me very hard to-day."

Platt was on the stand only a short time. The contents of the papers had been made known to those directly interested in the investigation.—From several daily and other papers.

If there are anywhere to be found persons who can believe that anything Senator Platt could have flashed upon an astonished and admiring world, would have deterred Charles E. Hughes—and he, alone, at all times decided what lines of inquiry should be followed in the investigation—from doing his full duty or would have resulted in anything except that all such papers would have been promptly dragged forth into the light of day, had Charles E. Hughes known what they were and that they were on hand—why, then, there are persons who can believe it, may Heaven be considerate of their mental condition!

When Thomas C. Platt left the witness stand after Charles E. Hughes had uncovered the venality of the Republican State machine under his direction, there was no longer a soul so base as to do him reverence, in the length and breadth of the nation. And then and there commenced the tearing down of the system of party and legislative blackmail which it is now granted Charles E. Hughes, through his worthy appointee, the superintendent of insurance, to complete and, let us hope, to render its return forever impossible.

A FIFTH WHEEL.

In the United States there is a physician to every 568 inhabitants, according to the "Philadelphia Record." Speaking further, it says that in Europe the proportion is one physician to 1,500 inhabitants. Also that the overproduction in this country comes from insufficient and low-grade teaching. It would be a curious inquiry in taking the above figures as trustworthy, to compare the mortality statistics of countries where there are too many doctors with countries where there are too few, or only the voodoo type. Some years ago a very distinguished Philadelphia physician, now dead, declared "that if all the doctors in the country were decapitated, except the sur-

geons, there would be no change in the death rate. The surgeons and the nurses would save the day."

Which seems to imply that a physician's sign suggests to nervous, balky and lonesome folks that they need one, as a barber's pole suggests a hair-cut or a shave.

A motion is in order to abolish barber shops and give whiskers a chance.

There is just one point about the statistics of the "Record" which arouses inquisitiveness, always in bad form but nevertheless irresistible, and that is as to what it calls a physician in the United States. Surely its figures are neither based solely on the directories nor upon the diplomas that have been granted by medical schools. If they have been the grain of salt will reduce the figure about 90 per cent.

This is a case where a comparison is intensely odious, because in Germany and England the practice of medicine is a profession and science in reality. Here—well just call it a huckster's trade, for the most part.

THE DEADLY DRINKING CUP.

With the nearby advent of spring and the development of the germs of disease it is worth while to take warning from the Board of Health of the State of Kansas, which has issued a summary rule abolishing the old-fashioned germ laden drinking cups from schools, railway trains and stations and other public places.

For years the general communion cup has been being rapidly abandoned by the churches and the individual cup substituted. The sanitary reasons are obvious and the results are equally obvious. There is probably no more deadly single disease promulgator than the public drinking cup that could be conceived, and that would be a public toothbrush.

The Kansas Ruling.

This is the regulation now in force in Kansas, and it should be promptly followed by every municipal government. A fine of not less than \$50 nor more than \$500 is the penalty for violation.

The regulation follows:

Whereas, it has been repeatedly demonstrated that the use of what is usually known as the common drinking-cup is dangerous and is an undoubted source of communication of infectious diseases; now, therefore, in the interest of the public health,

Be it ruled by the Kansas State Board of Health:

That the use of the common drinking-cup on railroad trains, in railroad stations, in the public and private schools and the State educational institutions of the State of Kansas is hereby prohibited.

No person or corporation in charge or control of any railroad train, or station, or public or private school, or State educational institution, shall furnish any drinking-cup for public use, and no such person or corporation shall permit on said railroad train, station, or at said public or private school or State educational institution, the common use of the drinking-cup.

TWO CHAUFFEURS SENT UP.

Justice Crane of the Supreme Court in Brooklyn sentenced two chauffeurs, George Fenn and James F. Cross, to six months in the penitentiary Tuesday, for running over and killing William Jardine several months ago. The chauffeurs were convicted of manslaughter in the second degree.

A few convictions like these will sharply curtail the terrible carnage by the drunken and reckless motorists. If the auto makers are wise in their own interests they will endeavor to avoid further inflaming public sentiment, now already at feverish temperature, on this subject.

Insurance Commissioner Barton of Nebraska has received a pledge from the Court of Honor, a Springfield, Ill., fraternal society, that it will cease to employ special agents to handle death claims. He has also received a pledge from the Fraternal Order of Ben Hur that hereafter only elective delegates will be permitted to vote in its sovereign law-making body.

Fraternal Tributes, a fraternal insurance society of Rock Island, Ill., wrecked by claims arising from a brief union with American Home Circle, has voted to disband and reinsure in the Northern Life Insurance Company of Illinois.

EVIDENCE OF LEGISLATIVE GRAFT.

(Continued from Page 1.)

insurance committee and immediately reported favorably without opportunity being granted for a hearing. In consequence of this there was a great deal of public outcry against the obvious unfairness of such a course and the senate committee was compelled to recall the bill and grant a hearing at the end of which the governor surrendered and changed the basis to a tax upon premiums collected in the State of New York.

Full Disclosure is Hoped For.

There is no doubt a strong indisposition on the part of men who have represented institutions which have been blackmailed, to "snitch" upon the blackmailers and although undoubtedly the memories of witnesses who are called upon to testify to transactions which are from eight to ten years old are doubtless faulty, there is a widespread belief that when it is seen to be quite the honorable thing to do, persons will step forth who can tell just what members of the Legislature received the relatively large aggregate sums disbursed. The testimony of Mr. Kennedy and of President Seward, of the Fidelity and Casualty, brings it very close to that; and the disclosures of the activities of Mr. Buckley may at any moment result in fixing the responsibility upon the guilty legislators.

The people of the State and county are undoubtedly not in a frame of mind, likewise, to endure concealment, and therefore, it is to be hoped that persons who do know of these things will come forward and aid the governor of the State of New York and the superintendent of insurance, who is doing his duty unflinchingly, to furnish a basis for such a housecleaning as will enable the legislature of the State to redeem itself and also will enable such legislation to be framed and methods to be adopted as will render it highly improbable that the machinery of a great political party in and out of the legislature will ever again be directed toward exploiting and despoiling the business interests of the State under a threat of unfavorable legislation.

AN AWKWARD ATTEMPT.

For some months "The Chronicle" has been calling attention to the operations of certain so-called Lloyds, of London, on this side. An extensive article was recently printed concerning the W. H. Crane Company, which purported to be a regular Lloyds' group of underwriters.

At that time it developed that it was composed of Americans whose names could not be traced over here and who had absolutely no connection with the genuine Lloyds. It seemed a dumified bunco band.

This was brought to the attention of the governing committee of Lloyds, of London, and has resulted in the promulgation of the following by that staunch old arm of the British Government:

The committee of Lloyds have recently received a form of policy which has been offered by the W. H. Crane Company to persons resident in America, headed:

**"LONDON LLOYDS MARINE POLICY."
"SIGNED BY UNDERWRITING MEMBERS ONLY."**

The wording is that of an ordinary Lloyds marine policy, and attached is a set of clauses commonly used by Lloyds and insurance companies for business similar to that to which the policy form in question relates, and names purporting to be those of the underwriters are stamped on the policy in the form and manner customary at Lloyds.

Inquiries have been made at the office of the W. H. Crane Company as to the financial status of these alleged underwriters, but little information has been given beyond a general statement that they are Americans.

Investigations made in America have been equally fruitless of result, and the committee of Lloyds have no hesitation in advising the public to have nothing whatever to do with these policies offered by the W. H. Crane Company, or with those on forms headed "British Underwriters," "Royal Underwriters," "Royal Alliance Underwriters," or "Imperial Underwriters."

This action by Lloyds is somewhat belated but is better than the indifference of the past. With it really aroused to action, as indicated by its recently having a voluntary housecleaning of its doubtful membership, and its now evident purpose to drive out the frauds and knaves who trade upon its good name, there is hope that conjoined action by the New

York Insurance Department may drive these semi-soldiers of fortune into an obscurity from which they may only emerge in disguise—or disgrace.

SUCH IS FAME!

"A Name Misspelled, a Bad Portrait and a Worse Bust."—Byron.

The "New York Times," in enlightening its readers about the labors of the Superintendent of Insurance of the State of New York, in the present investigation, which were already attracting much public attention, printed the following appreciative words at the head of its editorial column on Monday last:

The inquiry which Mr. Hitchcock of the Insurance Department is conducting into the methods of certain fire insurance companies in influencing legislation throws a good deal of light on the workings of the machinery of the Republican party, its character, and aims.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

IN NEW ENGLAND

EXCHANGE ADOPTS LUMBER RATES AND AMENDS CONSTITUTION.

The matter of lumber rates (not applying to retail yards), which has been before the New England Insurance Exchange for several months, was settled at last Saturday's meeting by the adoption of the following schedule:

Portable sawmills	\$10.00
Lumber or logs within one hundred (100) feet of sawmill or other woodworking manufactory—Same rate as exposure.	
Lumber piled on cleared land—	
If policies contain the Piled Lumber Clause	3.57
If policies contain the Piled Lumber Clause and the Standard 80 per cent. Reduced Rate Clause.....	2.50
Lumber piled on pasture or meadow land—	
If policies contain the Open Lot Lumber Clause.....	4.28
If policies contain the Open Lot Lumber Clause and the Standard 80 per cent. Reduced Rate Clause.....	3.00
If policies contain the Open Lot Lumber Clause and Piled Lumber Clause.....	2.14
If policies contain the Open Lot Lumber Clause, the Piled Lumber Clause and the Standard 80 per cent. Reduced Rate Clause.....	1.50

Piled Lumber Clause.

In consideration of the reduced rate at which this policy is written, it is expressly stipulated and made a condition of the contract that a clear space of one hundred (100) feet shall be maintained between the lumber hereby insured and any standing wood, brush, steam railroad, steam or water power sawmill, planning mill or refuse burner, and four hundred (400) feet clear space shall be maintained between said lumber and any portable steam sawmill.

Open Lot Lumber Clause.

In consideration of the reduced rate at which this policy is written, it is expressly stipulated and made a condition of this contract, that the lumber hereby insured has been drawn from the forest lot on which it was cut and sawed, and piled on pasture or meadow land.

Article III. of the constitution was amended in the sense of reducing the number of vice-presidents to two, and making provision for the composition of the executive committee, and reads as follows:

The officers shall consist of a president, first and second vice-president and an executive committee consisting of a chairman and five other members. The officers shall be elected by ballot at the annual meeting of the

exchange, which shall be held on the first Saturday after the first Monday in January of each year.

At the annual meeting in January, 1911, there shall be elected a president, a second vice-president and three members of the executive committee for one year; also a first vice-president, chairman of the executive committee and two members of the executive committee for two years; after which all officers shall be elected for two years as their terms expire.

The president and vice-president shall be ex officio members of the executive committee, and all officers shall hold their office until their successors are elected.

All vacancies shall be filled by the executive committee for the unexpired term. The president and chairman of the executive committee shall not be eligible for re-election to the same office until the expiration of one year.

A secretary, who shall also act as treasurer, shall be appointed by the executive committee at a compensation to be fixed by them, and he shall hold office during their pleasure, subject to the approval of the exchange.

A new article V of the by-laws was adopted, which substitutes for the somewhat spontaneous method of nominating and electing officers, heretofore in vogue in the Exchange, a more deliberate and orderly course, as follows:

During the first week of November in each year, the secretary shall notify members by circular that at the meeting of the exchange to be held six weeks prior to the annual meeting, there will be elected a nominating committee. At the above mentioned meeting, a nominating committee of five members shall be elected by ballot in the following manner: each member present shall be entitled to cast a ballot containing not more than five names, and the five having the highest number of votes shall be declared as constituting the nominating committee.

It shall be the duty of the nominating committee to present to the secretary within two weeks of their election, nominations for each office, the term of which expires at the next annual meeting, and the secretary shall post such list in the assembly room and the general office not later than 10 a. m. on the fourth Saturday previous to the annual meeting, and shall notify members by circular during the following week of the list of nominations.

Other nominations may be made only by petition signed by twenty-five active members, by filing such petition with the secretary previous to the Saturday next preceding the annual meeting, and the secretary shall, not later than 10 a. m. on the Saturday next preceding the annual meeting, post such nominations and also notify members in the same way as provided for the nominations made by the nominating committee.

The secretary shall have printed ballots prepared for use at the annual meeting, which shall contain the names of all persons nominated in accordance with the foregoing. A majority of all the votes cast shall be necessary for an election to any office.

The Massachusetts Savings Banks Insurance Fiasco, as Viewed by a Reformer of Another Stripe.

Truly, an old saying might be paraphrased to read: "When insurance reformers' fall out, practical men get the truth"; witness the following considerations which Reformer Erving Winslow, of Boston, who wants life insurance, by the State, advances in a letter to "The Herald," in regard to the failure of the Massachusetts Savings bank insurance scheme:

There is no disposition to be censorious toward the savings bank insurance scheme or the Massachusetts Savings Insurance League, the latter constituted with large funds which enable it to carry on an active campaign involving the employment of eminent legal counsel.

In answer to the letter of your correspondent it might be said that he makes rather a strained comparison between the time necessary to "educate" the people to this method of insurance and that assumed to be required to educate the managers of savings banks, men of wisdom, experience and foresight, to take hold of an undertaking into which it has been found impossible to dragoon them!

May it not be temperately asserted that a scheme is conspicuously non-successful which was intended to be adopted by the savings banks of the State of Massachusetts, 189 in number, when only two of them, a little

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)

Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)

Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

over 1 per cent., have taken up the scheme, or, as far as is known, have shown any intention of taking hold thereof? (Fortunately the South-bridge Savings Bank was not numbered among the minute fraction of experimentalists).

The non-success of the counter insurance system indicates to your sanguine correspondent a "promising field!" Yet little or no insurance would have been furnished thereby to the Whitman and Brockton Savings Banks. Their business came almost wholly from agencies established in manufacturing concerns where the Massachusetts Savings Insurance League through its paid representatives has been given opportunity for its propaganda. There was a sufficient warning in this respect, it might have been supposed, in the entire failure of counter insurance in England.

Once more, your correspondent alludes to a state insurance system, which simply consists in giving by the State that entire protection which it has been found impossible to offer to the insured under any system of inspection or control, as a "more socialistic scheme" than the savings insurance device. As a matter of fact, it is proposed in a State insurance plan that the whole expense should become a charge upon the co-operative undertaking, whereas the present scheme is so far "socialistic" that it furnishes a medical expert and an insurance expert, and supplies printed books and other forms needed for carrying on the business. It has, of course, already created a bureaucracy which furnishes it with a corps of advocates and defenders.

While writing, a friend reminds me of the fact that "the setting apart of a dividend by the savings insurance bank, which was so generally advertised through the newspapers, is akin to the dividends paid by gold mining propositions that begin to return 1 per cent. a month as soon as the unfortunate subscriber's money has been paid in, entirely regardless of the fact that no dividends have really been earned. If the contributions on the part of the State and of the misguided friends of the scheme should be added to the expense incurred by the savings insurance banks the public would readily see how far from being in the position to rebate any of the premiums the savings insurance banks are."

The savings bank experiment might have been welcome as in a certain way a step toward the one safe, economical and popular method of insurance, but unfortunately the non-success of headlong and unadvised attempts in the direction of a reform inevitably hinder and delay its adoption.

Join Forces April 1.

Boston, March 23 (Special)—Arrangements were completed to-day by which the Boston fire insurance offices of A. M. Bullard & Co. and Cyrus Brewer & Co. are to unite as of April 1, A. M. Bullard becoming the senior member of the firm of Cyrus Brewer & Co. The Fidelity-Phenix, the Royal Exchange Assurance and the German Alliance will be added to the representation of Cyrus Brewer & Co. The

new firm will consist of Alfred M. Bullard, Arthur B. Gilmour, Arthur K. Pope and William T. Ulman and the companies represented by the combined agencies are these: Fidelity-Phenix of New York, Royal Exchange of London, German Alliance of New York, Phoenix of London, American of New York, Delaware of Pennsylvania, Providence-Washington of Rhode Island and the Virginia Fire & Marine. This combination will doubtless be one of the most important agency unions ever consummated in Boston, and will stand second as to volume of premium income, according to the latest returns. Mr. Bullard, the head of the new firm, has been thirty-eight years in the service of the Phenix, and all the other members are well known and experienced insurance men.

New England Brevities.

The bill of Insurance Commissioner Hardison, defining the classes of insurance and amount of capital required, also that calling for standard provisions in accident policies, have been referred to the Massachusetts legislative insurance committee to a sub-committee, comprising Representatives Montague, Vinson and Cavanaugh, and an early report is looked for.

The Massachusetts Legislature has passed an enactment, permitting the payment of commissions, by companies other than life, in case of policies under which they or authorized representatives are insured; also an act prohibiting the use of fire balloons.

Fred M. Blount & Sons, of Chicago, have been appointed agents for Cook County of the Massachusetts Bonding.

To-morrow evening George A. Palmer will speak before the Boston Insurance Library Association on "Marine Underwriting," and Mayor How-

ard will discourse on the recent city election in Salem, Mass., of which he is the picturesque outcome.

Henry G. Morse, president of the Fitchburg (Mass.) Mutual Fire Insurance Company, died Sunday night, aged 72.

The Merchants Fire of New York has applied for admission to Massachusetts, and the Union Fire of Buffalo has withdrawn.

The Haverhill (Mass.) board has joined the N. A. of L. F. I. A.

AGENTS WANTED FOR UNOCCUPIED TERRITORY

FIRE INSURANCE AS A PRE-REQUISITE TO CREDIT.

Address by Arthur Hawxhurst, manager insurance department of Marshall Field & Company, before the Fire Insurance Club of Chicago, March 8, 1910, in part:

Fire insurance is an absolute pre-requisite, or a necessary factor in order to obtain credit. Credit is based on a mercantile reputation entitling one to be trusted or to receive goods on promise of an after payment; and this carries with it the understanding that every known precaution will be taken by the trusted party to protect himself, and the one trusting him, against loss; particularly such losses as he can shield both from. Accordingly, before one places his worldly goods under another's roof, without first receiving value thereof, it is demanded that they be protected by insurance being placed thereon. * * *

Such being the case, then, if we are merchants having this material wealth already spoken of, we cannot afford—we dare not venture the chance—to place this property of ours into the care of others, without a proper guarantee that it, or its equivalent in value, will be returned to us.

If this property should be destroyed by fire while in the possession of those we intrusted it to, and the trusted ones have no wherewithal to repay us, it stands to reason that we must lose, for our goods were placed on credit; and while one loss might or might not be a misfortune, yet if it can happen once, the very nature of the fact tells us that there may be many repetitions, so many, in truth, that without a guarantee against it extended and far distant business cannot be safely attempted or carried on. Especially so is this true in this country, where the losses by fire now amount to nearly \$220,000,000 annually, and reached the enormous figure of over \$518,000,000 in a single year, 1906; and yet we claim to be an enlightened and advanced people! * * *

The Origin Of Insurance.

Certainly, the entire elimination of loss by fire is not possible, although largely reducible; but this is not sufficient, for this but bespeaks for contraction of affairs, while the world seeks expansion. It is the same question that confronted men of business seeking the marine markets of the world before the epoch of the present fire insurance company, and it culminated then in the establishment of what is now known as London Lloyds, with which all no doubt are familiar. * * *

They were then, and are now, enabled to do this by each member contributing a sum or premium on the value of his property as regulated under the laws of average. In other words, each of the many submits to a small tax being imposed by companies created for that purpose. This tax is based largely upon unknown factors, but how it can be determined otherwise I do not know, for it is not possible to find out in advance just how much property will be destroyed in a given time. We do know by looking at the records of the past fifty years that for every \$205 written on an average only one dollar was paid

in losses, but it varied from one dollar paid to every \$245 written in 1905; from one dollar paid to \$121 written in 1906; from one dollar paid to \$256 written in 1907; from one dollar paid to \$223 written in 1908, and so on.

But to resume, this tax is that protector against this mighty element of fire. Fire insurance is the police power of the mercantile world. * * *

Insurance does not confine itself to the protection of any one nation or business; but like an apostle of truth and justice, it spreads over the civilized world, and it has missionaries everywhere offering to all protection from loss by fire, lightning and tornadoes; the actions of the thief; credits; the defects in a steam boiler or an elevator; the storms of the sea; the result of a personal accident, not to speak of death, all the misfortunes and mishaps of every conceivable nature in human life are lessened by it, and no one realizes or can realize this better than those who have passed through a bitter experience. Certainly the people of California have, and this is what I find in part in the "Report of the Special Committee of the Board of Trustees of the Chamber of Commerce on insurance incident to the San Francisco Fire": * * * "The lesson that the insured will take most to heart is that insurance will not take care of itself, nor will his broker take care of it for him without some watching. The insurance interests of a business house are immensely important and should be looked after by a trained person."

Fire Insurance Not for Dividends.

It is true, that fire insurance does not agree to pay a profit to any man, as some would like to believe and would enforce. No such intention was conceived at its birth, for it was only meant to indemnify the loser against loss—not a loss of a profit, but a loss of material property—such as is in the scales when a credit is made. This should be enough of a guarantee to an honest seller, for it fulfills all the actual necessities of his wants, and enables him to spread his trade and goods over the world. * * *

Now as insurance stands for protection against all necessary and unnecessary losses alike, it is consequently one of the most important adjuncts to any transaction of credit or otherwise, being at times the only plank of safety to the assured between prosperity and poverty. How few men comprehend this or even take the trouble to do so. They do not seem to realize that if credit is the motive power to the ship of business, insurance is its rudder and life raft and often the only hope left for salvation after the vessel goes down. This has been the case in many instances through the business world. * * *

Credit and fire insurance, especially, must always go hand in hand, for credit cannot be safely granted, or business now extensively carried on without insurance. This one fact alone should place it high among the valued things in commercial life, for without fire insurance what would become of business? * * * Overtaxed by every State, knocked around representative halls and senate chambers, abused and robbed by many beneficiaries of existence, nailed to the cross of many men's unfair criticism and grievances,

and yet, like a redeemer, not looking for the plaudits of this world, insurance goes on fulfilling its mission and saving from misery and want the children of men. * * *

Find, if you can, another business that is doing half as much for man's benefit, and then feel a just pride in the business in which you are engaged. The owners of no other industry would furnish from their private purse millions upon millions of gold because a city was destroyed and its people were in dire distress, having only its ashes to tell of a past greatness; but the owners of fire insurance companies have done this—they did it for San Francisco, and in return they were not even given credit for a magnificent fairness to do not only their own full share, but more than that; to meet every possible claim against them, preserving thereby the credit of a great metropolis. * * *

Right here, in passing, I want to say that you can make no better purchase, no safer investment than a long-term endowment policy in some good company. It will always be some protection to those depending upon you for the means of existence; it will be a savings bank of the very best kind for your capital; it will be a banker if you need to borrow; it will always be a source of comfort to you through life and a staff for your declining years. Get all you can of them and keep them until maturity, and they will demonstrate to you also the other side of the answer, that insurance is a pre-requisite to credit, for this is credit obtained in advance by having insurance. * * *

If we do have to pay an increased rate now and then if a city is destroyed, what sweeter or fairer way to demonstrate the brotherhood of man than by this means, for it enables us and at small cost to do good to the afflicted, to maintain the credit and integrity of our institutions for the welfare of others as well as for ourselves; for we know not the hour when we, too, not alone for our credit transactions, but for our homes, will need the helpful hand of insurance capital.

In conclusion, let me say, all honor to the business of insurance! May it ever be with us here, and may we have our policies with us when we go hence, and may they be in the right companies for us to obtain credit or indemnity if we strike a storm in crossing the dark river or a conflagration at our journey's end.

COMMERCIAL - UNION

ASSURANCE CO.,

(LIMITED)

OF LONDON.

OFFICE;

Cor. Pine & William Sts.

NEW YORK.

BACKWARD BALTIMORE.

Baltimore is making lamentably slow progress toward fortifying itself against a repetition of its memorable conflagration. Six years have passed but the new report of the engineers of the underwriters, noted elsewhere, says that the conflagration hazard is practically the same as it was after the big fire. The high pressure fire system will probably not be ready for use before July, 1910, and will cover only a part of the congested value district. Apparently Baltimore is suffering from a niggardly policy in the matter of making appropriations for the fire department. So many conflagration breeders still exist that it seems absurd to condemn the fire department for not preventing such fires as threatened the wholesale district this winter. Baltimore needed badly, in February, 1904, the assistance given by other cities—given at considerable expense and under inexcusable difficulties—but the recommendation to make the hydrants usable by other cities seems to have had scant consideration. It was not adopted.—“Insurance Engineering.”

The Western States Fire Insurance Company of Kansas City has been chartered. It has a capital stock of \$250,000. The board of directors is composed of these residents of Kansas City; John Kennish, J. R. Quarrels, P. F. Lang, August J. Bulte, P. S. Kault, D. A. Norton, N. F. Fitzpatrick, A. P. Espenshied, W. W. Goodwin, T. J. Coughlin, A. L. Ernst, Frank C. Peck and J. E. Seaver.

The following names have been added to the brokers list of the New York Fire Insurance Exchange: Bulkley & Horton, Inc., No. 414 Myrtle avenue, Brooklyn; Samuel Levinson, No. 100 William street; Benjamin Levy, No. 50 Suffolk street; Louis Solomon, No. 271 Broadway.

Judge Cox in the United States Circuit Court has denied the motion of the Helvetia Swiss Fire Insurance Company to dismiss the suit of John J. Tierney as assignee of claims arising out of the San Francisco fire in 1906. The case has been placed on the calendar for trial in April.

The Home of New York has reinsured the tornado business of the southern department of the Liverpool and London and Globe on the gulf coast and within 100 miles thereof.

Albert H. Griffen, No. 138 Montague street, Brooklyn, has been appointed manager for the London & Lancashire Fire Insurance Company.

AN IMPORTANT DECISION.

The Providence Washington has just obtained a victory over the Western Union Telegraph Company by a decision of the Appellate Court in Chicago. This decision holds the company liable for the failure of the local agent to cancel a policy through non-delivery of the telegram which ordered the cancellation. The Ohio State agent of the company sent a telegram from Van Wert to the local agent at Newark ordering the cancellation of the policy of the Providence-Washington on the Newark Paper Company's plant. The telegraph company sent the message to New York by mistake. The order never reached the local agent and in less than a week after the telegram was sent the risk burned. The insurance company sued the telegraph company for the amount it paid in settlement of this loss and secured judgment in the lower court. The telegraph company appealed the case and the Appellate Court held against it.

James W. Shirley, who has for many years been connected with the American of Newark, as special agent in New Jersey and the New York suburban district, has been promoted to an important position at the home office.

The “Baptism of Fire,” which “The Chronicle” predicted six months ago for the fire insurance companies is fulfilled. But it never dawned that the casualty and surety people would be dragged into the crucible.

A fire doing considerable damage recently occurred in a paper mill, insured in Mill Mutuals, caused by the use of patented compound for waterproofing paper as it comes from the paper machine.

William J. Kelley, for many years special agent for Maine and New Hampshire of the Phenix of Brooklyn, died early this week.

IN FINE CONDITION.

The New York insurance department has issued the report of the examination of the Buffalo German Insurance Company of Buffalo. It was made for the purpose of verifying the annual statement filed with the insurance department at the close of the year on a proposed increase of “guaranty surplus” and “special reserve” funds. The examiners, Richard A. Elmer and W. H. Nagle, report that the financial condition of the company is such that the increases are permissible.

The meeting of Continental Insurance Company stockholders was held last Friday and the 100 per cent. stock dividend ordered by the directors was ratified. About 8,000 shares were represented.

The Lion Bonding Company of Omaha has reinsured its plate glass business in the United Surety, of Baltimore. This queer concern has had several old changes recently.

WHAT IS THE RATIONALE OF RATING?

In view of the socialistic and paternalistic development of State rate-making in the golden West where former borrowers are now riding in autos and lending money to their former Eastern mortgagors, the remarks of a fire insurance company, thoroughly balanced, mentally and financially, by long experience, counts for much. And it's worth while, from the standpoint of staying qualities, to deliberate on the host of new things proposed insurancewise in this same golden West.

The entire subject is well covered by President Chase, of the Hartford Fire, in the following statement made to "The Chronicle," and to its agents:

A Wide Subject.

Recent events in certain parts of the country indicate that ere long public interests will require a correct general understanding of the following important question: "On how wide a territorial basis of experience must estimates of rates be predicated in order to properly apportion insurance cost?" The subject is one on which the impressions of the average citizen are but vague. Some think that if the insurance companies have made a substantial profit for five or ten years in an individual city, that fact of itself calls for a reduction in its rates of insurance. Others go further and are heard to say regarding their own property, "I have carried insurance for twenty years and never collected a dollar of loss. I believe I should have a lower rate." This remark is often uttered in perfect good faith, the person making it being unaware that he states his own *reductio ad absurdum*.

Fallacies.

The opinion of such an individual is based on two fallacies; first, that his case is exceptional, and, second, that fire insurance rates can be predicated upon so narrow a basis as the companies' experience on a single risk. If it were not true that for over a period of twenty years there were thousands of individuals who sustained little or no loss on their insured property, the business of fire insurance could not exist except at an average rate much greater than that which now obtains. The average rate throughout the United States on all classes of risks, hazardous, non-hazardous and extra hazardous, is now a little over 1 per cent. If, for purposes of illustration, we assume 1 per cent. to be the average rate, it is apparent that an average risk could be insured for ninety-nine years without sustaining a cent of loss and yet, if destroyed in its hundredth year, not only cost the companies all the premiums it had paid, but leave them out of pocket its proportionate share of a century's expense. It is therefore evident that a single risk's prolonged immunity from fire is no exceptional feature, and justifies no individual modification of rate. Rates, as far as possible, are based upon the experience of classes of risks, composed of great numbers of units located throughout wide

areas. The greater the area the truer the average experience and the more accurate and less fluctuating the resultant charge. While a certain individual risk may for twenty or fifty years sustain no loss at all, many similar risks will burn during the same period, and the entire class to which it belongs may show an unprofitable record. Such a result must be reflected in the rates of all risks in the class. This is unavoidable. The money to pay losses must come from the premiums, and the very office of fire insurance is to distribute the burden which the loss consumption of the country entails. A proper share of that burden must be borne by each property owner, whether he sustains loss or not.

A False Premise.

But one step removed in fallaciousness is the claim, frequently made by newspapers and business men's organizations, that a profitable record in a certain city proves rates in that city to be too high. In the broad average essential to a safe continuance of the fire insurance business, the experience of one city, however large, is analogous to the experience on a single risk—and its significance is only measurably greater. While during a certain term of years the experience at an individual place may be favorable, yet at the same time in many similar places it may be the reverse, and there is no way to meet losses but to distribute them.

A concrete example will serve as an illustration. Let us suppose there are a thousand sizable cities whose losses are to be met out of the premiums which those cities produce under standard schedules applicable to local physical conditions. Experience in particular cities will vary. Sometimes one will be for a long time free from costly fires, while subsequently, during a series of succeeding years, from no apparent cause, its fires will be frequent and disastrous. For years before April, 1906, insurance companies found San Francisco the most profitable city in the United States. Over a term of years some of these thousand cities will have periods in which their percentage of loss will be high and other periods in which it will be low. Some cities will show a good profit for the whole term, while others will produce a heavy net loss. In a succeeding term the experience of each may be reversed, but if the losses of all are to be met, the premiums of each should be based upon the same schedule, in order that the combined insurance fund may not prove inadequate.

The Law of Average Is Immutable.

If rates are not to be averaged and prices are to be reduced at particular cities during periods of immunity, then, when fires at such places become numerous, the charge for insurance must needs be increased to a price which, in some cases, would mean ruin to their merchants to pay.

Quite as fallacious is the suggestion, now sometimes made, that rates in an individual State should be determined by that State's loss experience—although some gentlemen who occupy important political positions do not seem to appreciate it. We trust, if they contemplate acting upon a contrary conception, they will study the

question with care and avail themselves of the best fire insurance actuarial knowledge. As is true of cities, the loss experience of individual States varies greatly from year to year, even when no individually important fires occur. When conflagrations come the fluctuation is extreme. Those who claim that the experience of their own State should regulate insurance rates, and that their citizens should not contribute toward payment of losses in other commonwealths, must remember that in their own time of calamity even-handed justice would refuse to them aid from the premium-payers of sister States, and, contrary to the spirit of insurance, force them to bear disaster without the help of general contribution. Imagine what rates the citizens of Illinois would for many years have been obliged to pay if the insurance cost of the Chicago fire had been assessed upon them alone!

The History of the Hartford.

The Hartford Fire Insurance Company began to transact business in the State of Illinois in the year 1837. During the nearly thirty-five years which elapsed before the Chicago fire, it had accumulated a handsome profit in that State. Moreover, from 1871 to 1900 the average profit to the Hartford as well as other insurance companies in Illinois was higher than in most States, yet it was not until nearly 1900 that the Hartford's ledger for Illinois showed a profit; in other words, all the earnings of its business in Illinois from 1837 until nearly 1900—more than sixty years—were absorbed by the Chicago conflagration.

**Absolute Security and
Economy of
Management**

In what condition would the business of California be to-day if existing rates in that State reflected the unparalleled cost of San Francisco—a fire in which the Hartford alone paid a sum equal to nearly 75 per cent. of the entire annual premiums of the State? Similar questions could be asked respecting Massachusetts after the Boston fire, Maryland after Baltimore or Florida after Jacksonville. If New Orleans were destroyed, what rates would prevail in Louisiana if its citizens alone must shoulder the burden of the loss? What in Texas if Dallas burned, or in Kansas if one of its important cities were consumed.

Generalizing on a Particularity.

Again, if a State's individual experience must determine its rates, what shall be the rates on those classes of risks of which the State contains but few examples? The beet sugar factories of Michigan are an instance. They are not many, but represent an industry important to the State. If one of these valuable plants burn must the consequent loss be loaded on the rates of the State's few remaining establishments of the class? If Michigan were to refuse contribution toward the losses of other States, who would pay its beet sugar losses if not the remaining sugar manufacturers of Michigan? Abnormally high rates or no insurance would be alternatives, either of which would seriously handicap these manufacturers in competition with concerns of other States.

We say nothing against reduction of rates when circumstances warrant. Such a reduction, besides being just, is expedient from the standpoint of the companies. However solicitous he may be for individual success, no intelligent manager is willing to invite additional competition by efforts to keep prices above the line of a moderate general profit—and as a matter of fact the average rate of the United States is just now rapidly declining. As Mr. James J. Hill has said, "Steadiness of prices and profits is regarded by capital everywhere, and by every management intelligent enough to hold its place, as far more desirable than excessive price and undue profits."

But the point we are now considering is, "What is the true measure by which the reasonableness of rates may be judged?" Without vitiating the very underlying principle of insurance, we cannot assume that standard to be the experience of a single risk, or of a single city or State, but must be the broad average experience of the whole country.

Billy Sexton Speaks.

The Firemen's Fund, of 'Frisco, is one of the strong companies that has been in the crucible and its utterances are of value. From its enviable position and the following from its own "Billy" Sexton, on the subject of rating, is well worth while:

"Mischievous or misguided legislation against fire insurance companies interfering with unconstitutional rights of contract; taxing them excessively (6 per cent. or more) on gross instead of on net income; compelling frequent and expensive changes of blanks and

of methods for keeping their records must be paid for by the insured and are important items in the "too high cost of fire insurance to the people."

"Some of the States have attempted to cure the fire insurance evils by making rates for the companies instead of getting at the source of the trouble by legislating against the people who cause the fires and the losses, but such mistakes will soon be seen and avoided.

"Many new insurance companies have been incorporated; some have real money for capital, and if properly managed may be expected to live; others will die young, leaving their stockholders with more experience and less money than they started in with.

"There seems to be a growing tendency to reduce rates for fire insurance by legal restrictions directed against the companies instead of attacking the true source of the difficulty by inaugurating and enforcing proper building laws; however, the good sense of the people may be depended upon to eventually adopt proper means for relief in this respect as they have in many others. In the meantime insurance companies must make the best of the difficulties they are confronted with, simply hoping that they might live long enough to enjoy the future prosperity to be anticipated when property owners get a clearer idea of their relations with underwriters and the best methods to promote their mutual interests."

U. S. Fengado, No. 1 Montgomery street, Jersey City, has been appointed agent of the German Fire of Pittsburg, by Ward & Crawford. The same firm's Jersey City agency with Fischer & Smith has been discontinued.

The Chelsea (Mass.) Board of Control is advocating the construction of a fireproof warehouse, to be occupied jointly by the rag dealers of that city.

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

Men of Character and Ability are invited to apply.

Conn. Mutual Life Ins. Co.,
Hartford, Conn.

Please mention this paper.

The amended charter of the Pittsburgh Fire Insurance Company, which has had several changes of name since it was incorporated in the 70s, has been approved. The capital is to be \$100,000, with these men named in the reincorporation: James S. Hoon, J. S. Lecch, John S. Dilworth, Charles A. Colton, Samuel McClurke, William Philips and John A. Wilsen, all of Pittsburg.

AN INTERESTING SURETY SITUATION.

The Treasury Department furnishes "The Chronicle" its revised limits of surety companies on federal bonds as of March first. As usual, the 10 per cent. limit is on combined capital and surplus, but the department is beginning to recognize that its ruling must have some measure of flexibility and has, therefore, modified its original ruling as to reinsurance offsets.

This is the new list:

American Surety	\$562,784
Fidelity and Deposit	434,564
Fidelity and Casualty	356,423
United States F. & G.	244,766
National Surety	166,997
American Bonding	150,025
Title Guaranty and Surety ..	124,718
Massachusetts Bonding	70,006
Empire State Surety	60,058
United States Guarantee	60,053
Bankers Surety	55,346
United Surety	53,577
Peoples Surety	50,684
Southern Surety	47,172
Citizens T. & G.	46,013
Pennsylvania Surety	44,774
International Fidelity	39,258
Federal Union Surety	38,006
Pacific Surety	37,513
American Fidelity	33,805
Illinois Surety	33,272
Aetna Indemnity	32,646
Reinsurer:	
Guarantee Company of N. A.	50,000
	\$2,792,460

This indicates clearly the need of more capital and to it is already due the incentive of the casualty companies to enter the surety field. At present the possible bond that can be written is \$2,792,460, while in this day of big undertakings, like canal and water supply contracts, bonds in excess of that amount are required by law, and there's the rub.

However, when the Maryland Casualty, the Commercial Casualty, the Prudential Casualty, and probably the Continental—as rumored—is added, there will be combined resources sufficient to meet any demand. There are several companies under way, and at least two of those in the above list are increasing their capital, and this will also increase facilities for swinging big bonds. In addition some of the weaker companies in the list whose "society" is tabooed by the big fellows, are facing reorganization, which may make them also available for their limits in large undertakings.

It is in evidence that corporate suretyship has become a force as an essential accessory in business and civic life that will automatically maintain the impetus already acquired.

SILLY.

An amusing incident in connection with the recent unionization of the Continental is the charge by a non-union manager, well known for his positive opinions, that the insurance press was subsidized by the Western Union to attempt to stampede other companies into the union. This assertion would be taken more seriously if it emanated from some other source. It was only a few years ago that the same manager, then in the union, claimed that the insurance papers were subsidized by the Continental to take an anti-union position. At that time he advocated the starting of a company organ, under the direct control of the Western Union, to give out honest, unbiased news.

The suit instituted against the Kensington Mutual Fire Insurance Company and the Mutual Reserve Fire Insurance Company, both of Pennsylvania, to show cause why both companies should not be dissolved, will be defended. The attorney for both companies served notice on the Dauphin County Court that the action would be contested. The defense is based on the argument that although judgment had been rendered execution had not been served.

The application for admission of the Inter-Southern Life Insurance Company of Louisville, Ky., has been denied by William E. Hawkins, insurance commissioner of Texas, because the stock is not fully paid up according to law.

Philip De Q. Mesney has been appointed Chicago agent for the automobile department of the Insurance Company of North America. The fire insurance department of George L. McCurdy & Co., marine agents, has been transferred to Mr. Mesney.

H. D. Jones, superintendent of agencies of the National Union Fire Insurance Company, has resigned to assume a position in the office of the New York Underwriters' Agency, covering a portion of the Eastern field.

Louis M. Wise, Western supervisor of the Equitable Life, and F. G. Hogan, agency supervisor, have resigned to become general agents at Kansas City for the State Life for Missouri, Iowa and Kansas.

Plans have been completed for a new fireboat for Boston, which will make the third of the city's fire-fighting fleet. The keel will be laid in a week or two.

A HARD JOLT.

Mississippi has passed the bill which provides for interinsurance associations doing business in the State without supervision by the Insurance Department. This measure nullifies the recent Supreme Court decision, which held interinsurers accountable to the insurance commissioner. This will be a shock to Insurance Commissioner Darst, of West Virginia, who has quoted the Mississippi Supreme Court decision as the basis for his attitude toward the interinsurers.

Life Insurance Company
Springfield, Mass.

Incorporated 1851.

CHICAGO FOR ORGANIZATION.

The organization bee is buzzing merrily in Chicago casualty circles. The surety men have been organized for some time. Now the burglary insurance men are working in apparent harmony, although it would take but little underhanded work or violation of agreements to start another commission war. The automobile liability people claim that all but about four companies are doing business under an agreement and at least two of those four will probably be in soon.

By reason of their inability to get together on commissions, it is stated that they adopted a lower scale of rates than some of them wanted, but they have uniformity among the conference offices, and that is much gained. It will shortly put a stop to the practice of some brokers in "shopping" risks from office to office seeking the lowest rate.

Plate Glass Meeting.

Last week a call was issued for a meeting of the plate glass general agents and managers to be held Saturday, when it was hoped a start could be made towards an organization. Plate glass compacts in Chicago have met with such little success in the past that some of the leading managers are not enthusiastic on the subject of agreements. One or two who have spoiled compacts have learned a few things since, however, something may come of this movement.

AETNA INDEMNITY APPOINTMENTS.

The Aetna Indemnity Company has appointed the following agents for its accident and health department: Peter B. May at Terre Haute, Ind.; Albert H. Brosher at Portland, Ind.; Wilson & Willis at Sullivan, Ind.; Thomas L. McDonald, at Clinton, Ind.; W. G. Redfield, at Edwards, Miss.; Dennis C. Gillfillan, at Brazil, Ind.; Edgar S. Monks, at Winchester, Ind.; George T. Whitaker, at Dunkirk, Ind.; John N. Strickland, at Meriden, Conn.; Chas. W. Tator, at Bridgeport, Conn.; F. H. Sanborn, at Astoria, Ore.; Fulks & Johnson, at Dunkirk, O., and John N. Bonham, at Hartford City, Ind.

The Amicable Life Insurance Company, of Texas, has been organized at Waco. The authorized capital is \$500,000 and the proposed surplus \$500,000. Artemus R. Roberts is president and actuary.

Gross R. Scruggs & Co., of Texas, have been appointed general agents in that State for the Dutchess Fire of Poughkeepsie.

EXCELLENT APPOINTMENTS.

J. R. Wilbur and L. J. Braddock, both of whom have long been in the service of the Continental, have been appointed assistants to Secretary J. R. Tuttle, who will have charge of the Western department of the Continental and the Fidelity Underwriters on the removal to New York next month of Vice-President George E. Kline. Mr. Wilbur has been in charge of the special hazards department in the West and Mr. Braddock is one of the veteran examiners.

A charter was granted at Harrisburg, Pa., to the Stewartstown Mutual Fire Insurance Co. The officers are J. W. Anderson, president; J. G. Patterson, vice-president; J. Clay Anderson, treasurer, and Allen I. Fry, all of Stewartstown.

Plans were filed last Friday for the building to be erected by the Germania Life Insurance Company, at the northeast corner of Fourth avenue and 17th street. The building will be twenty stories and will cost \$1,000,000.

Frank H. Jones has resigned as special agent for the Aetna in southern Illinois to become special agent for the Hartford in northern Illinois, succeeding J. J. Johnson.

SPECIAL OPPORTUNITIES offered now in Southern States to Representatives of

---	--

THE PACIFIC SURETY MATTER.

The article regarding the Pacific Surety Company in "Underwriters Report," of San Francisco, referred to in these columns last week, is commented on by President F. B. Lloyd, of that company, in a letter to "The Chronicle" as follows:

You have no doubt seen the scurrilous and maliciously inspired articles that have recently appeared in the publication known as the "Underwriters Report." The persons responsible for their publication have taken care that they were generally circulated. Several thousand extra copies were published and mailed. I assume that you have not been overlooked.

The spirit actuating these articles is manifest. The fact that copies of these papers, which have been freely circulated to every bank and the majority of large institutions in this State were received, in most instances, for the first time, and, in addition, were marked copies, evidence the malice. I felt that people receiving this paper would appreciate that it was not sent them for the first time through motives of protecting the public, but was the action of envious and cowardly competitors.

I had believed that those associated with me had, and that I had, earned reputations in this State which would not necessitate a circular on this subject. It has been stated to me that an answer of some kind was necessary. In justice, therefore, to investors and insuring interests, and for their protection as well as ours, I lay the facts before you.

John C. Piver, the ostensible publisher of the "Underwriters Report," called upon me, at my office, and solicited an advertisement. I offered to pay the usual advertising rates for space in his publication, but he demanded five hundred dollars, and stated that if I did not give him this sum, that he would and could go to our only local competitors and get that much from them for "roasting" the company. He further stated that he could get that much fun out of "roasting" E. Myron Wolf, present Insurance Commissioner, who will be the vice-president of this company. Mr. Wolf has consistently refused to allow Piver to come into his office for the past three years.

I indignantly told him to "roast," etc., and threw him out of my office, as I would any other blackmailer.

Mr. Wolf's reputation is unimpeachable; his integrity has been established. He has unquestionably been the most efficient Insurance Commissioner the State has ever had. He has been tried in a way that no other commissioner has ever been tried, and his excellent record is known. Although he had made other plans for the future, Mr. Wolf was induced to affiliate with this company on account of its excellent prospects.

Redress in any form seems difficult of attainment. Piver cannot respond to a judgment for damages, and attorneys advise that the writer of these attacks has been quite dexterous in approaching, but probably avoiding the line of criminal prosecution.

The increase of capital stock was arranged by the former management before I had any connection with the company, and is being sold on its

merits, upon proper businesslike lines and among people who will be a factor in building up the company. It is worth the money that is being asked for it, and it is being sold under the personal direction of the writer and no one else.

The proceedings in connection with the increase of the capital stock have been passed upon by the Attorney General of the State and found to be in accordance with the law.

The former president, Mr. Wallace Everson, severed his connection with the company in a spirit of kindness and good feeling.

The success that has been attained in disposing of the stock and securing desirable business through the medium of its new stockholders, is gratifying. There is not a stockholder in this company, nor any one financially interested in it, who has a word of criticism for the management. What I have been doing and am doing is clean and above board. There is no inquiry or investigation made in good faith that would not be welcomed.

I have too much confidence in the good sense and fairness of the people whom these articles are expected to influence to believe that attacks inspired as these are, stinging with slander and boughten purpose, circulated at the request of no one in their receipt, and with such open intent, will have any effect other than to react upon those who have instigated them and strengthen permanent faith and loyalty in this company and its great future.

A Vicious Attack.

A careful and analytical reading of the two-page paranoical attack by the "Underwriters Report" on the Pacific Surety Company and its president and vice-president-elect, fails to reveal any creditable motive; on the contrary, its very virulence and violence evidences spleen and "getting even."

The Pacific Surety is the second oldest surety company in America, and has had a long and highly reputable career. Its new president, F. B. Lloyd, is recognized as the ablest surety manager on the Pacific Coast. Until this connection he was San Francisco and Coast general agent for the United States Fidelity and Guaranty Company, of Baltimore, and built up the largest surety office on the Coast. The vice-president-elect is E. Myron Wolf, the present Commissioner of Insurance of California, who will retire at the nearby end of his term to take up the new duties. The other officers and the directors of the company are men of high standing in their own community, and the financial statement of the company shows it sound and healthy. It has paid six per cent. dividends consistently for more than ten years past, beside adding to its surplus. For conservative management it cannot be surpassed by any insurance company. Therefore, the animus of the attack seems purely personal and for that reason entirely negligible.

The "Insurance Press" of yesterday

prints the following alleged information from 'Frisco on this subject:

Piver Arrested.

John C. Piver, publisher of "Underwriters' Report," was arrested in this city on Saturday on a charge of criminal libel, preferred by F. B. Lloyd, president Pacific Surety Company, who alleged that he was libelled by an article in the publication on March 17.

The first article of the series charged that President Lloyd had entered into a deal with O. L. Van Laningham to sell for \$2,500,000 capital stock of the surety company for which the two paid \$375,000 in December last. Mr. Piver declared that high-pressure methods and unwarranted estimates of future profits of the company were used to aid in the sale of stock to small investors.

Mr. Piver said his arrest would bring before the public facts that would end the promotion of the Pacific Surety enterprise on present lines.

The collapse of the Consolidated Casualty Company, that awfully high-browed and big brained monkey doodle company, headed by R. B. Armstrong, late "Honorable," because he had held political office in Washington, is in the nature of a pathetic tragedy and verifies the old adage about fools rushing in, etc.

The next annual meeting of the Southwestern Underwriters' Association will be held at Hot Springs, Va., on May 18-19.

On January 1, 1909, rates were reduced
and values increased to full 3% reserve.

EDITOR ALISON RETIRES.

In the current issue Stephen H. Alison announces his retirement next Thursday as president and manager of the Vindicator Publishing Company, Ltd., and also as editor, having disposed of his entire interest in both "The Insurance Vindicator" and the "Southern Insurance Directory" to William Pfaff and D. R. McGuire, who assumes full responsibility for both publications on and after that date.

The able Alison will be missed from the circles which he has so well adorned and edified.

Insurance Commissioner Hawkins, of Texas, is doing things to the companies. He has assessed the companies doing business there 3 per cent. of the premiums collected by them in 1910 to defray the expense of preparing and applying the new rating schedules required by the Texas law. This expense has been figured at \$212,000, covering the \$5,000 salary of Manager Roulet and the salaries and traveling expenses of sixty-five inspectors, four chief raters and three fire protection engineers.

The project to improve the north-east corner of John and Dutch streets with a 16-story office building, launched some time ago, will be started in the near future. The project is that of the Underwriters' Building Company, which leased the ground from the Reformed Dutch Church for 84 years. Plans for the structure have been filed and the cost is estimated at \$600,000.

An examination of the Consolidated Casualty Company is being made by the West Virginia Insurance Department, the company having been chartered in that State. It is only a few weeks ago that an examination was made and this fresh one arouses many comments.

A bill to incorporate the Baltimore Bonding & Fidelity Company has been introduced in the Senate. The capital stock is limited to \$500,000 and permission is asked to do a fidelity and surety business.

Charles J. Okell & Co., general agents of the Employers' Liability Assurance Corporation at San Francisco, have removed their offices into larger and more convenient quarters in the Royal Insurance building.

President Henry Evans of the Fidelity-Phenix is not yet prepared to say whether or not his company will apply for membership in the Eastern Union.

Chicago's and the Northwest's leading insurance journal, the "Western Underwriter," is opening an Eastern office in New York April 1, under the direction of George H. Holden, who is now connected with the "Weekly Underwriter," as reporter. The report is that this means the acquisition of one of the New York insurance journals to be conducted in conjunction with the "Western Underwriter."

Ernest J. Miller, assistant superintendent in charge of the burglary department of the National Surety, has resigned to become burglary manager for the Prudential Casualty, of Indianapolis, just organized and licensed by Indiana. The National has not announced a successor, but at the munificent salary of \$1,320 paid Miller, it is probable that it will be difficult to find one.

D. E. Monroe has been appointed Illinois State agent for the National of Hartford, succeeding H. F. Espenscheif, who resigned to go into the local agency work. Mr. Monroe was for several years a special for the National in Illinois, and was transferred to Iowa a few months ago.

Chief of Detectives—Now give us a description of your missing cashier. How tall was he?

Business Man—I don't know how tall he was. What worries me is that he was \$25,000 short.—"Philadelphia Record."

The Niagara has gone on the sole agency basis at Cincinnati, appointing E. E. Shipley as manager for Hamilton County. The agencies heretofore with Fred Rauh & Co. and Carl Kleve & Co. are taken up.

Governor Hughes, of New York, has signed the bill appropriating \$54,266 for salaries and expenses of the State Insurance Department for the remainder of the year.

Reference to the next General Court has been reported by the Massachusetts insurance committee on the bill petitioning for a charter for the National Automobile Insurance Company.

The Republican Assurance Company, proposed capital \$2,000,000 and surplus \$3,000,000, to write fire and marine, is the latest New York proposition.

An executive meeting of the Illinois Fire Insurance Commission was held in Chicago yesterday, to prepare for a special hearing in April.

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.88
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of \$2,710,650
And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Further Evidence of Legislative Graft.

At last Friday's session, "In the Matter of an Investigation of the Insurance Companies Doing Business in the State of New York in the Years 1900 to 1910, Inclusive, and Particularly as to Expenses and Disbursements of Such Companies," as conducted by Superintendent Hotchkiss, of New York, William H. Buckley, former legislative attorney-at-large, was the chief witness. His testimony was not in any sense voluntary. His only explanation of all the interesting correspondence that passed between the late George P. Sheldon and himself was "the letter speaks for itself."

Superintendent Hotchkiss made strenuous efforts to procure admissions from Buckley that he represented the law and legislation committee of the New York Board of Fire Underwriters in his legislative work. This Buckley vigorously denied, insisting that he only knew Mr. Sheldon in such matters and was paid by him for his work.

Phenix Loans to Buckley.

The correspondence offered in evidence seemed to show that Buckley had procured loans of \$48,000 prior to his retirement from the Insurance Department in March, 1901, and that these loans were taken over by the Phenix Insurance Company by a series of indirect transactions. One of these was the transfer of a \$13,000 loan from the books of the North American Trust Company to those of the Phenix by the much-talked-of check drawn to E. E. McCall. Another check for \$35,000, drawn by the Phenix to Buckley's account was not indorsed by Buckley, but was indorsed by McCall, with Buckley's name, for reasons which Buckley, when questioned on the witness stand, would not specify.

Besides the mention of Justice McCall, another prominent New Yorker's name was brought into the limelight, that of former Comptroller Edward M. Grout, who appeared as having played an active part in legislative attempts to tax insurance reserves in 1903. This bill was the McKeown bill, and the predecessor of the Grady bill of 1904. The correspondence between Buckley and Mr. Sheldon was most interesting from a political standpoint, inasmuch as they showed the possible connection between many prominent men of this State and certain strike legislation.

Andy Fields Redivivus.

On March 23, 1903, Buckley wrote to Mr. Sheldon regarding some adverse measures which had unexpectedly been taken out of committee:

"On the arrival of General Fields to-night we got to work at once, with the result that several bills were either recommitted or held up in committee in both houses."

Actuary Dawson Tells of Request for Bribe Money.

In the afternoon session Miles M. Dawson, consulting actuary, was put on the stand and testified that he went to Albany in 1905 on behalf of the Washington Life Insurance Company, in connection with a bill which was advocated by that company and some other life insurance companies, which wrote their policies as preliminary term. He said Buckley, whom he identified as the former witness and who was known to him as representing the Provident Savings Life which was also in favor of the bill, came to him and said that the bill could not pass unless some money should be provided for the "boys." He suggested that as Dawson would probably receive a good sized fee, he divide it with those who could help the

bill through. The witness stated that he told him he was not there to bribe anybody; and that if the bill could not pass without that, it would never pass. It did not.

Monday's Session.

Among the interesting features developed Monday was the admission by William Bro Smith, counsel of the Travelers Insurance Company, of Hartford, that his company paid \$21,450 to Buckley for services rendered in 1903.

Mr. Bro Smith said that that year the law creating a liability claim reserve was passed by the New York legislature and that his company favored it. He said he believed that the payments to Mr. Buckley had something to do with this measure, but also stated that the company's regular Albany attorneys, Rosendale & Hessburg, also represented them in connection with this matter, and were paid \$450 for their services. Further, he stated that he personally attended the hearings on the bill. He stated that his company had never before or since employed Buckley.

Buckley Withholds Consent to Examine Bank Account.

It developed that Buckley, who at the closing session last week stated that he was willing to have the Superintendent of Insurance examine his bank account, immediately afterward notified the National Commercial Bank, of Albany, not to give any conscript of his account from 1900 on to the Insurance Department. In view of the fact that Superintendent Hotchkiss had already shown that Buckley had received at least \$100,000 in his five years of legislative service, the examination of this account might have shown that perhaps his legal

(Continued on Page 6.)

IS NOT THE TIME OPPORTUNE?

Actuary Dawson Addresses Readers of "The Chronicle."

It is very much to be hoped that in addition to President Kingsley, of the New York Life Insurance Company, and myself, who have both testified that Mr. Buckley, whose relationship with the enactment and repeal of legislation is now under investigation, asked us for money to bribe legislators, persons connected with insurance companies, or acting for them directly or indirectly, who know more definitely that such use was made or was to be made of money paid, the names of legislators to whom the same was paid, or to be paid, and, if possible, that it was so paid, should come forward at this time and remove all uncertainty, both as to what was being done and as to who were some of the legislators at least, who were thus in effect blackmailing the insurance companies.

I am well aware that there is deeply ingrained in every honorable man an indisposition to "snitch," and that this is doubly so, when, perhaps, his name has not been brought forward and might conceivably not come forward; and this is particularly the case when his own conscience is clear and he feels that whatever was done was, so far as his part was concerned, virtually under duress, and much as if a loaded revolver had been pointed at his head, with the exclamation, "Your money or your life!"

The Present Moment Opportune.

But the present conditions are peculiar in that they offer a well-grounded hope for a complete and permanent escape of the insurance interests of the State of New York—and through the example which the State of New York may afford, the insurance interests of all the States—from ever again being victimized in a similar manner; and this hope may be dashed by the failure thoroughly to ventilate what has taken place in the relatively recent past.

Already at the very time when these various heavy disbursements were being made through Buckley—and for the most part yet heavier disbursements through other men engaged in a similar occupation—the conditions had, in my humble opinion, so far changed that nearly, if not quite, all the money so spent was thrown away, and the object, especially when it was an honorable object, could and would have been secured even more certainly without this expenditure.

The Story of the Tax Bill of 1901.

An illustration in point is the defeat of the tax bill of 1901. It is my

conviction, based upon a reasonably intimate knowledge of what honorable and intelligent arguments, directed at the head rather than the pocket, were presented at that time, that the amendment of the bill so as to change the basis of taxation from the surplus to the premiums received in the State of New York, and also so as to apply to all companies, and not to New York companies, only, was made at the direct request and upon the consent of Governor Odell, and because he became convinced that a tax upon surplus would put the New York companies at a serious disadvantage in competition, which would cost them many times as much as the tax and be of no benefit to the State in any way, but of great injury. Persons who were present at the hearing at Albany will recall that this view was obviously taken by members of the Senate committee, and especially by Senator Crum and Senator Higgins, afterward governor of the State, who virtually announced themselves as so convinced while the hearing was still in progress. It is known to many that the amendment of the bill was consented to by the governor that very evening after a conference with certain members of this committee and at least these two senators against whose integrity nothing has ever been brought, or, in the opinion of those who know them, could possibly be brought, and that his decision presumably was the result of this conference.

This is also supported by the fact, which is well known in many circles, that a very powerful man, then vice-president of one of the large companies had gone to the governor, who was shown by the Armstrong Committee to have known of the liberal contributions to the campaign funds, and also doubtless knew the ins and outs of the under ground operations of Buckley and men like him at Albany, and Governor Odell cut short the conversation by saying that the bill would pass without the dotting of an "i" or the crossing of a "t," and that legislators, if there were any, who sold themselves to vote against it, had best look out.

Can Respectable Legislators Support the Companies' Views.

It will be recalled that this bill, when introduced, was referred to the Senate committee of insurance and reported favorably immediately, and without a hearing, and that it required a great deal of agitation to cause it to be re-committed for a hearing. It was my fortune, whether good or ill, to join in this support and to approach with the request that they vote for re-committal upon the ground

that common fairness required it, several of the ablest senators, being men whose integrity is above suspicion. Upon the injustice of the action of the Senate committee being pointed out, they one and all consented to vote for re-committal, with instructions to grant a hearing; and one of them, Hon. N. A. Elsberg, in making the statement that he would do so, significantly said:

"I am convinced that re-committal with instructions to grant a hearing is demanded as a matter of fairness, and I shall vote for it; but I tell you right now, Dawson, that while I know that there are honorable insurance bills which come before the Senate, and I do not believe that you would give your support to any which are not honorable, these insurance people have created such a situation in Albany that it is almost equivalent to acknowledging that you are bought, to vote for any bill which they want or against any bill which they oppose."

Shall Such Conditions Rule Again?

It is certainly worth while to do away with such conditions and to create the condition that the insurance interests of the State of New York can go to Albany for meritorious legislation or appear there against legislation which is injurious and unjust, and may be assured that every honest man in both houses will feel free to champion their measures and

oppose strike bills against them, without being subject to the suspicion of carrying their money in his pocket.

There may remain in some minds, however, the question whether there is such a prospect of accomplishing this most desirable object, that men upon whose shoulders rest the responsibilities concerning our insurance companies should be moved to disregard their own disinclination to keep out of the limelight and should at whatever apparent sacrifice to themselves, render assistance at this time to bring these matters to light.

It is not possible to say what legislation can be added to that which is now on the statute books under and by means of which such conditions as these will be avoided; but a reform of our primary laws, a reform of party organization, more complete responsibility to the voters of the State on the part of the party in power for all legislation, the doing away of professional privilege on the part of attorneys so far as accounting for money expended on behalf of their clients in connection with legislation is concerned, and various other alterations in our law and practice are already indicated and doubtless others will suggest themselves to minds more astute than my own, as the investigation progresses. It is an old saying in equity that "there is no wrong without a remedy" and certainly the ingenuity of those who desire the right is fully equal to the ingenuity of those who wish to corrupt legislation if the devious paths of the latter are once thoroughly exposed to the observation of all.

MILES M. DAWSON.

URGES FEDERAL CONTROL.

On Tuesday last, before the Life Underwriters Association of Western Massachusetts, Darwin P. Kingsley, president of the New York Life, made a strong plea for federal control of insurance companies.

President Kingsley took exception to the opinion of United States Senator Elihu Root that federal supervision had reached the limit of its powers, and warned him that such control of insurance companies was demanded by the people. He said in part:

"As a result of the methods by which it is now regulated and controlled, life insurance finds itself in the very forefront of those interests which are demanding a wider use of federal authority, a broader interpretation of the enumerated powers of Congress, a further application of the substantially unlimited powers of the Federal Supreme Court. There has never been a moment since 1789 when

the seeming conflict between national power and the rights of the States has not been in the hearts, if not on the lips, of our citizens and lawmakers.

"Cries for federal control are the growing pains of a great people. Let Senator Root and all others who are leaders make no mistake. The people of the country are not afraid of themselves, and they are no more doubtful of their power as citizens of the United States than they are of their power as citizens of the States. They see their opportunity and they will not run away from it. On the contrary, they will crowd every opportunity."

SUICIDE OF INSURED.

An insurer in a life policy stating that on the death of insured by self-destruction, sane or insane, the insurer shall be liable only for the returns of the premiums paid, is liable for the face of the policy where insured at the time he killed himself was so insane that he did not know that he was taking his life, or did not know that the act he was committing would probably result in death.—Inter-Southern Life vs. Boyd, 124 S. W. (Ky.) 333.

A WELL DESERVED PROMOTION.

The promotion of Dr. Lee K. Frankel to the position of an executive officer of the Metropolitan Life Insurance Company, with the title of assistant secretary, is well received in insurance circles, where Dr. Frankel has been making hosts of friends and attracting generally favorable attention since his entrance into life insurance.

Attorney General O'Malley, of New York, has advised Superintendent Hotchkiss that assessment life and casualty associations cannot insure the lives of minors, according to the present insurance law.

The Gibraltar Life is being organized at Indianapolis by W. J. Love and several other former agents of the Prudential, its name being taken from the well-known Prudential trademark. They propose to write industrial insurance and offer as a novelty a policy to be sold as low as a penny a week.

ASSESSMENT POLICYHOLDERS OF MUTUAL RESERVE NOT LIABLE FOR ASSESSMENTS.

Judge Ward, of the United States Circuit Court of the Southern District of New York, handed down on Wednesday of this week, March 30, a decision in four suits brought on behalf of the receivers of the Mutual Reserve Life Insurance Company to enforce the collection of assessments. The court holds that the assessments are uncollectible, because levied when the company was insolvent, because the policies provided against "personal liability," because the contract consists of "the application, the certificate and the by-laws," and because the company had changed the rates of assessments without the consent of the members, which the Court of Appeals of New York recently decided to be a violation of the contract.

The opinion of the court is as follows:

December 16, 1907, the directors of the company, it then being in point of fact insolvent, adopted a resolution levying an assessment on all holders of its certificates subject to assessment, payable within thirty days from January 1, 1908. The company was put into the hands of receivers February 15, 1908. The defendants were members in good standing at the time they were assessed and admit that their failure to pay terminates their membership. But they say that this is the only consequence, they not being personally liable to pay the assessment.

The certificate of the defendant O'Donoghue was issued February 6, 1883, and it was agreed therein that the company would upon his death pay \$5,000 from the death fund or the next assessment or from the reserve fund and not otherwise and that the certificate was to become null and void upon his failure to make any required payment. It contained no express promise upon his part to pay assessments, but the plaintiffs contend that one must be implied. The Appellate Division of the Second Department of the Supreme Court of New York has so held in the case of *Gray v. Daly*, 40 App. Div. 41. The question has never been decided by the Court of Appeals of New York. The contract of the certificate holder is with the company and is in consideration of actual *bona fide* continuing insurance. If the company is insolvent when an assessment is levied this consideration fails and it would seem to be unfair to require a member to pay for something he is not getting. This view is forcibly expressed by Judge Blodgett in *re Protection Life Insurance Company*, 9 Bissell, 188, 196, and his remarks are cited with approval in the *Matter of Equitable Reserve Fund Life Association*, 131 N. Y., 354, 377. I am of opinion that a promise to pay may be implied in the case of O'Donoghue, but I think that he is excused from paying because of the insolvency of the company.

The cases of the other defendants

are clearer. Gallert's certificate was issued January 9, 1891, and contained this provision:

"II. No personal liability is incurred by becoming a member of this association. The contract is a bi-monthly term insurance renewable at the option of the member before expiration upon payment of mortuary premiums and dues at the times and in the manner herein provided."

And upon the back of the certificate is printed:

"This policy expressly provides that no personal liability shall be incurred by becoming a member of this association. Payments are at the option of the member to continue only so long as the member may desire to keep his policy in force."

And the application contained the following:

"Conditions upon which this application is made are that no personal liability of the applicant shall be incurred by becoming a member of the association. Payments by the member are voluntary at the option of the member to continue them as long as the member may desire to keep the said certificate or policy in force."

Dempsey's certificate was issued January 21, 1893, and it, as well as the application, contained the same provisions as Gallert's.

Ritchie's certificate was issued February 1, 1901, and called for a fixed annual premium without any liability for assessments at all. It contained the following provision:

"II. No personal liability is incurred by becoming insured in this association."

As the contract between the certificate holder and the company is to be ascertained from the application, the certificate and the by-laws, *People v. Grand Lodge*, 156 N. Y. 533, 537, it seems to me quite plain that the defendants, Gallert, Dempsey and Ritchie, are not liable for the assessment.

The plaintiffs, however, contend that because section 210 of chapter 690 of laws of 1892 (before which date the certificates of O'Donoghue and Gallert were issued) require every life or casualty insurance company doing business on the assessment plan to specify in its certificates the amount to be paid and because section 207 authorizes the Superintendent of Insurance to apply to the Supreme Court for an order to show cause why such an association should not be restrained from doing business if the matured claims exceed its assets and assessments made or in process of collection, certificate holders are required by law to pay assessments. Otherwise they say the provision of section 210 cannot be carried out. But I think these provisions do not affect the contract made between the certificate holder and the association, and are merely intended to provide a method of determining when proceedings may be instituted to wind up such associations. In view of the obvious purposes of the insurance law, the Attorney General might well advise the Superintendent of Insurance to withhold his approval of such certificates as these defendants held, but it does not follow that they can be construed by the court to be other than their terms make them.

Another ground of demurrer is that the assessment was at higher rates

than those fixed in the certificates of O'Donoghue, Gallert and Dempsey. A stipulation has been made of this fact. This is sought to be justified by provisions of the by-laws giving the directors authority either expressly or impliedly to fix rates of assessments. The certificate holders having agreed to be bound by the by-laws, it is argued that they are bound by assessments so fixed. But the Court of Appeals of New York has lately held that such by-laws do not authorize the directors to alter any material provision of a contract theretofore made, *Wright v. Knights of Maccabees*, 196 N. Y. 391, and *Dowdall v. Supreme Council*, id. 405. No estoppel arises from the fact that the defendants had on previous occasions paid assessments levied at rates higher than those provided for in their certificates.

L. A. Greenwood, for five years manager for the life and accident department of the Travelers in Chicago, has taken a similar position at Los Angeles in order to be near his family, exchanging positions with Erwin J. Mumua, who will go to Chicago as soon as Mr. Greenwood is installed.

Under a ruling by the Attorney-General the Washington Insurance Department has barred eight assessment companies, including the Western Life Indemnity Company, of Chicago.

THAT ASSEMBLY RESOLUTION

On the last day of March, the Ways and Means Committee of the lower house of the New York legislature decided to report favorably the resolution of Assemblyman McInerny, of Rochester, calling for a legislative committee to investigate all insurance companies, except life, appropriating \$25,000 for its expenses and giving authority to examine witnesses under oath and to employ counsel.

This resolution was offered on January 17 last, and so before the investigation by Superintendent Hotchkiss was inaugurated. Doubtless it would never have been heard from had there been no such investigation. Yet the best possible reason why it should not be adopted, is that the superintendent of insurance not only has the power under the existing law to carry his researches as far as he deems proper, but also obviously has the disposition and the ability to do so. Moreover he commands the confidence of the entire State, while it is not too much to say that the New York legislature, as at present constituted, does not.

Superintendent Hotchkiss, being interviewed upon the matter, expresses his willingness to welcome the help of the legislative committee and to co-operate with it; but the question still remains, "Cui bono?"

HEARING ON AMENDMENTS TO SECTION 96.

On Wednesday of last week, there was a hearing at Albany before the assembly committee on the amendments to Section 96, relating to the limitation of new business, offered on the recommendation of the superintendent of insurance.

There were present at the hearing Hon. W. J. Tully, counsel for the Metropolitan; Edward D. Duffield, counsel, and F. H. Johnston, associate actuary of the Prudential, and E. J. Heppenheimer, president of the Colonial, all of them objecting to the proposed limitation of the ordinary business of industrial companies. There were also present Vice-President E. E. Rhodes, of the Mutual Benefit, and Vice-President A. A. Welch of the Phoenix Mutual; William Bro Smith, counsel of the Travelers; Hon. Robert Lynn Cox, manager of the Association of Life Insurance Presidents; James H. McIntosh, counsel of the New York Life, and Hon. Alfred Hurrell, counsel of the Insurance Department. Messrs. Tully and Duffield pointed out that the limitation would very materially reduce the amount of ordinary business which their companies

were now transacting, and Mr. Tully stated that not long after July 1, were the bill to pass, the Metropolitan would be compelled to cease doing ordinary business for the remainder of 1910.

Mr. McIntosh thought the bill fair if the policy of limiting new business was to be persisted in, but argued for repeal on the ground that the other provisions of the laws, limiting expenses and contingency reserve, and requiring the declaration of dividends annually, were adequate to enforce economy, which was the sole purpose of this provision.

Mr. Rhodes pointed out that under the retaliatory laws of various States, such as New Jersey, if a home company were driven out of New York by reason of a provision such as this, cancellation of the license of all New York insurance companies might result.

The committee will hold another hearing on April 5, at which time, likewise, the proposed amendments of Section 97 will be discussed.

IS THIS AN IMPROVEMENT?

The Great Western Life Insurance Company, which, according to a veracious contemporary "is showing substantial progress under the present management," is issuing the "guaranteed dividend" or "coupon" policy, of the same nature as that which was the subject of controversy between the Louisiana National Life Insurance Company and Commissioner McGivney of Louisiana some months ago, the company abandoning the policy after being convinced that its suit to restrain the commissioner from interfering with it was going against it.

If the scheme of "guaranteeing" for the payment of a sum of money represented by a "coupon," which sum of money is to be paid out of the premium that the insured is then

to hand over, is especially meritorious and deserving of three columns in an insurance newspaper strictly upon its merits, the most astute and painstaking observers have not been able, with the use of powerful microscopes, to discover the aforesaid merits.

A. A. Allen, president of the Los Angeles Fire Underwriters Association, has resigned that position in a huff. The board opposed his plan for changing the present brokerage rule there.

NOTEWORTHY ADVANCE.

The
BERKSHIRE LIFE
Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy-year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

FURTHER EVIDENCE OF LEGISLATIVE GRAFT.

(Continued from Page 1.)

fees had been considerably larger than those discovered, and that others in the vicinity of the State House were participants in these enormous emoluments.

President George F. Seward, of the Fidelity and Casualty Company, identified Edward A. Brown, of Middletown, N. Y., as, to the best of his recollection, the man who proposed to him eighteen years ago to kill a bill then pending in the legislature of New York State which, according to President Seward, threatened the very existence of his company, by the payment of \$10,000 to Big Tim Sullivan, for whom he was acting as henchman.

In his characteristic way that grand old Roman testified that he told Brown to tell Tim to go to h—.

"Hewing to the Line, the Chips Fall Where They May."

While evidently it is only the intention of the superintendent to reach the grafters at Albany and not to injure insurance interests, there were indication that he is following the old motto, "Hew to the line, let the chips fall where they may," as the afternoon session developed.

Besides the correspondence between Buckley and Sheldon he placed on record those from Buckley to C. F. Sturhahn, general manager of the Russia Insurance Company.

The remainder of Monday's session was almost wholly taken up by the reading of letters from Buckley to Sheldon and the unsuccessful attempt of Mr. Hotchkiss to get admissions from the witness.

Wouldn't Insult "Sen. B." With \$500.

Among those referred to in the correspondence was a Senator B., of Saratoga, presumably "Senator Brackett."

On October 18, 1904, Buckley wrote Sheldon as follows:

"Regarding the Saratoga party, I do not think you would want to give him less than \$1,000. If there are three in the matter it should be \$1,500, and I think the latter figure would be very satisfactory.

Mr. Sheldon finally sent a check for \$500 as his company's contribution, but failed to get funds from the other companies referred to. Buckley returned this check in a letter in which he said:

"It is to be regretted that some of those associated with you in the same kind of business are not so farsighted as you are, and it is too bad that you are obliged to be annoyed because

of their failures. However, we shall have to see what the future will do."

Tuesday's Session.

The most amusing feature of the hearing to date was the presentation of a letter from Buckley to the late George P. Sheldon, written shortly after the selection of the present Superintendent of Insurance for that office, announcing that he (Mr. Hotchkiss) was "absolutely all right and it would mean the retention of all our friends at both ends." But the real sensation was the testimony of Darwin P. Kingsley, president of the New York Life Insurance Company.

Sure About Hotchkiss.

The letter reads as follows:

"The new man named will probably be confirmed in time. He is absolutely all right and it will mean the retention of all our friends at both ends. I tell you this so you need have no concern about any new head coming in to take an initiative that might cause you trouble directly or indirectly. There is not the slightest reason for you to be concerned. Everything at both ends is all right and I have the best of assurances of that fact. Why don't the Board of Fire Underwriters or the men connected with them create a place for Ike Vanderpoel that will pay him between \$4,000 and \$5,000 a year. He is a very valuable fellow and I am anxious to see him located some place where his efforts can be made use of and there is no field that he is better qualified for than the fire field. I wish you would see what you can do with reference to it."

President Kingsley Was Also Asked for Bribe Money.

Mr. Kingsley said that while he was vice-president of the company he went to Albany in the spring of 1906, when the Armstrong insurance laws, as the result of the life insurance investigation, were pending in the legislature. He sought there to secure the passage of an amendment to prevent the lists of policyholders being made public.

Mr. Kingsley's testimony was in part as follows:

"Senator Horace White introduced this amendment, and it was carried on the first vote by a very small majority, some two or three only, I think."

"I was spending the evening after this vote in the Senate at the Ten Eyck Hotel. Some one called me on the telephone. I don't know who it was; it might have been Mr. Buckley.

"The voice remarked that while I had won a great victory that day, nevertheless, unless I were to lose it, I must have help. The voice advised me to walk up to the Capitol from the Ten Eyck and on the right hand side of the street I would meet some one who would talk to me and would tell me how to hold the victory I had won. After dinner I put on my hat and walked up the street toward the Capitol. In a doorway was standing Mr. Buckley, apparently waiting for me. He said to me as I recall, 'Well, you won a very notable victory to-day. They will take it away from you unless something is done.'

"I said, 'How can they do that?' He replied to me, 'The wheels are busy right now, but it needn't happen if something is done right now. For \$3,000 I can deliver you six votes in the Senate.' 'Well,' I said, 'I can't do that kind of a thing, Mr. Buckley.' He said, 'What are you up here for? Did you come here to run a Sunday school? You know this is Albany.'

In his own words Mr. Kingsley said his reply to Buckley was as follows: "There is one thing I won't do; I won't sacrifice my self-respect, and I won't give you a damn cent."

When placed on the stand Buckley denied that he had ever agreed to deliver senators at \$500 a head.

Buckley Didn't Succeed in Holding Up Mutual Reserve.

George D. Eldridge, a consulting actuary and formerly actuary of the

Have you seen the new policy of the PHILADELPHIA LIFE?

Agents are certainly writing business under this contract and an opportunity is presented to you to get busy on this. I don't say that there are not other good companies beside the Philadelphia Life and I don't want to disturb agents who are working for other companies, but if you are dissatisfied and are going to make a change, I think the Philadelphia Life is the Company you should be with and make it your last change, because with the Philadelphia Life you can do as much business as you want to do each year and make as much money as you want to make and if you don't make it it is your own fault.

Write PERRY to-day.

PHILADELPHIA LIFE INSURANCE COMPANY.
Philadelphia, Pa.

Mutual Reserve Life Fund and the Mutual Reserve Life Association, testified that he knew Buckley while he was third deputy in the Insurance Department and had met him several times. Regarding legislation in 1900 and especially the amendment to Section 52 of the insurance laws, the witness said he frequently talked with Buckley when he went to Albany and discussed the merits of the bill, which was passed May 10, 1901. He said that Buckley presented a bill for services of \$5,000, which the company considered altogether too high, especially as he had never been retained in any capacity. The counsel of the company offered \$500 as a compromise and recommended that if he declined he be allowed to sue, which he never did. Attorney Hurrell of the department said, "That was a strike that failed," to which Buckley took exception, without avail.

The Jakor Gets a Bargain.

It developed that the Jakor Insurance Company, of Moscow, was able to procure the services of Buckley for \$500 in connection with the company's admission to all States, whereas Buckley had collected \$3,500 from the Russia for services in connection with its admission to New York State alone.

Thursday.

At this morning's session Edwin E. Clapp further identified Edward A. Brown of Middletown as the go-between who offered to enlist the services of "Big Tim" Sullivan for \$10,000, in smothering a bill in 1892, referred to previously by President Seward, of the Fidelity and Casualty Company.

John B. Lunger, vice-president of the Travelers Insurance Company, was then called to shed what light he could on the payment of \$21,450, in 1903, to Buckley, as testified to previously by William Bro Smith, general counsel for the company. Although quizzed severely by Superintendent Hotchkiss, Lunger was unable to tell why he and the officers of that company considered that a lawyer who had been practicing but two years could render such services in four months as to be worth \$21,450 to the company. When questioned by Deputy Hadley, Mr. Lunger's memory also failed him as to why the bill placed before the Connecticut legislature and up for the governor's signature had been amended to meet the conditions of the bill before the New York legislature. However, Mr. Lunger declared vehemently that his company had never attempted to stifle competition, let alone backing legislation which would have this effect.

A STIRRUP CUP.

George E. Kline comes to a more responsible position in New York this week. He was the guest of honor at a farewell luncheon last Sunday at the Union League Club in Chicago, given by the other fire insurance managers of the city. Mr. Kline, who has been vice-president of the Continental, in charge of the western department, has been given supervision at the home office in New York as underwriting for the Continental, the Fidelity-Phenix and the Fidelity Underwriters, the largest fire insurance combination in the country.

The high regard in which Mr. Kline has been held by his associates was shown by the large and representative attendance.

Mr. Kline responded that the friendship and the good fellowship that prevailed in the west were priceless to him. It is known that Mr. Kline tried hard to avoid leaving Chicago, that he departs from the city in which his entire business life has been spent with great reluctance.

His underwriting ability had gained him fame and it was useless to resist the current of advancement now at hand. And so New York's fire underwriting circles gain what Chicago loses—a high type of the profession.

The Towner Rating Bureau, of 100 Broadway, which supplies advisory rates to the members of the Surety Association of America and other surety companies, has decided to adopt the loose-leaf rate book system formulated by the Empire State Surety Company, and will shortly commence supplying its members with the new form of rate books.

Mark R. Buxton, special agent of the Granite State and a member of the agency firm of Buxton & Crowley, Nashua, N. H., died suddenly yesterday in that city.

GOING SOUTH.

W. L. Steele, western manager of the Niagara, has returned from a month spent on his grape fruit plantation on the Isle of Pines, a section of Cuba. Investments in tropical fruit growing seems to be the latest fad. Atwood, of the Preferred, and Keelor, of the Empire, both have places in Florida (where the laws are worse than Cuba) on which they are fadding grape fruit and asparagus, respectfully.

Henry Evans, president of the Continental and the Fidelity-Phenix, has been elected an honorary member of the Western Union.

TOO MUCH PROMOTION.

What is to be the outcome of the present troubles of the Consolidated Casualty nobody seems able to predict. The opinion is held by some that the capital will be reduced enough to give the company a fair surplus; that it will be reorganized and then do business in a modest way. Others appear to think that it will have to be wound up.

That the company is in trouble surprises nobody who has been familiar with its brief but spectacular career. It was in trouble before it was born, and it never has seen a really healthy day. It was a case of too much Van Laningham, too much Armstrong, too much "Everybody's Corporation," too much four-flushing, and a few other things.

When the company started, under a cloud, last year there were but few casualty men who believe it was destined to be a success. The fact that more than half the receipts from stock sales had gone to promotion expense was in itself a terrific handicap, but the publication of this fact and the statement of Insurance Commissioner Darst of West Virginia that he would not license the company in its home State but for the law's compelling him to do so, was an added one. Van Laningham had "milked" the company to a fare-ye-well before it ever issued a policy.

A little concern, with only a few thousand dollars of surplus, it started off on an expensive scale entirely out of keeping with its size and prospects. It got licenses only in four States—West Virginia, Kentucky, Arkansas and Kansas. While ostensibly an Illinois company it could not do business in Illinois. The States in which it was licensed do not produce much casualty business at the best, so it was a fair conclusion that it was not getting a very large premium income. Figures at the end of the year showed it had done about \$14,000 in premiums. Before the end of 1909 it was a safe assumption that its original surplus of about \$14,000 must be wiped out unless the company was getting in considerable surplus by sale of stock. This sale of new stock was evidently what enabled it to make a statement January 1. From the time it was licensed to the end of the year it increased its paid capital from \$145,000 to about \$314,000, which naturally brought considerable to the surplus account. Now it is supposed to be impaired to the extent of about \$75,000.

West Virginia Takes Charge.

Following an examination to verify its annual statement, the West Virginia department took possession of

the company by authority of the directors. The examination in Chicago was not satisfactory. The examiners found difficulty in tracing the disbursements. It is stated that when they went to President Armstrong about these questions, he shifted responsibility to Secretary Mitchell, and he in turn to somebody else. Commissioner Darst decided to take all books and records to Charleston, the legal home office of the company, and endeavor there to unravel the snarl.

The examiners found a most surprising disregard of the value of money in the company. A few months ago the company left its spacious quarters in the Majestic building and bought an old residence for a home office. There a uniformed doorkeeper was installed. There were pages to carry messages and a chef to furnish luncheon to the office force. Inquiry showed that only 65,000 out of 500,000 envelopes ordered had been delivered. Mr. Armstrong had decided to have on the home office a large electric sign, with the famous red heart in colored lights. One design at \$1,500 had been submitted and disapproved. Then another, to cost \$4,000, had been submitted, and this one was ordered, but has not been delivered.

A Short but Merry Life.

One of the directors is quoted as saying that there were no large salaries except that of President Armstrong, which was \$12,000 a year. That was "going some" for a company of such dimensions. The directors are inclined to blame Mr. Armstrong for the trouble, saying that they left everything to the officers—something they had no business to do. Mr. Armstrong blames the situation on a conspiracy of competitors to put the company out of business before it got well started. Such talk is foolish. Competitors had "knocked" the company from the time it started, as they had no confidence in it and believed its methods and presence were a menace to the legitimate casualty business, but the likelihood of any conspiracy is extremely remote.

Conceived in Ignorance.

Aside from its bad start, from its failure to do much business, from want of confidence in Mr. Armstrong as an executive of a casualty company, the Consolidated has been under suspicion among casualty men. It will be remembered that when the West Virginia department examined it previous to giving it its original license it found it impaired about \$16,000. This was changed into a surplus of \$14,000 by the sale of \$90,000 of some bonds which the department had valued at \$60,000. This \$90,000 was

said to be represented by a certificate of deposit in an Iowa bank, and this caused considerable speculation of an unfavorable character. Stories also gained circulation about another certificate of deposit in a bank in a Southern State which did not bear a high local reputation. In the company's annual statement certificates of deposit made up an unusually large part of its total assets. Real estate also figured more prominently than is generally considered desirable. It is stated that one Western man capitalized his manufacturing business and turned in all the stock for stock of the Consolidated Casualty.

Officers Not Stockholders.

Vice-President C. H. Burras and Mitchell D. Follansbee, a member of the executive committee, both well-known Chicago lawyers, were found by the examiners not to be stockholders.

Exploitation of "Everybody's Corporation" added nothing to the company's reputation. Men who had been charitable towards the Consolidated, lost all confidence in it and in President Armstrong when he commenced to make a bid for \$10 stock subscriptions through the columns of women's magazines for this corporation which was going to buy up insur-

ance companies and run them for the benefit of everybody—who had stock in Everybody's Corporation.

The Audit Company Is Rapped.

The Audit Company of New York, which issued a favorable report after auditing the company's annual statement is coming in for considerable criticism. Of late the casualty company has had as many as fifteen stock salesmen at work and they have used this report of the audit company effectively. Any future reports it may make on insurance companies will be read by insurance people with this one in mind.

With the company in such a bad mess and Mr. Armstrong out of control, it is easy to turn on him. But his mistakes alone should not be considered, and all reference to extenuating circumstances omitted. Others made a mistake when they gave him prominence in the casualty world by electing him president of the Casualty Company of America, with no knowledge of the casualty business and an experience made up chiefly of newspaper work and a few years as a public official.

Dreams.

There is no doubt that in the summer of 1908 he fully expected that he could get a large company organized within a short time and take over into it the Philadelphia Casualty, of which he was then president, and on a control in whose stock he stated he had an option. He was unwise in indulging in such expectations, but it is altogether likely Van Laningham impressed him beyond reason with his ability to do things. When he found himself out of the Philadelphia Casualty altogether he had to have a company if he was to carry out his plans and Van was able to drive a bargain which was liberal to him but not to the company. Throughout all the troubles which have beset the Consolidated, he has taken the drubbing of himself and his company in a way worthy of admiration. When the newspapers by printing the facts were making his way hard, he asked no quarter. He was a newspaper man himself and he knew it was the business of newspapers to publish the news. He has been too optimistic. He has indulged in over-confidence in his own ability to make a success of a business in which he had never received an elementary training.

Uncle Sam Interested.

In the meantime the Federal authorities in Chicago are investigating to see whether the mails have been used to defraud in the literature sent out

promising impossible profits for a new company. "Everybody's Corporation," the subsidiary concern recently organized by Armstrong and Mitchell, is also under investigation. One feature of the situation that is specially interesting is the position in which it places the Kansas Bankers Association, which made a contract with the Consolidated Casualty Company for the handling of the insurance of its members. This deal was used by the stock salesmen of the company to unload a lot of stock upon the Kansas bankers. The association was warned at the time that the company was not licensed to do business in Illinois, that its organizers had been extravagant and that its finances were probably seriously involved, but it, too, bit on the story that all this was due to the jealousy of the "big Eastern companies."

Buncombe.

The "suspended" president of the company, Robert B. Armstrong, is out with a statement in which he endeavors to gloss over and begot a situation that has been perfectly apparent to all observers since the publication of that section of the concern's by-laws was first made by "The Chronicle" a year or more ago, which provides that the "first president of the company must be a man who has been president of at least two casualty companies during the three years preceding," or to that effect. This covered Armstrong's presidency of the Casualty Company of America and the Philadelphia Casualty. Plainly the by-law was made to refer to him because he was probably the only man in the whole world thumb-marked and bertillonized to its identification.

This is his story:

Armstrong's Statement.

In the statements regarding the affairs of the Consolidated Casualty Company some errors have been made. In the first place the Insurance Department of West Virginia

is in charge of the company. Both Mr. Darst and Mr. Scherr have said they are co-operating to enable the company to continue in the insurance business. They should be given credit for sincerity. All the directors and all the officers have been co-operating with them.

As soon as criticisms of the statement of the company were made, the directors were called together and at my suggestion a committee of which Mr. McChord was elected chairman was placed in full control of the affairs of the company, with full powers and instructions to act with the Insurance Department.

Indications of a conspiracy on the part of competitors and others to

RICHARD D. HARVEY, Assistant General Manager.

IT'S PRESIDENT KELSEY NOW.

The directors of the Aetna Indemnity Company on Tuesday elected Otto Kelsey, former Superintendent of Insurance of the State of New York, president of the company, in place of Beekman Hunt, resigned. The increased capital stock of the company, amounting to \$100,000, was paid in cash. Daniel N. Gage, assistant secretary, in charge of the surety department of the company, was elected vice-president, in place of Samuel B. Brewster, resigned. Vice-President and former Secretary Charles I. Brooks remains with the company. William C. Lomax was elected secretary. It is thought that no other changes are contemplated.

These changes were brought about by the purchase of a large amount of stock by outside parties not heretofore connected with the company, who closed their negotiations with the owners of the stock of the company before the Commercial Union, of London, which has also been negotiating for the stock, closed its proposed transaction. It is understood that the option which the Commercial Union had was at \$50 per share, or 200 per cent. of the par value of the stock. The price paid by the new purchasers of the company is not known. Mr. Kelsey, who has been elected president, represents the interests that have assumed control.

DARE A. MACBETH.

The National Surety Company received a telegram to-day from the City of Mexico announcing the sudden death in that city yesterday of Dare A. Macbeth, assistant general solicitor of the company. The officers of the National Surety Company had not been aware that Mr. Macbeth was ill and the news of his death came to them as an inexpressible shock. They had been in close association with Mr. Macbeth in the service of the company for a number of years and held him in close affection for his many lovable personal qualities, as well as in high esteem for his varied abilities.

During his entire business and professional career Mr. Macbeth has been identified with the surety business. Commencing as a special agent of the American Surety Company at Indianapolis he passed into the service of the Fidelity and Deposit Company where the high order of his service won for him later the important and responsible position as superintendent of agencies and general manager of the American Bonding Company. Still later he became the vice-president and general man-

ager of the Bankers Surety Company, which position he surrendered to become identified with the National Surety Company, in whose service he remained as assistant general solicitor for a period of five years, with the exception of a brief interval, when he acted as general solicitor of the Metropolitan Surety Company.

ARMSTRONG'S STATEMENT.

(Continued from Page 9.)

put the Consolidated Casualty Company out of business before it had a fair start are multiplying. Such investigation as we have been able to make has disclosed some conclusive evidence of such a conspiracy. Whether we will be able to secure such proof as will justify further proceedings depends upon further investigation.

As the insurance officials have said, the Consolidated Casualty Company has a great opportunity. If it is given a fair chance there is no reason why it should not resume its operations and become a successful company. There certainly is no lack of co-operation on the part of any officer or director to bring about this desired result.

In regard to the statement that the Federal authorities have received a complaint regarding the Consolidated Casualty Company, I was informed about a year ago that complaint inspired by some of our competitors had been filed. I had no further information concerning the same until the public announcement this morning. As the matter has been pigeon-holed all this time, it evidently was not worthy of attention. Anyone may file a complaint against anyone else. Until the Insurance Department has completed its examination and has made its report, I desire to make no further statement.

THE PITY OF IT.

Twelve lives were sacrificed in the burning of Fish's furniture store in Chicago last Friday. The victims were mostly employes of the office, which was located on the sixth floor front. The only fire escape was on the rear, and was of the old style "ladder" variety. The present city ordinance permits these fire escapes on old buildings unless complaint is made. After the disaster the building inspection department was promptly out with a statement that no complaint had been made of the Fish building. Records of the fire department, however, show that its inspector did complain of the building to Chief Horan, and he claims to have transmitted the complaint to the building department.

The Iroquois Theatre fire in Chicago in 1903 awakened the whole West to the theatre hazard. The Collinwood school fire, near Cleveland, O., caused great activity in better protecting schools against fire. It is likely

that this disaster will have a similar effect and result in drawing tighter the restrictions on mercantile establishments. The pity is that municipalities require such a price for being spurred into doing their duty.

Manager Frank Lock, of the Atlas Assurance Company of London, sailed for England last week with his family for a two months' rest.

The Hepworth-Kirby agency at Duluth has unionized, taking in the Royal and surrendering a dozen non-union companies.

URGE RETENTION OF PARKER.

All the members of the Boston Board of Fire Underwriters, save one, have signed a petition asking Mayor Fitzgerald to reappoint Fire Commissioner Parker, said petition reading as follows:

We, the undersigned, having large financial interests at stake in the good management of the Boston Fire Department and believing that Colonel Samuel Parker as fire commissioner has proved himself an able officer and that under him the fire department has become a well organized, well disciplined and most efficient force, beg of you to reappoint Colonel Parker as fire commissioner when his term of office shall expire.

Such men as Colonel Parker has proved himself are hard to get, and in reappointing him we are satisfied you will serve and protect the best interests of the business men and property owners of the city of Boston.

Annual Meeting Boston Protective Department.

Authority to expend a sum not to exceed \$105,000 for the maintenance of the Boston Protective Department during the ensuing year was, upon recommendation of the directors, voted by the members of that corporation at its annual meeting held last Thursday. Augustus S. Lovett was elected president, Horace H. Soule vice-president, and Edward Spaulding was re-elected secretary and treasurer. Edmund Winchester, H. H. Whitney and A. B. Gilmore were elected directors for three years. The directors holding over are W. B. Henderson, George W. Hinckley and S. M. Crain.

Memorial to the Late L. S. Jordan.

The Boston Board of Fire Underwriters at its meeting last Tuesday adopted the following memorial to the late L. Stewart Jordan, as prepared by Charles H. Porter, George A. Eastman and Adam Archibald, the committee appointed for that purpose:

L. Stewart Jordan began in the business of insurance at the office of his father in the Brazer building, No. 27 State street, in 1857. He was in this building until the firm of Dobson & Jordan was formed; the new firm occupying rooms at 46 State street.

In 1867 the firm of Jordan, Eddy & Co. was formed and in 1870 was changed to Jordan, Lovett & Co., and this co-partnership existed until the death of the senior partner, which took place on March 14, 1910.

He was active for many years and there was, with one exception, no one who had been continually in the business for so long a period of time.

Faithful in the performance of his

business, loyal in all ways to this board, his upright career is one which may ever serve as an example worthy of emulation by us all.

By his death a useful man of affairs has gone from our midst.

To his partner we tender our regrets at the closing of so many years of close relations.

To his daughter we send our deepest sympathy in this her hour of bereavement, hoping that in the memory of a loving and devoted father will come relief to her hours of grief, when looking back upon the record which he leaves.

New England Brevities.

Mark R. Buxton, since 1889 special agent for New England of the Granite State Fire, died at his home in Nashua, N. H., Wednesday of last week, aged 73. He was an able, honorable and likeable man.

The Massachusetts legislative insurance committee last Monday reported a bill in the House providing that from time to time directors of a mutual fire insurance company may by vote fix and determine the percentages of dividend or return of premium to be paid on expiring policies, which percentages may in their discretion be different for policies insuring farm, manufacturing or storage risks from those insuring in other classes of risks.

The committee has referred to the next general court the bill asking for incorporation of the Massachusetts Annuity Fund and Insurance Company and has reported leave to withdraw on the anti-compact bill.

William H. Dowling, heretofore assistant treasurer of the Massachusetts Bonding, has been appointed manager for Eastern Massachusetts of the accident and health branch of the Casualty Company of America.

Crain, Jones & Bixby are to be the Boston representatives of the Merchants of New York, when its application for admission to Massachusetts is granted.

TO INFLUENCE CO-OPERATION

A number of fire insurance companies are not subscribers to the various State rating boards, and while getting the benefits of their work are not bearing their share of the expense. Brokers placing large lines in the various States and realizing the importance of the service performed by the State advisory raters are placing their business so far as possible only with companies that are subscribers to the rating bureaus in order to influence more general co-operation.

WORKMEN'S COMPENSATION CASE.

An important decision was given by the House of Lords in *Hodgson vs. Owners of West Stanley Colliery*. By an accident at respondents' colliery the appellant lost her husband and two sons, and the appellant claimed compensation in respect of each on the ground that their wages formed a common fund out of which the household was maintained. The courts below limited the liability of the company to one death.

Their Lordships reversed this decision, and allowed the appeal.

The Lord Chancellor declared that there was not a word in the act to justify the contention that though there were three deaths the applicant could only recover the maximum of one workman's death. He brushed aside the argument that the mother was in the eye of the law wholly dependent upon her deceased husband, but declared that it would be an erroneous view to hold that because the widow was only partially dependent upon the husband's earnings she could not receive the full sum of £300 at his death. He decided that she and her family were dependent upon those who supplied them with the means of subsistence, namely, in the present case her husband and each of her two deceased sons.

Lords Macnaghten, Collins and Shaw of Dunfermline concurred.

O, you Lords!—"Insurance Journal," London, March 15.

AS THE WIND BLOWS.

In connection with the refusal of Commissioner Hartigan, of the Insurance Department of Minnesota, to relicense the United Surety Company, of Baltimore, for 1910, there comes up the old question that has perplexed insurance companies for years: Why such a favorite mark for legislators?

That's a fair question. Why are they? A day or so at the insurance investigation now going on at 165 Broadway by the New York State Department might suggest light on the matter. Not on this particular bill, but in general.

It's what the commissioner calls the "Minnesota Basis" of computing reserves, an ever-present tantalizer in every State, a condition which the Insurance Commissioners Convention has seriously considered and decided should be remedied by uniform action.

It appears that the application of the Minnesota law, as interpreted by the commissioner, in this instance, makes what may properly be called a bookkeeping impairment of capital of the company. This condition is

created by reason of the fact that collateral loans on securities are unauthorized under Minnesota laws. Speaking further on the subject the commissioner says that the real estate is not yielding satisfactory returns and the expense ratio is 73 per cent. of the premiums earned, and that the deposits in trust companies and banks are too large.

This is a fair illustration of the power of life and death held by a State insurance department over a company and, entirely aside from this quoted instance, what this power is pregnant with under a vicious influence. It is unnecessary to cite the past and its incidents, at the memory of which comes a thrill of disgust, contempt and pity.

Speaking on this subject a prominent insurance man says:

"Mr. Hartigan has stood consistently for uniform laws. He is sworn to enforce the laws whether he concurs in their wisdom or not. The interpretation and application rests only with him.

"This serves as an illustration of the way in which the values of company stocks may be juggled and tampered with. Under uniform laws or Federal supervision of insurance this could not occur. One or the other of these is essential for the proper protection of the people."

A SPEAKING CAMPAIGN.

Pending action by the Illinois Supreme Court, State Fire Marshal Doyle, of Illinois, is conducting what the politicians call a "speaking campaign." A Supreme Court decision on another case some weeks ago cast doubt upon the validity of the laws creating several State offices and commissions, including that of fire marshal. It is hoped that the court will grant a rehearing soon and so amend its decision that the doubt will be removed from these other offices. Meanwhile the fire marshal is taking advantage of opportunities to address bodies of citizens on the subject of fire waste and the need of its reduction. He is a good speaker and presents a striking array of facts.

An important liability decision has been rendered by the Supreme Court of Michigan, where the administrator of an estate was held legally responsible for the safe condition of buildings. It was held to be his duty to keep buildings in a safe condition so that travelers along the street would not be injured and he was held individually liable for damages when a woman walking along the street was hurt by glass falling from the third-story window of a building owned by the estate.

RESIGNED.

S. M. Powell, Mississippi manager of the Des Moines Life, has resigned.

E. O. Burgan has resigned as manager of the Security Casualty Company of Indiana.

Frank E. Smith has resigned as Oregon manager of the American Surety Company.

R. R. Denny, of Seattle, has resigned as manager for Western Washington of the Travelers.

William R. Lattimer has been appointed State agent of the New York Underwriters' Agency for Alabama. Mr. Lattimer will assume control in that State on April 15.

UNEMPLOYED INSURANCE IN SWITZERLAND.

We are informed that by a law dated November 6, 1909, which came into force on December 12 last, the Cantonal government of Geneva is authorized, for a period of ten years, to grant subsidies to the amount of 60 per cent. of the sums paid to their members by unemployment insurance funds which are attached to trade unions, and which fulfill certain conditions as to registration. Such grants are not to accrue for more than sixty days in the year in respect to any one member, and are to be paid only with regard to members who have been domiciled in Geneva for twelve months, or have been members of a Swiss trade union for a similar period. The State grant will not be paid in respect of unemployment caused by strikes, sickness, accidents, or physical incapacity.—"Insurance Spectator," London, March 15.

GENERAL LIABILITY.

An important decision was recently handed down by the Appellate Division of the New York Supreme Court in a case involving a question of general or public liability. A mother accompanied by two young children while walking the street was frightened and slightly injured by the explosion of a pot of molten lead. In the lower court the woman was awarded \$2,000 damages. The higher court held that the award was excessive in accordance with the actual physical injuries or incapacities due entirely to the fright.

One bond only is required from fire insurance companies in Texas, according to the Supreme Court. The additional bond of \$10,000 called for by the commissioner is not necessary, the court holding that the bond named in section 1 and covering a liability from \$10,000 to \$50,000, according to the business of the company, answered all purposes.

The St. Louis fire insurance situation is still seriously demoralized, with no indications of improvement. The agents say that conditions could be corrected if the companies would take a firm stand against further slashing of advisory rates, while the companies retort that the fault rests with the agents.

Henry G. Morse, president and treasurer of the Fitchburg Mutual Fire Insurance Company, died on Monday.

IRON SAFE CLAUSE.

Insured, a mercantile firm, who kept invoices showing all purchases, but kept no record of daily sales, except credit sales, deposited in a bank all moneys collected from accounts and cash sales, but their bank book did not discriminate between deposits made by the firm and those made by one of them in his individual capacity.

Held, that such book was not a substantial compliance with an iron safe clause requiring the insured to keep a set of books which shall clearly present a complete record of sales for cash or credit.—Houff & Holler v. German American, 66 S. E. (Va.) 831.

Superintendent Hotchkiss, of the New York State Insurance Department, announced on Monday that he had appointed George E. Merigold third deputy superintendent. Mr. Merigold is a graduate of the Buffalo Law School and for the past four years has been secretary to Supreme Court Justice Laughlin.

The Illinois Surety Company has furnished a bond for \$1,000,000 to John W. Hudson, cashier of the Denver National Bank, as executor of the will of the late Amelia Eddy Smith, this being the largest probate bond ever given in Denver.

SEWARD ON UNCONSTITUTIONALITY.

President George F. Seward, of the Fidelity and Casualty, who is chairman of the legislation committee of the Board of Casualty and Surety Underwriters, and the leading insurance authority on that subject in America, and whose testimony before Insurance Superintendent Hotchkiss' investigation of legislative graft in New York State is of special interest at the moment, pays his respects to the bill now in the Ohio Senate, which is regarded as what has here come to be termed a "strike" bill. In other words, the use of the great power vested in the people's so-called chosen representatives in the legislature to extort money and favors which would otherwise be rejected with scorn.

President Seward, in view of the attempted "hold ups" testified to by him before the Superintendent, displays a remarkable degree of poise and self-restraint in his memorandum on this proposed Ohio law with which he has favored "The Chronicle." In it he says:

"This bill proposes to add to the General Code five new sections which are, in substance, as follows:

Section 9583-1. When a loss covered by a policy issued in the State occurs, the insured may give written notice to the insurance company in the same manner that a summons may be served.

"Section 9583-2. Thereupon the insurance company shall adjust and settle the loss, or attempt to do so. If it fails to do this, such failure shall be a waiver of all conditions precedent or limitations in the policy. If the parties shall not agree upon such loss, and either party desires the amount thereof to be determined by appraisal or arbitration, such party shall notify the other party in writing thereof. On failure to make demand for appraisal or arbitration, or failure to proceed therewith after demand has been made, the right to appraisal and arbitration shall be deemed waived, and shall constitute no bar to an action.

"Section 9583-3. If the insurance company denies liability on the ground that it is not covered by the policy, or that the policy is void for any reason, this shall be deemed a waiver of any of the conditions precedent to the bringing of an action.

"Section 9583-4. If the parties fail to agree upon the loss or upon appraisers or arbitrators, the party demanding appraisement may apply to the court on three days' notice for the appointment of appraisers or arbitrators. This notice may be served as an ordinary summons. At the end of three days the court shall hear and determine the petition and appoint three appraisers or arbitrators, who shall make such appraisement and ascertain the amount of loss.

"Section 9583-5. The court shall confirm the report, and if anything is 'found due' by the said appraisers or arbitrators, it shall render judgment

for such amount. Within three days after filing the finding of the appraisers or arbitrators, either party may petition to set aside the finding on the ground of fraud, undue influence or mistake, the facts to be set forth in the petition, and to be deemed denied without answer. The court shall try the question thus presented under the rules governing equitable actions, and either affirm the report or set it aside and appoint new appraisers or arbitrators."

It is difficult to conceive of any plausible argument that can be made in favor of this bill. Almost every provision violates some constitutional right of the parties to the contract. The Constitution of the United States and of the State of Ohio, and of the laws of the State of Ohio, guarantee to persons issuing policies of insurance and persons taking policies of insurance in that State, the right to make contracts of insurance and to embody in the contract such provisions, limitations and conditions as they may choose to agree upon (except, of course, such as are expressly prohibited), and that no law shall be passed which impairs the obligation of a contract. All contracts of insurance must be made, and are made, in conformity with the statutes. This bill in effect provides that even though the parties have, in the exercise of their constitutional and legal rights, made a definite contract for a valid and valuable consideration, terms of the contract shall be changed and provisions shall be deemed waived without any act or fault on the part of the party affected, but merely because that party chooses to stand upon its lawful rights.

Thus a policy of insurance usually requires that notice of a loss be given of it at its head office. This bill would permit notice to be given to any one upon whom the summons could be served. A summons can be served on any agent of the State. This is a very serious modification of the contract. Many agents are located in out-of-the-way villages and places, and transact but very little business. Any failure on the part of such person to forward the notice to the company or any accidental loss of the paper would bring upon the company all the penalties named in the statute.

The bill also provides that if the assured fails to adjust and settle the loss or attempt to do so, no matter what its reasons may be, all conditions precedent and limitations in the policy shall be deemed waived. If the company believes that there has been no loss or that the insurance has been forfeited, or for any reason believes that there is no liability, and therefore refuses to settle or attempt to settle, all conditions and limitations are waived. This is a plain impairment of the contract. Again, if the company denies liability on the ground that the loss is not covered by the policy, or that the policy is void, no matter what the reasons are, it shall be deemed to have waived all conditions precedent to the bringing of an action. This again is a plain impairment of the contract. These provisions plainly and unquestionably would impair the obligation of the contract; therefore, they violate the constitutional rights of the parties.

The bill also violates the constitu-

tional rights of the parties to trial by jury. It provides that either party may demand an appraisal or arbitration, and in case of failure to agree on appraisers or arbitrators, on three days' notice the court shall thereupon appoint appraisers or arbitrators, who shall make an appraisement and ascertain the amount of the loss. The report of the appraisers or arbitrators shall be affirmed and judgment rendered for the amount they have found due. This decision of the arbitrators is not limited merely to the amount of the loss, but includes a determination of the amount which is owing under the policy to the policyholder. There is no provision whatever for reviewing the decision of the arbitrators, and the court would have no right to set it aside, excepting upon the ground of fraud, undue influence or mistake.

The Constitution of the United States and of the State of Ohio guarantees to the parties to such a contract the right to resort to the courts and the right of trial by jury. This bill would completely destroy that right. Aside from the constitutional question, such a law as this would be subversive of the fundamental principles of common justice. It is doubtless designed to give to the policyholder some rights or opportunities as against the insurance company, which he does not now possess, but in fact, it is just as much a violation of the policyholder's rights as of the company's. The right of the policyholder to have his case tried in a regularly constituted court of justice and to have the facts passed upon by a jury

of his peers is, of course, one of great value to him. To take that right from him is to take from him one of the most precious privileges of a citizen of the Commonwealth. We submit that the bill is unjustifiable and uncalled for from any point of view. Its passage would be an outrage upon the rights of all parties to insurance contracts. It would be wholly ineffectual, because each of its provisions would be unconstitutional and void.

Mr. Seward has long been prominent in his pronounced attitude toward putting on the statute books laws that are unenforceable and predestined to become eunuchal, and thereby to weaken the whole legal structure—by reason of creating disrespect for it.

His recent report to the Board of Casualty and Surety Underwriters, as chairman of its legislative committee, in which he details by States the hundreds of bills directed against casualty and surety companies, is replete with interest. It shows plainly how widely the graft microbe has spread throughout this land of the free and the home of the brave. It also indicates approximately how many other than New York State Senators Mr. Seward has pointedly and emphatically invited to "go to hell," as he did the Honorable Big Tim Sullivan of the Bowery.

AN EPITAPH.

(Found by Macaulay's New Zealander in a Chenango County churchyard.)

Oh, stranger, drop the tear that scalds
The cheek at thought of Jotham
Allds!

Benn Conger's shaft was aimed too
true;

He now has passed from public view.
He'd resignation in his mind,
But to his fate was not resigned.

He turned the legislative mills
And made some laws, but made more
bills.

His statesmanship had known no
check

And yet a draft blew him to wreck.
No more upon his charger black
We'll see him "strike" in fierce attack.
To raise the wind he merely meant,
But e'er the storm he bred was spent
He knew no more of pain or joy,
Slain by the bribe of Hiram Moe.—
"New York Tribune."

ADMISSION OF EVIDENCE.

Where, in an action on a fire policy, there was no proof of a custom by the company's adjuster to notify insured before examining the property after the fire, and the policy did not require such notice, it was error to admit evidence that the adjuster did not notify plaintiff's attorney before investigating the loss.—Hartford Fire v. Becton, 124 S. W. (Tex.) 474.

INJURY INTENTIONALLY INFLICTED.

In an action on an accident policy, stipulating for a minimum liability on insured losing his life from fighting or from injury intentionally inflicted on him by another, evidence held to show that insured was intentionally killed by another while engaged in fighting, precluding a recovery for any greater sum than the minimum liability.—Continental Casualty Co. vs. Fleming, 124 S. W. (Ky.) 331.

It is rumored that E. C. Cooper, for three years private secretary of Governor Gillette, of California, is selected to succeed E. Myron Wolf, the present insurance commissioner, who retires on April 1.

AS THE LAW WILL WORK.

Last week "The Chronicle" announced that the New York State Commission appointed to inquire into the matter of employers liability, proper compensation for injuries, prevention of industrial accidents, etc., would submit its report in two or three weeks. This was confirmed on Monday by the filing of the report, together with two bills which it recommends for passage. The report recommends a fundamental change in the liability laws. It also recommends that expert actuarial aid be engaged in formulating statistical bases, according to the method pursued by foreign nations.

Negligence Nullified.

The first bill applies only to certain specified employments. This bill recommends the principle of compensation for all accidents regardless of negligence by providing for compensation for all workmen injured in such employments by either the negligence of the employers, his agents, or by the "necessary risk or danger of the employment or one inherent in the danger thereof." The employments specified are as follows:

The erection or demolition of bridges or buildings; the operation of elevators, derricks, or hoisting apparatus; work on scaffolds; the construction of tunnels or subways; all work carried on under compressed air; construction, or repair of wires, or apparatus charged with electric currents; all work necessitating dangerous proximity to blasting powder or other explosives; the operation of locomotives, motors or cars, or the construction or repair of steam railroad tracks and road beds.

Schedule of Compensation.

The schedule of compensation provided is, in case of death, four years' wages, not to exceed three thousand dollars; and in case of total or partial disability 50 per cent. of the last earnings of the injured person payable weekly, but not more than \$10 per week, during the continuance of the disability, not to exceed a period of eight years.

The compensation provided in case of death is payable only in case the decedent leaves a widow, parents or children. This bill does not take away rights of action, now existing, but provides that the person suing must elect at the time of bringing his action whether he will pursue his rights under the compensation act or under the existing liability laws, and such election is final.

A Serious Defect.

The obvious objection to this compulsory provision of the measure is

that the usual stress and often dire need of the injured is not considered and leaves him just where he now is, i. e., a prey for the ambulance chaser on one side and for the unscrupulous and tight-fisted employer on the other. In either event the poor fellow must yield to the necessities of his family and the emergency.

The Employers' Risk Increased.

The second bill recommended covers all accidents to employees not coming within the purview of the first bill. It introduces the principle of compensation for all accidents, but makes this principle voluntary and subject to agreement between the employer and the employee. This bill, in addition to its elective scheme of compensation, amends the employers' liability act so as to considerably increase the liability of the employer by abrogating or at least greatly modifying the assumption of risk rule. It affects the defense of contributory negligence by placing upon the employer the burden of proving contributory negligence on the part of the employee, whereas, the law requires the employee to prove his freedom from contributory negligence; it modifies the fellow servant rule through which the employers now escape liability for the negligence of co-employees, by declaring employers' liability for negligence of any employee "entrusted with any superintendence" or by reason of the negligence of any employee "entrusted with authority to direct, control or command any employee in the performance of the duty of such employee."

The Compensation Plan.

This bill, after having thus increased the liability of the employer, introduces its compensation plan, which is similar to the one described in the first bill, by declaring that "when and if any employer in this State and any of his employees shall consent to the compensation plan" therein described by filing such consent with the county clerk, then in case injury thereafter results to such employee, compensation shall be paid regardless of the employer's negligence according to a schedule of compensation similar to that in the first bill.

Now for Prevention.

The commission now intends to take up the causes of accidents incident to employment and their prevention.

It is thought that in general these bills will be favored by the casualty and liability insurance companies for two reasons, first, that a more determinate computation of liability can be arrived at, and, second, because it is probable that the new law will serve largely to make uniform or to standardize the coming legislation in the various States of the Union.

and satisfactory results
for its policyholders.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest
of the policyholder by the adoption of
the following liberal features in its new
policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy
year.

Thirty-one days of grace in payment
of all premiums after the first year.

Paid-up insurance or cash surrender
value or extended insurance after two
years' premiums have been paid.

Loans for the full cash surrender
value.

Policy payable in one sum or in instal-
ments for terms of years.

Policy has no restrictions upon resi-
dence or travel and is incontestable after
the first policy year, except for non-pay-
ment of premiums.

Right of the Insured to change the
beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make
this new policy the very perfection in a
life insurance contract.

Assembly Spikes Hotchkiss' Guns.

Superintendent Hotchkiss has repeatedly announced that while he was investigating insurance companies, his main purpose was to expose grafting legislators, their methods of operation, the go-betweens who sold their wares, and such of the legal fraternity who have rendered such services to insurance interests (in Buckley's own words), as "would not be taken up by any reputable lawyer."

The names of a few men more or less prominent in State politics and the names of two well known lobbyists so far have been mentioned. But even if the list of those receiving "presents" is increased it is a question whether or not the superintendent will be able to cause the two law-making bodies of this State to clean house, and if this is not done all his efforts to stop blackmailing and bribing will be lost.

Up to the present time, the odds are against Mr. Hotchkiss accomplishing his purpose. The yellow press has done its best to divert public attention from the real issue at stake by printing scareheads and column after column attacking the insurance companies, one even carrying its buncombe far enough to have a resolution introduced in the Assembly last week calling for the immediate prosecution of the "Firebug Trust" by the Attorney General.

Taking its cue from the above, in an endeavor to head off an investigation of the Assembly itself, on Thursday last, the Ways and Means Committee decided to report favorably the resolution introduced on January 17 by Assemblyman McInerney (Rep.), of Rochester, calling for an investigation of all insurance companies, except life companies.

Switching Public Attention.

The resolution provides for a joint committee of three Senators and five

Assemblymen to conduct the investigation and the committee is to report to the next Legislature. It has power to sit during the summer and fall months, and receives an appropriation of \$25,000 for expenses.

The political significance of the resolution and the reporting of it at this time can be readily seen by the following interview by its author:

"The purpose of my resolution is to reach the difficulty existing between the policyholders and the insurance companies. Grave abuses have arisen in almost every community. There is a board of fire underwriters of fire insurance exchanges, making absolutely arbitrary rules in favor of the companies and against the insured.

"District Attorneys in various counties of the State have had inquiries before the Grand Jury, but the members of the boards have claimed their constitutional privilege, and it has been impossible to obtain information upon which to base indictments or to cure the evils in the fire insurance business. This committee will have the same powers as were had by the Armstrong life insurance committee. While Mr. Hotchkiss can merely scratch the surface and then merely make his recommendations to the legislature, this resolution provides a fund and the manner of bringing witnesses before the committee."

New Dress for Anti-Compact Bill.

On Monday Assemblyman A. J. Levy, of New York, introduced a bill to create a commission to investigate the State Board of Fire Underwriters. The commission is to be composed of three senators, three assemblymen, and one person appointed by the governor, and is charged with ascertaining if the fire underwriters divide territory among themselves and apportion insurance rates for each

company; what the qualifications of membership are, and if rebating is practiced.

The commission is also required to get the names of all officers and agents of companies organized under laws of the State and to report to the legislature next March. No salary is to be paid the commissioners, but \$50,000 is appropriated for expenses.

"If the State desires to censor fire insurance rates," said an official of the New York Exchange, "or to dictate what the citizens should pay, I presume that the companies can survive. If it proposes to dictate what the citizens should pay the companies, it should also take upon itself the responsibility for compelling property owners to prevent fires which originate through carelessness, ignorance, negligence and crime. If it does this, the government will be a little less popular in the irresponsible mind than the fire insurance rating association is at the present time. Possibly this will make the fire underwriter's path easier.

"At present on the solvency and ability to pay of the fire insurance companies rest the stability and prosperity of every phase of business life. It is not at any time an easy business or a profitable business from an underwriting standpoint. In the time of a crisis like the San Francisco fire, the stockholders dug into their pockets readily for funds to make good impairments. How readily will they do this if the government treats the business as an Ishmaelite?"

Thursday.

As mentioned in the last issue of "The Chronicle," the morning session of Superintendent Hotchkiss' inquiry as to who got the money which was paid out by insurance companies in the past nine years in connection

with legislation in this State, Vice-President Lunger, of the Travelers Insurance Company, of Hartford, at Thursday morning's session, rather grudgingly admitted that his company had paid \$21,450 in 1903 to Buckley for four months' legal services.

Mr. Lunger justified his approving of such a large bill to an inexperienced solicitor by the statement that Buckley had come highly recommended by a most prominent insurance official. In fact, he later admitted that Buckley was so well known around the offices of the New York Life Insurance Company shortly after his retirement from the Insurance Department that it was common to refer to him as "Willie."

The only other witness at the morning session was Edwin E. Clapp, who identified Edward A. Brown, of Middletown, N. Y., as the go-between who offered to enlist the services of "Big Tim" Sullivan for \$10,000 in smothering a bill in 1892, as testified to previously by President George F. Seward, of the Fidelity and Casualty Company.

An Extra Constitutional Government.

At the afternoon session E. R. Kennedy, of the firm of Weed & Kennedy, was able to account for the most of the \$8,311 he received from the Board of Fire Underwriters on account of legislative expenses in 1901. Besides the present of \$1,000 to George W. Aldrich, of Rochester, he recalled giving \$2,500 to Commodore P. Vedder and \$800 to Emmet Rhodes. This leaves, together with his previous testimony, a balance of only \$700 unaccounted for.

Mr. Kennedy was asked if he had ever had any experience where it was suggested that money would help legislation, and told of being approached on a car when going to Albany, but did not know the man who made the suggestion. Mr. Kennedy described the system of political graft in both parties which he called an extra constitutional government, and said that during the last two Democratic legislatures it was only necessary to go to an office in 111 Broadway to get a bill through the legislature or have one defeated.

Brown Defends McCall.

Stewart Brown, a broker of 170 Broadway, and formerly an employe of the New York Life, was next called, and offered a letter in evidence contradicting statements that had been made concerning the connection of Justice E. E. McCall with Buckley's loans from the Phenix Insurance Company, checks for which the

Justice had deposited in his own account. Mr. Brown stated:

When Mr. Buckley's loan in the Phenix was called in January, 1901, he applied to Mr. McCall to assist him, which the latter did by giving him his personal check on January 14, 1901, to take up said loan; if Mr. Buckley took up his loan in December, 1900, as has been publicly suggested, to deceive the Insurance Department, it was not Mr. McCall's check that paid it; if taken up in December, no matter by whom, there was no intent to deceive the Insurance Department, as there was no necessity for so doing, the loan was legally made, on securities authorized by law to be lent upon, the margin was satisfactory, and the borrower was not prohibited by law from making or obtaining such loan. If the Phenix, for purposes of their own, did not want collateral loans to appear in their annual statements they followed the practice of other companies, but the purpose was not to deceive the Insurance Department.

Brown's letter also fully explained the connection of Justice McCall's name with the Munich Reinsurance Company, as follows:

Mr. Justice McCall, in 1900, and prior thereto, then a practicing lawyer, was real estate counsel of the New York Life, and at my earnest solicitation agreed to act as general counsel of the Munich Reinsurance Company, and I introduced Mr. Schriener, foreign manager of the Munich Company, to him, and even suggested the amount of annual retainer; subsequently, at my solicitation, he agreed to act as general counsel of the International Banking and Trust Company, and in none of his relations with the above three companies did he have anything to do with legislative matters directly or indirectly during the sixteen years that I have known him.

Had to "See" Hamilton.

Henry C. Willcox, vice-president and general solicitor of the American Surety Company, proved one of the frankest and most interesting witnesses yet heard.

In reference to his company's dealings with the late Andrew Hamilton and Buckley in 1901, Mr. Willcox said there were four or five measures before the legislature that year in which his company was interested, but chief among these was the unearned premium fund tax measure, and he in company with Mr. Nadal, counsel for the Fidelity and Casualty Company, went to Albany to endeavor to secure an amendment to the legislation proposed by the fire insurance interests, so that the exemption from taxation provided for in the bill then before the legislature be amended so as to include the funds of casualty and surety companies. He stated that he could make no progress in that direction and then sought Andrew Hamilton, whom he

got into communication with through William H. Buckley, then in the Insurance Department. Buckley got Hamilton on the phone and Mr. Willcox talked with him, telling him of the situation and what he wished to have accomplished. Hamilton then said he would speak to Buckley, and after the two had conversed for a few minutes, Buckley came out of the telephone booth and said that Hamilton would take care of the matter. He did, as the amendment was added to the bill and passed.

Mr. Willcox said that when he was in Albany and wanted to find Hamilton in the evening he went to the Insurance Department office and found him and Buckley. Mr. Willcox said that there was no arrangement as to compensation, but that later Hamilton sent in a bill for \$10,000, to which he objected as being too large. He had a conference with Hamilton and some correspondence, which resulted in a compromise, whereby the American Surety Company was to pay part of the bill and try to collect the remainder from the other surety companies who were interested in the measure. Witness said that Hamilton conveyed to him the suggestion that he had to assume obligations or make promises which he could not meet unless the bill was paid. As a result of the compromise Hamilton was paid \$374 by the Lawyers' Surety Company, \$419 by the United States Guarantee Company, and \$5,676 by the American Surety Company, and the promise was made that the balance, \$1,000, would be paid if Mr. Willcox could induce the National Surety Company to assume its share of the bill.

Caught the National, Too.

The witness said that they had been unsuccessful in making the National come across. The amusing feature of it was that, as testified to later by William J. Griffin, vice-president and general solicitor of the National Surety Company, Hamilton had collected direct from the National the sum of \$2,530.17. However, Mr. Griffin stated that he was quite sure Mr. Willcox was not aware that this payment had been made, and as a matter of fact he did not know it himself until two years later, in 1903.

Friday.

At Friday morning's session Superintendent Hotchkiss placed on record a statement of Justice McCall, together with exhibits, which fully confirmed the facts set forth in the statement of Stewart Brown on the day previous, to prove conclusively that the Justice did not receive one

penny for his own use of the loans made by Brown from the Phenix Insurance Company. In accepting the same, Superintendent Hotchkiss stated that it was to be regretted that the facts had not been made clear when Mr. Buckley was being examined, but that he was pleased now to give the same publicity to Justice McCall's explanation as had been given to the testimony of Mr. Buckley.

The balance of the day was taken up with the examination of Stewart Brown, who styled himself at one time as "personal" representative of the late John A. McCall, in which the superintendent attempted to connect men prominent with State politics as profiting through the remarkable charter given the American Bonding and Mortgage Guarantee Company in 1901, which shortly became the International Banking and Trust Company, previously referred to. Brown testified that Andrew Hamilton introduced him to State Senator Louis F. Goodsell, who later introduced the bill. He brought out that Superintendent of Banks Kilburn forced certain amendments to the bill which brought the company under his jurisdiction. After this was overcome, Brown testified, it was plain sailing.

Brown, who proved to be one of the most unsatisfactory witnesses from the department's standpoint, many times caused ripples of laughter to pass over the listeners by his quick repartee and humorous answers. He admitted that the measure was so drawn as to deceive the legislature, in that it permitted the company selling groceries or running a pawn shop, besides the banking purposes for which it was organized.

His only reply when asked if he believed that Gov. Roosevelt would have signed the bill if he knew its real purpose was, "He signed it."

Monday.

On Monday Vice-President Correa, of the Home Insurance Company, was called to the stand and Superintendent Hotchkiss attempted to bring out circumstantial evidence to show that the late George P. Sheldon presented to the New York Board of Fire Underwriters a bill for \$5,000 for fighting the Anti-Compact bill, introduced by Senator T. F. Grady at Albany last year and the same day drew \$1,500 from the Liberty National Bank against the check paid him by the underwriters.

Frederick T. Case a lawyer, son of C. L. Case, one-time head of the underwriters' legislative committee, who went to Albany to look after bills for the Board of Fire Underwriters, followed Mr. Correa. He said his attention was given largely

to the Hamm bill, known as the "proofs of loss" bill. He saw Mr. Buckley in Albany at the suggestion of Mr. Sheldon, who told that Buckley was conversant with matters. Mr. Buckley told him he would see Senators Grattan and Grady.

George Richards, of Richards & Heald, was called, and testified that he had never gone to Albany in Mr. Sheldon's time for the New York Board of Fire Underwriters, and that he had never seen Mr. Buckley in his life. He consented to have the books of Richards & Heald examined.

William E. Hutchings, president of the North River Fire Insurance Company, was then called. Mr. Hutchings' memory was very bad, and although the superintendent had several letters to refresh the same, there was no improvement.

In the afternoon the first witness was Charles H. Young, of the law firm of C. H. & J. A. Young, retained in 1909 by the New York Board of Fire Underwriters to represent it at a conference at the Insurance Department in Albany relative to the liquidation act bill. Mr. Young testified that he had been approached in this connection by Mr. Sheldon and others. To this conference came also Mr. McIntosh of the Life Insurance Presidents' Association, Mr. Tully, Mr. Hotchkiss and several gentlemen from the Insurance Department. Senator Grady, as representative of certain small stockholders in different fire insurance companies, was also present. The bill as modified was passed. Mr. Young appeared before the committee and stated that the bill was satisfactory to the New York Board of Fire Underwriters. He had never had dealings with Senator Grady nor with any other State Senator in regard to the bill. Mr. Young received over \$2,500 retainer, all of which he kept.

Morrell O. Brown, vice-president of the Westchester Insurance Company, was the next witness to take the stand. Mr. Brown, a member of the laws and legislation committee in 1908-9, attended the meeting of January 20, but had forgotten the proceedings of the meeting, nor could he recall having anything to do with the anti-compact bill; had heard of it, however, and so far as he knew his committee was in no way concerned with it. Like Mr. Burchell, he didn't know of Mr. Young, and knew only in a general way of Richards and Heald.

Thomas A. Ralston, sub-manager of the Northern Assurance Company, testified that he had been chairman of the finance committee of the New York Board of Fire Underwriters and

that the Sheldon bill was shown him for approval. He understood that it was for legal expenses, but declined to approve it until it had been brought before the committee. He had called a meeting immediately. The bill was presented and approved on Mr. Sheldon's statement that it was for "legal expenses."

Next to give his testimony was Henry S. Bartow, assistant cashier of the Liberty National Bank. Mr. Bartow said that Mr. Sheldon had a personal account at his bank, which was also the depository for the Phenix Insurance Company. On September 1, 1909, Mr. Sheldon came into the bank after hours with his own check on the Liberty National Bank for \$1,500, dated September 1, 1909, and payable "to bearer." He had deposited to his own account earlier in the day one for \$5,000 on the American Exchange National Bank, signed by the treasurer of the New York Board of Fire Underwriters, and payable to George R. Sheldon, chairman. On the back of the \$1,500 was a pencil memorandum, "3-500," which Mr. Bartow explained was made by himself to show the teller that three \$500 bills were wanted. This form of payment was suggested by Mr. Bartow, as Mr. Sheldon had said he wanted large bills. The bills were brought by a clerk. Mr. Sheldon came alone and wrote the check in the bank. Mr. Bartow had never noticed irregularities in the accounts of Mr. Sheldon or the Phenix.

Trail of Thirteen Legislators.

"I want to show that members of the legislature gambled in stocks, and through their stock dealings trace money paid to them by agents of the fire insurance companies," said Superintendent Hotchkiss, opening up Wednesday's session, which did not begin until three in the afternoon.

James W. Cunningham, formerly of the stock brokerage firm of Ellingwood & Cunningham, which failed in 1904, appeared as the only witness. His memory was very bad, and the superintendent gave him until Monday to refresh it.

However, the books of that firm show that from 1900 to 1904 thirteen Republican Senators and Assemblymen, members of the most important committees in the legislature, gambled in stocks on a very heavy scale through that firm.

The books also show that seven of these men received large sums of money from G. Tracy Rogers, a special partner of that firm and the legislative representative in Albany of the street railway interests of New York State.

UNION CENTRAL VICTORIOUS.

Suit to Restrain Distribution of Stock Dividend Dismissed.

The Circuit Court of Hamilton County has handed down a decision in Cincinnati, dismissing the action of the Attorney General of Ohio, upon the relation of the Superintendent of Insurance, to restrain the Union Central Life Insurance Company from distributing the \$400,000 stock dividend which it had declared out of the profits which the company claimed had been realized from stock or non-participating policies. The charges in the Attorney General's action were that these profits had not been realized and also that the company was estopped from declaring them, in any event, by previous declarations that the surplus belonged to the policyholders.

The first of these charges rested upon a challenge of the correctness of the computations made by the actuary of the company which were by him acknowledged to be approximate, such challenge taking the form of a special investigation by Consulting Actuary S. H. Wolfe on behalf of several insurance departments, which investigation, embracing the issues of a few years only, cast some doubt upon the accuracy of the assumptions by the actuary of the company in making his computations. The method used by the actuary of the company and his general conclusions had both been approved by Consulting Actuary David Parks Fackler prior to the declaration of the dividend.

The fight has been long and bitter, several State insurance supervising officials joining the Superintendent of Insurance of Ohio in disapproval of the action of the company, which action was defended by the company on the grounds that the by-law itself was reasonable, that much more than the amount divided had been earned; that an increase of capital was called for by the requirements of the laws and departments of several States, and that a separation of the earnings of the two departments was also called for by the requirements of the laws and of the departments of other States.

Relevant Portion of Court's Opinion.

The following is the portion of the opinion of the court which bears on the most important issues of the case:

It is admitted the separation only is approximate, but after careful consideration the court has reached the conclusion there were, at any rate, profits on non-participating policies in excess of \$400,000. Beyond any question the surplus from non-participating policies belongs to the company.

This company was not a mutual company. The company had a surplus

of \$2,400,000. It undoubtedly belonged to the company. The company are the stockholders. Not a penny of the surplus belongs to the policyholders. This surplus is not there for the benefit of the policyholders. It was not so intended and could not be so understood. There was no law that compelled the company to create the surplus. The State, not the policyholders, objected. It can never be returned to the policyholders who created it, for most of these contracts have been terminated. The company was not compelled to keep separate funds until the law was passed. No rights of the public have been invaded. Therefore the relief asked for must be denied and the petition dismissed.

The complaint is that the company has misused its franchise or has acted beyond its powers, to speak more accurately, and the only way that the suit can be invoked is in the theory that a wrong has been done to the public. A court cannot, in this action, concern itself with the rights of the policyholders or stockholders, but can only consider wherein some public mischief is done or threatened. If the rights of any policyholder have been invaded it is for him to take such action, but not for the State to do it for him.

We are unable to see how the act of the directors in declaring this stock dividend has invaded any rights of any policyholder and much less inflicted any injury on the public. When the directors declared the stock dividend it took nothing away from the company and added nothing to what it already had. If it had any effect at all it was to increase the stability of the company and add to the security of the policyholders. The only chance affecting the stockholder was that if the company earned the dividend he would receive dividends on his stock.

Looking at it in any light, if we are correct in our conclusion that the evidence shows that there is at the present time \$1,000,000 in the surplus, placed there from the non-participating business, the excess over \$400,000 would pay the dividends for twenty years to come, and there could be no possible injury to the public.

Extraordinary That Issue Should Have Been Raised.

That any such issue should ever have been raised in the case of the Union Central Life Insurance Company has by many close and disinterested observers been deemed most extraordinary. As was shown upon the trial, the net amount received by the company from participating premiums, after deducting annual dividends allowed, has been materially less than the non-participating premiums charged and the net amount received in premiums on so-called "life endowment" policies, that is, policies with deferred dividends, after crediting the actual accumulations of the surplus upon such dividends, which in the Union Central are charged as a liability, was materially less than the net cost of annual dividend policies. Even under these circumstances the company had accumulated a net surplus of

\$2,400,000. Its stock or non-participating business amounted to about one-third of the entire business; and, as stated, upon this business a larger proportionate net premium income, from which this large accumulation of surplus could have been derived, had been received on account of these stock or non-participating policies than on account of either of the other classes.

Investigations, likewise, of the annual earnings on the stock or non-participating business since the declaration of the dividend, had been made from year to year, and it was shown that very large additional profits, exceeding, even in this short period, the sum of \$400,000, had been realized.

Union Central's Big Dividends to Policyholders.

Had an attack of this sort been made upon a company in which the participating policyholders were getting a worse deal than the non-participating, as for instance, in certain companies which have virtually shown no earnings for participating policyholders, although collecting on the average nearly 25 per cent. larger premiums than on non-participating policies, there would apparently have been very good reason indeed for questioning the result of an investigation which showed the stock policies to have earned a large profit, available for the enrichment of stockholders. But in the Union Central Life Insurance Company, which for many years has virtually led all the American companies in results to annual dividend policyholders and deferred dividend policyholders, no such condition could or did exist; and certainly the returns to the stockholders who made the success of the company possible, both by their original investment and by the prudence and care of the management which they have supplied, have not been large and, in view of the fact that it was clearly provided in the by-laws that all the earnings upon non-participating business should be theirs and could be divided at any time among them in dividends, there

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

THE PENN MUTUAL LIFE INSURANCE COMPANY OF PHILADELPHIA

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

certainly appears to be no impropriety in such a dividend being declared, if earned.

Only Justification of Suit, the "Approximation?"

The only question, therefore, was as to whether it had actually been earned; and the only excuse or possible justification for the attack made upon the company, was that to some minds there appeared to remain a doubt as to whether the non-participating policies had earned so large an amount of surplus in view of the confessedly approximate character of the computations made by the actuary, and also in view of a suspicion that the mortality in the non-participating class might have been considerably heavier than in the participating class. The general mortality experience of the company was known to have been exceptionally low. In this connection, Consulting Actuary Fackler called attention to the large profits in the Travelers, where the business was virtually exclusively non-participating; and the observation of Actuary Henry Moir in his book, "The Primer of Life Assurance," that it does not appear to be the fact generally in the United States that mortality among non-participating policyholders markedly exceeds mortality among participating, is also in point. The years of the Union Central's experience which were actually investigated, also showed this.

President Clark of the Union Central and his associates are specially to be congratulated upon the favorable outcome of the long and bitter litigation which has resulted from the action of the board of directors in declaring this stock dividend; and it is to be hoped that the decision of the court will be accepted as final by all parties, and that the entire dispute is at an end.

POLICY LOANS ARE ADVANCES, NOT INVESTMENTS.

The decision of the Board of Assessors of the Parish of New Orleans vs. the New York Life Insurance Company, rendered by the Supreme Court of the United States on January 27 last, holds that policy loans and premium liens are not investments or credits in such a sense as to render the same liable to tax under the laws of Louisiana, which subject credits which are within the State to tax. The policy loans and lien notes of the New York Life Insurance Company are not made personal obligations of the policyholders, but are merely against the respective policies and their values and are of the nature of advancements against the ultimate interests of the policyholders, which,

likewise, the company is required to make by the terms of the policies themselves. The Supreme Court so holds in the following opinion:

Opinion of United States Supreme Court.

The so-called credits arise out of transactions denominated policy loans and premium lien note loans, which are explained at length by the Judge below, but which may be summed up more shortly here. When the plaintiff's policies have run a certain length of time and the premiums have been paid as due, the plaintiff becomes bound ultimately to pay what is called their reserve value, whether the payment of premiums is kept up or not; and this reserve value increases as the payments of premiums go on. A policyholder desiring to keep his policy on foot, and yet to profit by the reserve value that it has acquired, may be allowed, at the plaintiff's discretion, to receive a sum not exceeding that present value, on the terms that, on the settlement of any claim under the policy, the sum so received shall be deducted with interest (the interest representing what it is estimated that the sum would have earned if retained by the plaintiff); and that, on failure to pay any premium or the above-mentioned interest, the sum received shall be deducted from the reserve value at once.

This is called a loan. It is represented by what is called a note, which contains a promise to pay the money. But as the plaintiff never advances more than it already is absolutely bound for under the policy, it has no interest in creating a personal liability, and therefore the contract on the face of the note goes on to provide that if the note is not paid when due, it shall be extinguished automatically by the counter credit for what we have called the reserve value of the policy. In short, the claim of the policyholder on the one side and of the company on the other are brought into an account current by the very act that creates the latter. The so-called liability of the policyholder never exists as a personal liability, it never is a debt, but is merely a deduction in account from the sum that the plaintiffs ultimately must pay. In settling that account, interest will be computed on the item for the reason that we have mentioned; but the item never could be sued for, any more than any other single item of a mutual account that always shows a balance against the would-be plaintiff. In form it subsists as an item until the settlement, because interest must be charged on it. In substance it is extinct from the beginning, because, as was said by the Judge below, it is a payment, not a loan. A collateral illustration of the principle will be found in *Starratt v. Mullen*, 148 Mass. 570, 2 L. R. A. 697, 20 N. E. 178, and cases there cited.

Instead of receiving an advance, the policyholder may draw upon the reserve value for a premium due, again giving a note; but the transaction is similar in legal characteristics to that which we have described. It is unnecessary to set out the documents at length, because, although the same language is not used in all, there is no nice question of construction, no doubt possible as to the effect and import of the contracts. In none of the

cases is there a loan, and therefore there are no credits to be taxed. In *Metropolitan Life Insurance Company v. New Orleans*, 205 U. S. 395, 51 L. ed. 853, 27 Sup. Ct. Rep. 499, so far as appeared, the insurance company made loans, properly so called, to its policyholders, and the question now before the court was not raised or discussed.

The question as to where the alleged credits were actually held, that is, whether in New Orleans or New York, did not come up for the decision of the court, as it did in the case of the Metropolitan Life Insurance Company vs. New Orleans, cited in the opinion; for the reason that the court has held that these advances were not loans or credits in such a sense as to subject them to taxation.

VIGOROUS MANAGEMENT FOR THE STANDARD LIFE.

Frank A. Wesley, who from the organization of the Columbian National Life Insurance Company, of Boston, has been connected with that company and in recent years as its director of agencies, has resigned to become the vice-president and manager of the Standard Life Insurance Company, of Pittsburg, into which the Standard Mutual Life Insurance Company of that city is being converted.

Vice-President Wesley assumes the duties of his office on May 1 next; and it is expected that, under his vigorous management, the Standard will quickly take its place side by side with the two solid, reliable and enterprising Pittsburg life insurance companies, which have already made a conspicuous success of the business. The great progress, already made by the Standard under its mutual charter, furnishes a solid foundation upon which to build.

HOW PRESIDENT TAFT THINKS.

President Taft addressed two thousand members of railway brotherhoods at Worcester, Mass., last Sunday and in the course of a highly edifying talk said a few things of lively interest to the casualty companies.

This is part of what he said:

One of the great things your organizations have done is to bring to the public the necessity for legislation with respect to safer appliances and with respect to the employers' liability act. And you are now getting through Congress—I don't dare say I am getting it through, but it is going through—legislation which the railroads have agreed to, as I understand it, which is going, I hope, to be of the utmost benefit to you in your perilous and dangerous profession. I don't know whether railroad men in this country realize what a debt of gratitude they owe to Benjamin Harrison. He was the first one to bring to the attention of Congress the necessity for safety appliances in interstate commerce, and he pressed it home with an array of startling statistics as to killed and injured railroad men that shocked every friend of humanity. And he was the man who first secured and put on the statute book the law regarding car coupling and other safety appliances which has done so much to affect certain kinds of injury to trainmen in the railway service.

Will Sign Bill.

Apropos of that, I have just received a telegram informing me that the Senate passed the amendments to the employers' liability law and the House concurred in them and they are now ready for the President's signature. The newspaper men object that I don't announce my decisions in advance as much as I ought to, so that they might have a scoop, but I will let you into my confidence on this occasion by saying that I will sign that bill. The statistics of killed and injured railroad men are still sufficiently shocking to make me hesitate to read them, but I am going to. In 1893 there were killed 2,727 men, and injured 31,720, out of a total of 872,000. In 1908 there were killed 3,470; injured, 83,367, out of a total of 1,458,000. Of the total killed there were 20 per 100 miles in 1893, and, I am sorry to say, there were 40 per 100 miles in 1908. In other words the increase in accidents and injuries has been greater than the increase in the number of men.

Good Results From New Couplers.

It is most significant to follow the statistics with reference to car-coupling. In 1893, before the car-coupling statute was passed and before it was enforced, there were 349 men employed for each man killed by car-coupling. In 1908, there were 983 men employed for each man killed by car-coupling, an increase in the factor of safety of 181 per cent. In 1893, for each man injured, thirteen were uninjured. In 1908 there were sixty-two men uninjured for each man injured by car-coupling, an improvement in

the factor of safety of 376 per cent. Could you have a more conclusive demonstration of the usefulness of the statute which forced upon the railroads the adoption of the safety device with reference to car-coupling?

How much more we can do in this matter I don't know. A bill has passed both houses and will certainly become law which provides that the Interstate Commerce Commission shall form a uniform standard for sill steps, hand brakes, ladders, running boards and grab irons, and that they shall follow the standard thus laid down by the Interstate Commerce Commission and be inspected by that body. And it is hoped that the perfection and rendering safe of those appliances may have the same good effect that the car-coupling appliances had. At any rate, it is going on the statute book, and the Interstate Commerce Commission is going to do the best it can to bring about a better state of things, so that we shall not lose so many valuable lives.

The Fellow-Servant Rule.

Then we have the employers' liability bill. The law that we have had administered in this country was inherited from our Anglo-Saxon ancestors, and it was pretty rough in many regards. It wasn't so civilized as what we call the civil law which obtains in other countries with reference to dealings between individuals. It proceeded on the theory that every man should look after himself and the devil take care of the hindmost. And in the dealings between employers and employed that was the rule.

Well, we have got beyond that now. We know that is not right. There was invented in Massachusetts eighty or ninety years ago by one of the most distinguished judges that ever sat on the bench, what is called "the fellow servant rule," by Chief Justice Shaw. He said where two men were working together for a common employer, and one was injured by the other, that was a risk he assumed and he could not recover.

Well, we have come back to the conclusion now that the man who employs with the capital at his back is better able to look out for himself and save losses from injuries of that sort than the man who actually suffers injury. And, therefore, we ought not to insist upon the stringency of another rule, which is a common law rule, that if a man was injured by his own negligence, partly or wholly, he could not recover at all from his employer.

Liability Law Amended.

This employers' liability act for interstate commerce employes has now been amended in such a way as to leave to the jury the determination as to how far the man's fault entered into the accident and leaves to it the amount which the injured man ought to receive as a verdict and the fellow-servant rule is abolished altogether.

That is hard on the railroad companies—at least, harder than the old rule. But what it means is that it has got to go into the expenses of the railroads, and ultimately, if rates are fixed, it has got to come out of the public. In other words, the public shall stand the risk of those who go into perilous employment like this,

and whose lives are exposed every day in the year for the benefit of the public.

Now, I agree with my friends, the railroad presidents—if I dare call them my friends, and I dare—that it may be a long time before they figure out of their rates the fraction of increase necessary to meet this additional liability. But it will come ultimately, and it is better that it should come.

I am hopeful, indeed, that before many years have passed we shall be able to adopt a system of arbitration by which there shall be settled promptly on rules specified with the same degree of certainty that they are specified in an insurance policy how much a man shall receive for an injury, proportioned to the wages he gets and to the disabling character of the injury, so that it shall be uniform; so that one man shall not receive \$25,000 for a "railroad spine," which passes away under the kindly influence of a large verdict, and the fellow whose legs are cut off shall go without anything because it happened that his injury was due in some degree to his own negligence.

Compensation Act Needed.

In other words, I think we ought to have uniformity of award and dispatch and quickness in award, so that lawyers may be eliminated and the money may go directly to the object to which it ought to be devoted, to wit, the injured man or his family. It will rid the courts of litigation which now are loaded down; it will make the awards reasonable and quick, and there will be no division of the money

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

paid to the widow and the orphans or to the helpless cripple.

That system is forcing its way in Europe, and I hope we may have it here. In that way good feeling between the company and its employees will be facilitated, justice will be done, the railroads can calculate with the utmost accuracy by statistical reference just how much money they will have to devote to that sort of liability, and I think everybody will be in better condition. The middlemen will be eliminated and only the employee on the one hand and the treasury of the railroad on the other will be affected. I want to assure you that these acts—four of them now pending in Washington in which you are especially interested—are going through.

Can Reduce Loss of Life.

There is one other act—that which requires the Interstate Commerce Commission to investigate the cause of all accidents. One of the great difficulties in this world is getting at the facts. The truth is, it embraces nearly all the difficulty, because if you could get at the facts, the underlying facts in medicine, you could cure nearly every disease, and if you could get at the underlying facts with reference to accidents and trace the causes, then you could meet the causes. And that is what this act proposes to do. It requires that they shall go down and investigate by hearing witnesses.

The suggestion has been made—I am not attacking the railroad companies on account of it—that it is easy to charge up a great many injuries to the negligence of the man who is injured. Well, of course, that is so. And too frequently it is the true explanation. But it is not always the explanation, and what we want to know is how often it is the explanation and how often it is not. And when it is not the explanation, we ought to find out the cause and remedy it.

And then, with respect to those things which occur through the negligence of the men themselves, you, my friends, are the moral agents that are going to reduce that danger, because your associates, being the elite of railroad men, can impose and do impose on applicants for membership such qualifications and such restraints as to prevent the recklessness which brings about accidents.

With you working toward that end, with the Interstate Commerce Commission and the railroads getting at the facts as to those accidents which cannot be avoided under the present arrangements, but which might be prevented by proper safety appliances, I am sure we can reduce this awful loss of life and the injury to a class of citizens that are among the best that live and thrive under our starry flag.

REMARKABLE SUCCESS ATTENDS CHANGE OF BASE.

The Reliance Life Insurance Company, of Pittsburg, Pa., since changing from the net level premium method of valuation which had resulted in an enormous decrease of its surplus and also indirectly in its new business costing more than could prof-

itably be so expended, and likewise in such a manner as to result in heavy lapsation, and substituting for that method the modified preliminary term system which lays down distinct lines as to what can profitably be paid for new business and thereby affords the management a guide in making expenditures, has been making a remarkably good record in the matter of new business, though at materially diminished cost to the company.

Thus, in the month of March of this year the company issued policies to the amount of \$1,421,850, or a business more than \$200,000 larger than it had ever before transacted in a single month, even under the old relatively high-pressure conditions.

This new business is now secured, likewise, under so diminished pressure that the lapse rate has, in the last twelve months, been running between 11 per cent. and 12 per cent., including business in its first and second year, which is very low, taking into account the fact that the entire business of the company is relatively new.

The management of this excellent company is specially to be congratulated upon the record which it is making, particularly since, by following this course, the results of relatively extravagant management should soon be offset by the profits realized by the more economical conduct of the business.

THE WILLIAM BROTHERS BACK IN THE WESTERN AND SOUTHERN.

The William brothers, who built up the Western and Southern Life Insurance Company, of Cincinnati, and who several months ago sold out their minority interests because they could not agree with the holders of the majority interest as to the policy pursued by the company, have now bought out the majority interests, the purchase price, it is stated, being \$1,110,000. The company is in a prosperous condition, with admitted assets of \$4,869,882; liabilities, exclusive of capital, \$4,746,513, and net surplus to policyholders of \$123,369. It has the fifth largest industrial business in the United States, only the Metropolitan, Prudential, John Hancock and the Life Insurance Company of Virginia outranking it. Its income in 1909 was more than \$2,000,000 and its insurance in force nearly \$45,000,000.

TAKING OVER MEMBERS AS INDIVIDUAL POLICYHOLDERS.

President Hope Thompson, of the Northern Life Insurance Company, of Rock Island, Ill., announces that his

company is, with the approval of the Superintendent of Insurance of Illinois, taking over the members of the Fraternal Tribunes, on a monthly premium term policy, issued only upon a fresh medical examination unless at least two-thirds of the members of a lodge accept the proposition, in which case they will be insured in a body, separate policies being issued to each, without an examination, upon the condition that there shall be an impairment lien of 40 per cent. upon each certificate so issued, the same to be reduced in equal portions during the eight years next thereafter until extinguished, or to be removed immediately upon the holder passing a satisfactory examination.

The stockholders of the Connecticut Life Insurance Company, of Hartford, Conn., will meet on May 3 to vote on the proposition to increase the company's capital from \$150,000 to \$300,000.

A FORMIDABLE REPORT.

The report of the Massachusetts commission on old age pensions, annuities and insurance, submitted to the legislature last week, is a formidable document, the contents of which the average man would want "a week off" to digest. The legislative insurance committee had a hearing on the document Monday, and if it should report thereon by Wednesday of this week, the final date established for certain joint committee reports, it will have accomplished quite a job.

The commission reaches the conclusion that any scheme of non-contributory pensions in Massachusetts or any other American State seems inadvisable and impracticable, because of (1) the heavy expense, (2) the enervating influence on character, (3) the disintegrating effect on the family, (4) the unfavorable effect upon wages. One of the commissioners, James T. Buckley, expresses his dissent from the opinions numbered 1, 2 and 3 foregoing. The commission also believes the adoption of any scheme of compulsory insurance in Massachusetts to be inexpedient at the present time, holds that the practical objections to it are weighty and that the idea itself is essentially distasteful to Americans.

The commission recommends the passage of a bill to authorize the cities and towns of the Commonwealth to establish retirement systems for their employes, and submits drafts of a bill for that purpose. It also recommends, with drafts of bills pertaining thereto, the establishment of retirement systems for State and county employes. The three bills are identical in their essential provisions, which also include sections calling for a measure of supervision by the Insurance Commissioner.

Constructive recommendations offered by the commission are (1) the inclusion of "thrift" among the subjects of compulsory instruction in the public schools; (2) calling the attention of employers and employes to the opportunity for the purchase of insurance and annuities offered by the Massachusetts savings bank insurance department; (3) commending to the consideration of corporations of a permanent character, especially public service corporations, the schemes of old age insurance and pensions which have been instituted by various large concerns. In order to bring this recommendation within legal possibility,

the commission recommends the enactment of a general law authorizing employers and employes to form an association for the payment of annuities or pensions out of funds created by joint contributions under supervision of the Insurance Commissioner. The commission also directs (4) attention to the new opportunities for old age insurance offered by industrial insurance companies, and says that this insurance has been greatly cheapened and improved during the last year. The commission further suggests (5) that in due time the laws governing the operations of fraternal be amended to enable them to pay old age benefits under supervision by the Insurance Commissioner. The sixth recommendation calls for enactment of measures providing for the establishment of retirement systems for public employes.

Two members of the commission, Messrs. Buckley and Huddell, dissent from the recommendation for legislation permitting employers in Massachusetts to establish retirement, annuity or pension associations for their employes. Mr. Huddell also dissents from those parts of the report in which opinion is expressed favorable to contributory pensions and to compulsory insurance.

Its Seventy-fifth Year.

On Friday last the New England Mutual Life Insurance Company completed three-quarters of a century of corporate existence, having received its charter April 1, 1835. For conservative reasons the company did not begin business until February 1, 1844. Its long career of activity has been marked by an emphasis on all that is best in mutual life insurance, and it, therefore, deservedly enjoys a large and increasing prosperity.

License Revoked.

The license of the United Surety Company of Baltimore has been revoked by the Massachusetts Insurance Department, the revocation taking effect last Friday, the first of the month. This action followed quickly upon similar action in the State of Minnesota. Impairment of the company's capital to the extent of over \$8,000 and reinsurance of Massachusetts burglary risks in unauthorized companies are items that contributed to the department's action. It is understood that a change of control is under way, which will greatly improve the position of the company.

New England Brevities.

Last Friday night fire broke out in the Lozier Motor Car Company's garage in the Brighton district of Bos-

ton, and in less than an hour the building was gutted, and a number of automobiles, valued at \$50,000, were destroyed.

The Chelsea (Mass.) Board of Control has placed a blanket insurance policy on the city's property for nearly \$1,000,000. Next Tuesday (April 12) marks the second anniversary of the Chelsea conflagration. The rebuilding of the city has progressed on substantial lines, largely made possible by the prompt indemnity provided by the fire insurance companies. No wonder the municipality believes in insuring its property.

The real estate and woolen interests have joined the Boston Board of Fire Underwriters in petitioning Mayor Fitzgerald, of Boston, for the retention of Fire Commissioner Parker. It is thought very unlikely, however, that the reappointment will be granted.

The stockholders of the Connecticut General Life of Hartford are to meet on May 3, to act on the proposition of the directors to double the capital stock of the company by increasing it from \$150,000 to \$300,000.

Salem, Mass., has appropriated \$4,500 for an auto chemical and combination wagon for its fire department.

The Massachusetts legislative committee has reported the bill to make insurance agents who do not turn over premiums guilty of larceny. It has reported leave to withdraw on the Carlton valued policy bill, and reference to next general court on the bill to allow total disability clauses in life policies.

The companies writing automobile liability insurance in New England have reached a modus vivendi as to rates in that territory.

TO WIN IN COMPETITION

Represent the Company whose agents have the strongest fighting material and the most telling arguments. Everyone knows the superiority in low cost to policyholders, (due to high interest earnings, low death and expense rate) of

FIRE AND TORNADO.

One of the most important questions to be taken up at the semi-annual meeting of the Western Union at Washington next week is that of writing combined fire and tornado policies. Years ago when fewer union companies wrote tornado insurance than at present, that organization passed a rule that fire and tornado insurance should not be written in one contract. In some parts of the West, particularly in Iowa, non-union companies write a large part of their farm business under such policies, and it is understood that the union companies which write farm business generally desire the same privilege. The Continental writes a combined policy, and George E. Kline, its vice-president, will make his debut as a union member as one of the committee having this subject in charge.

Wanted: A Plan.

In farm insurance the combined policy is regarded as valuable, because it forces the assured who carries tornado insurance to take an amount of it bearing some reasonable ratio to the value of his property. Tornado insurance is generally profitable to the companies under such circumstances. Farm insurance is unprofitable in so many places that any fair plan which will show a profit on the entire business done with the farmers is likely to be welcomed, especially when the farm experience in some parts of the country is growing worse rather than better.

WANTED: A FEW GOOD SPELL-BINDERS.

The next annual meeting of the Fire Underwriters Association of the Northwest will be held at Chicago October 5 and 6. This was decided at a meeting of the directors held last week. Interest will now begin to be taken in the program. President C. T. Deatrick has his eye on some good material and is understood already to have promises from one or two speakers.

It will be Mr. Deatrick's endeavor to make this not only a good program, but one of interest and profit to field men. The program last year was good, but it was of most interest to managers and students of the broader questions of fire underwriting. As the bulk of the membership is made up of State and special agents, Mr. Deatrick is of the opinion that their preferences should receive first consideration.

The preparation of a Northwest program is no longer an easy task—if it ever was. So much fine talent has

appeared at past meetings that mediocre papers would fall below standard. So many of the men known to have ideas and the ability to express them already have appeared at Northwest meetings that the field of available speakers in the business is getting narrowed.

MANAGER KLINE HERE.

George E. Kline, former Western manager of the Continental, arrived yesterday to assume his new and enlarged duties as underwriting manager for the Continental, Fidelity-Phenix and Fidelity Underwriters. On the eve of his departure the office force of the Western department presented him with a frame containing photographs of 126 of the officials and employees of all grades, the pictures having been taken on the quiet within a few days.

Mr. Kline's elevation places him in what is probably the most commanding fire insurance position in America from an underwriting standpoint.

The Baltimore Fire Insurance Company has been incorporated at Annapolis with authorized capital stock of \$100,000. Seymour Mandlebaum, Frederick W. Feldner, Douglas H. Gordon, William S. Thomas and R. Gordon Williams are the incorporators. Mr. Mandlebaum is a very versatile insurance operator and banker, being an officer or director in practically every prominent concern in Baltimore.

The regular monthly meeting of the Barebones Alumni Association was held Tuesday evening at the office of the Home Insurance Company. L. M. Stevens, of Samuels, Cornwall & Stevens, talked on "The Moral Obligation of the Broker to the Assured." This will be the last meeting of the society before ending the season with the "spring dinner" about the middle of May.

The Franklin Insurance Company, of Washington, D. C., was licensed in New York on Tuesday to transact the business of fire insurance. The company has a paid up capital of \$200,000. This is the "old-timer," of which John A. Kelly, of New York, recently secured control and was elected president, increasing his chain considerably.

Where an agent is personally interested in the property insured, no policy issued by him thereon, or act done by him in connection therewith, binds the insurer unless it knew and assented to it.—Dull v. Royal Insurance Company (Mich.) 533.

IN NEW MEXICO.

A tabulation of New Mexico fire insurance figures show a loss ratio for 1909 of 73.3 per cent. on premiums of \$604,977, the average premium income per company being \$16,400, and the average rate \$1,817. The twelve companies writing the largest business had a loss ratio of 78.7 per cent. and the American Central, Home, Imperial and Scottish Union each had a loss ratio of over 100 per cent., that of the American Central being 118 per cent.

WESTERN STATE ANNUAL FIRE MEETINGS.

Western State associations of local fire insurance agents now are announcing the dates of their summer meetings. That of Arkansas will be held in May and those of Missouri and Iowa in June. In a number of the Western States the officers of these associations have been doing much hard work in the past few months for the good of the cause, and they hope to see the reward of their efforts at the annual gatherings.

The National Association.

That the local agents need to do everything in their power to protect their interests can scarcely be doubted by one who pays any attention to the situation in the West, and it may be just as bad or worse in some other sections.

The National Association met with marked success in securing the co-operation of the companies to stop overhead writing, but the victory won a decade ago should not be regarded as a settled question. From time to time there have been whisperings to the effect that some of the companies might find it inadvisable to remain on the co-operating list and a very few of them have withdrawn or been cut off by the National Association. If present tendencies continue there is danger that other companies will find themselves compelled by their own interests to take another position on this question. A partial canvass of western towns shows that in a great many of them the largest risks have left the control of the local agents for that of a large city broker. At present the brokers seem generally to place considerable of the business through the local agents, allowing them 5 per cent. and keeping 10 per cent. If the large city brokers or agents—for frequently they are regular agents in their home cities—continue to gather in the outside risks the question is likely to become a live one with some of the companies whether the favor of the large city agents is not better worth seeking than that of their country agents.

Loss of control of large risks by local agents is something the National Association cannot control. Even if the association should be completely successful in getting regular companies to stay off when part of the line is placed at a cut rate, the risks will go to large city agents if they are able to give better service, as they undoubtedly now are able to do in very many cases.

If there were enough non-co-

operative companies to carry these large risks, the brokers would not be obliged to pay the local agents even 5 per cent. for issuing the policies. It is up to the local agents individually rather than to the National Association to make the country agency plant so valuable to the companies that they cannot afford to disregard its interests in favor of the large city agents.

As to Legislation.

Another question to which the State associations of local agents and the National Association as well, need to give their best thought is that of legislation. Aside from the danger of ill advised legislation of an inimical character, which the local agents need to be organized to resist, there is need of co-operative effort on the part of the agents to get some legislation. In many of the States the authorized companies either are taxed by the State on their net premiums or by the municipalities for the benefit of fire departments. In some of these States, if there is any law to compel assured who deal with unauthorized companies to pay a tax on their premiums, it is so weak as to be ineffectual. This is furnishing the non-admitted companies a lever with which to pry the big business out of the hands of the local agents.

Western Whiskers and Insurance.

Another serious menace to agents of standing and character is the absence of any qualifications for agents. A few days ago examinations of barbers began in Chicago under a new law for setting standards for tonsorial artists and licensing them by those standards. While the State considers it important that citizens should be protected from the loss of whiskers, which would not have been cut off by a true artist, the loss of one's home or property through the ignorance of a so-called insurance agent, who pretends to insure but does not, is unworthy of the legislative attention. Nothing is likely to be done to relieve local agents of the competition of these premium grabbers until the agents themselves take the initiative.

A special meeting of stockholders of the Insurance Company of North America is on to-day in Philadelphia to vote upon an increase in stock from \$3,000,000 to \$4,000,000. Stockholders will be given the right to subscribe for one share for every three owned at \$15. Stock is now selling at 24, and pays dividends of 12 per cent. The par value is \$10.

STOCKDELL VINDICATED.

II. C. Stockdell, former general agent of the Phenix Fire Insurance Company of Brooklyn, at Atlanta, Ga., who was removed from office because of an alleged shortage, has been completely exonerated by the Phenix officials of wrongdoing. In a letter addressed to Mr. Stockdell, Major Charles F. Hard, who succeeded him as general agent, says:

It affords me pleasure to state that all of your affairs with the Phenix Insurance Company have been settled satisfactorily and in accordance with agreement.

I desire to say that certain newspaper references to your affairs with the Phenix were, I think, of such a nature as to give a very erroneous impression to the public of actual facts. So far as I am informed and believe, the officials of the Phenix were not a party in any way to the publications. Personally, I regretted very much to see the publications, for I felt that they gave an unjust impression about you.

It affords me further pleasure to say that there is nothing in connection with the affair which reflects in the least upon your personal character and integrity. My connection with you has been very agreeable, and you have been frank and above board with me in every particular. I desire to express my appreciation of the very manly way in which you have acted throughout a very trying ordeal, and of your very courteous treatment of me.

A RECEIVER FOR THE UNION NATIONAL LIFE.

On Thursday of last week, United States Circuit Judge McPherson, of Philadelphia, appointed Charles H. Matthews receiver for the Union National Life Insurance Company, on the application of two holders of profit-sharing certificates, who alleged that over \$132,000 had been squandered. This is the company which the insurance commissioner of Pennsylvania refused to license several weeks ago.

PLATE GLASS.

Reports of plate glass breakages with no cause given for the damage are becoming altogether too numerous, says the "Budget" of the Maryland Casualty Company. It is of inestimable value to the company to know the cause of breakage of every plate that it is called upon to replace. This is obvious when it is understood that breakages from certain causes are not contemplated by the policy. But another important reason for learning the cause of every breakage is the possibility of preventing further losses on the same risk from a similar cause.

It may be impossible to ascribe a reason for a breakage when it is first inspected, but if the glazier who makes the replacement is asked to examine the frames carefully, before and after the broken plate is removed, the cause is often apparent, and if it be a case of worn out or defective frame, it is safe to conclude that the frames containing the other plates on the premises are equally worn and should be either repaired or replaced entirely. We are confident that a little attention on the part of the agent, at the time of adjusting a plate glass loss, will help materially in holding our loss ratio in check.

Chicago's Plate Glass.

Action on the organization of a plate glass conference at Chicago is not progressing with great rapidity. It may be as well that there should be more deliberation at the start. J. I. Loeb, of the New York Plate Glass, has the appointment of a committee of five to draw up a form of agreement. He is exercising care in selecting for the committee men who will be representative and who will work. Even some managers whose views are not generally known are averse to any attempt at a heavy increase in rates. Such action will merely unsettle the business and give a chance of playing even or ahead by companies which have loaded up at cut rates. Sentiment appears to be rather in favor of a sufficient advance to take care of the increased cost of glass, agreement for higher rates on some unprofitable classes, such as clamp set glass, and some control of the brokerage situation if possible.

St. Louis' Plate Glass.

A very interesting situation exists at St. Louis, which is likely to result to the disadvantage of the assured. This is due to the attitude of the Painters Union in that city making a demand upon the seven firms which represent the big plate glass manufacturers that the glaziers employed to make replacements be paid a con-

siderable increase in wages. The union refused a compromise offer of 47½ cents per hour, and as a result the seven firms, agents of the plate glass manufacturers, have abandoned the glazing branch of their business from March 14. The plate glass insurance companies operating in St. Louis had heretofore been depending upon these firms for their replacements and this action leaves them in an awkward position, being dependent upon the Painters Union for replacements unless they, as has been suggested in some quarters, take advantage of the clause in their policy which gives them the option of settling losses in cash on the basis of the market value of the plate glass at the time of the breakage, thus leaving the assured to make replacement as best he may.

CHICAGO'S TONING.

When New York and Philadelphia failed to respond to the magnetism and personal pulchritude of the financier fresh from the mental purlieus of the United States Treasury at Washington as concreted and represented by the very honorable Robert B. Armstrong, assistant secretary under the equally illustrious and honorable Mr. Leslie M. Shaw, also of recent New York memory, he decided that Chicago needed "toning" insurance-wise and was frank enough to so state in an address his advance agent had deftly procured from the bankers and business men's association of the city to deliver.

The "toning" has been accomplished to the full extent of his ability, the play is over, the curtain is down and the lights are out. How Chicago is digesting the treatment it received remains for the future to reveal, but it is pretty safe to assume that the vaccination process is entirely successful and Chicago is thoroughly immune forever after.

Impairment \$80,000.

C. C. McChord, who headed an embryonic concern of Louisville, Ky., and which was "absorbed" by that whale of Armstrong's, seems to now be the only pebble left on the beach since the tidal wave hit shore. He came under the hypnotic or animal magnetic spell of the Honorable Bob and became vice-president, "for services rendered," but not yet compensated. He is in charge and has given out a statement to the duped stockholders to the effect that the impairment is about \$80,000, and suggests that this be offset by a reduction of capital sufficient to enable the crippled to buy crutches from the surplus.

One item in the assets of \$40,166

is a note of R. H. Clark, with pearl button collateral, credited as an asset, not belonging to the company at all and being a transaction used to swell the assets.

A claim asset of \$22,500, growing out of the purchase of Evansville Electric Railway bonds, is also eliminated, and it is expected that the West Virginia department will cut down the \$50,000 valuation at which the home office building is carried to \$15,000. In the meantime the other casualty companies have been rapidly absorbing what agency connections and business the Consolidated had.

The Salt Lake City local agents have adopted a resolution providing that no agency should take a second agency of any company hereafter and that all second agencies should be closed out as rapidly as possible. The Cincinnati and the Glens Falls each have two agencies and have taken no action toward discontinuing them.

H. H. Lowell, well known in casualty circles in Chicago, has gone to the Kansas City Casualty as manager of the surety and liability departments.

THE FIRE OUTLOOK.

The address of Charles L. Case, U. S. manager of the American branch of the London Assurance, had this to say in his recent address on the outlook for fire insurance interests:

Of course we are all looking, particularly at the early part of the year, for an increase, excepting a few of us who realize that we are getting all that we are entitled to—all that we can earn—and instead of looking for more we are looking to render service that shall prove sufficient to justify a continuance of our present income, but this I know is quite exceptional.

It is my judgment that to secure an increase of salary one should deserve it by giving his employer a largely increased measure of the following five qualities: Tact, executive ability, education, enthusiasm and loyalty; and I have it in mind to speak to you about five minutes, more or less, on the importance of each of these qualities.

First of tact, which may be defined as the art of saying and doing the right thing at the right time; an insurance man needs tact as to the general public whom he meets, as to those below him in rank in business and those above him. He needs tact as to the public in being quick and eager to see their point of view—he needs to know his customers and to be desirous of satisfying all of their reasonable demands, and of quietly, gently and inoffensively refusing their unreasonable requests. It is highly desirable that he should know them by sight; he should have his mind so on his business that the minute a customer or a customer's representative enters the office that he should know him; that he should be able to call him by name, and not apologize by repeating that miserable, worn out old story that his face is very familiar, but his name has really escaped his memory.

It is very necessary to exercise a tactful courtesy towards one's inferiors in rank. They are your associates—on them must fall very much of the work, and the work will be better done, and you will get the credit of its being done, if you exercise a careful, discriminating, tactful courtesy to them by telling them what you require, and if necessary in pointing out wherein they fail to meet your just requirements. They are inferior to you in rank because either they have less ability or less experience than you.

Even greater tact is necessary in dealing with one's superiors—perhaps I can illustrate this by telling you of two special agents. Every time Mr. A. came into the manager's room to talk with him about the conditions in his field he came in with an air of dissatisfaction, criticism—that the company that he served was the most particular, exacting, hard company that was doing business. It was perfectly surprising, according to his tale, that it got any business at all—that it held the affections of its local agents, and this notwithstanding the business was growing gradually and with a satisfactory loss ratio. The manager's pulse and temperature dropped from five to ten points every time the special agent came to the office, and sometimes the manager felt

that really he ought to send in his resignation by cable. All this because of the temperament of the special agent, he did not mean anything by it, but he took a gloomy, pessimistic, critical view of life and that colored everything he said and did.

About the same time the company had a special agent of a totally different type—he was very active—he had his good points, but his idea of tact towards the manager was to flatter the manager. Everything the special agent said and did exuded the unctuous oil of flattery. Everything was for the best in this best possible of all worlds, agents and public were hungry and anxious to represent his company and to secure its policy—never was manager quite equal to his manager, but dropped of all its verbiage what he said was, in substance, that in his judgment the manager was such a fool that he could be influenced, or controlled, or managed by what the special agent probably called his diplomacy, but which the manager called silly flattery. Neither of these special agents is with the company now—the yboth had an assisted departure.

Executive Ability.

By this I mean, of course, the power to get things accomplished and to carry responsibilities. This is a very precious gift and does not come altogether by nature. It needs to be cultivated. Before one reaches a position of any considerable importance he has those under him to whom he gives instructions. Now, let me tell you a word about those instructions—never for one moment think that the giving of instructions means that they will be carried out. It is the first duty of an executive officer to see and to know of his own knowledge that the thing that he ordered done is being done, or has been done. Never take anybody's word that it has been done; on the other hand, take for your motto, have it in mind if not in type, "I'm from Missouri, show me."

As to carrying responsibilities, most of us are prone to burden ourselves with other people's responsibilities to the neglect of our own. It is as easy to carry other people's responsibilities as it is to bear their misfortunes. We are usually quite ready and willing and fully capable to carry the responsibilities of the one above us—we can all poke the fire or run the hotel, or manage an insurance company better than the one who is doing it; but as for our own responsibilities we are sometimes slothful, neglectful, indifferent. No great advance in salary will ever come to one who cannot assume and worthily carry responsibilities. To carry them thus requires industry, a cool head, careful judgment and quick decision.

Education.

I am sure that one should bring to the business in these times both a wide and accurate knowledge, first technically as to our business. We must know the technique thoroughly. At this point I think I hear some of you saying that some of us older ones have very good positions and yet know very little about the technical side of the business—the efficiency of sprinkler systems, and the new and modern methods of construction, etc. Well, I have two answers to that objection, both of them good. First, that

we should be very much better off if we did have the technical knowledge; and secondly, that we acquired our positions when technical knowledge was less in demand, less an essential condition to important positions than it is now. Therefore, you make a mistake if you think because some of us whom you think are without technical knowledge, hold good positions, that it is of no particular importance for you to get it. Don't make that mistake.

It is not sufficient to know only insurance. You must have a wide and deep and broad knowledge to be of any particular importance in the world. You must have the ability to express yourself in writing, and if possible in speech; the power to say clearly what you desire to say and the power to stop when you get through. This comes with knowledge—sometimes. You must cultivate both the substance and form of expression.

Enthusiasm.

It is hard to define enthusiasm, it is not activity, industry, application, faithfulness—it is more of an intensity of interest in what one is doing. It is not only putting one's back into one's work, it is mixing the sweat of the brow and the gray matter of the brain and the red blood of the heart with the work. Let me illustrate: There were two clerks working side by side in the accounting department; a long delayed, outstanding balance finally comes in. The manager, who, of course, has that balance in mind, as managers always have everything in mind, walks out to the accounting department and asks the clerk who has enthusiasm, "Did that Western balance come in this morning?" The clerk who has the enthusiasm replies, "Yes, Mr. Manager, I was going to tell you about that; it came in the first mail, \$765.23. I am awfully glad about that." Supposing the manager had asked the clerk without enthusiasm if the check had come in. He would have received this kind of an answer, "I don't exactly remember; it seems to me I did see a check in the morning's mail from that agent or some other agent for about that amount, or some other amount. I will look it up for you and let you know in a little while." All this in a calm tone and manner that indicated that his salary was in no degree dependent on the receipt of this particular check. That's the difference; and that difference carried on all through the work of these two men brings to one of them a probable advance in salary, and to the other one a bitter disappointment.

The Preferred
ACCIDENT INSURANCE COMPANY

SUPERIOR POLICIES

KIMBALL C. ATWOOD, President
290-292 Broadway, New York

ment, mingled with surprise as to why he does not get an increase in salary.

Loyalty.

This quality of wholehearted allegiance has the value of scarcity, and, like other scarce qualities, it is very precious—it is worth striving for. We are inclined to be disloyal in thought and deed. If we are told to do something human nature frequently tells us either not to do it at all or to do it in some other way than the way in which we were instructed to do it. Fight against this inclination—strive mightily for loyalty—to render absolutely loyal service. I shall have to go abroad for an illustration of this quality. There is an old German saying that strikes me as very apropos:

"Whose bread I eat, his song I sing."

You are eating some insurance company's bread—sing their song, not anybody's else's, and sing it with all your might. If your insurance company believes that they may desire a particular line of insurances, say on sprinklered risks at the current low rates, it is not your business to tell them that dwelling houses would be more desirable, even at the increased commissions, or that frame business in Atlantic City at the rates is more desirable, but it is your business to find out how many sprinklered risks there are to be had, and then get every last one of them on the books of your company just as soon as possible. That is allegiance—that is loyalty.

While I cannot overstate, it is not possible to overstate the value of loyalty, yet to my mind there seems to be nothing inconsistent between real, hearty loyalty to one's employer and the taking or considering of another position. Indeed if another position comes along that offers not only a much larger income, but greater responsibility, there is nothing disloyal to your present employer in considering or accepting this greater opportunity of life. The loyalty to yourself and to your family, to those to whom you wish to give opportunities and advantages that have perhaps been denied to you, may oblige you to take the new position, but always with the utmost loyalty to your present position as long as you fill it and afterwards. It should be impossible for one to do anything that would be unfair to his former employer.

I realize that some of you may say that loyalty is all right enough, but I am working under conditions where I find that I cannot give wholehearted loyalty. My friend, if you are sure of this, I have some good advice for you. Get a position where you can give it and get it by the first of next month, and to-day is the 22d.

From time to time exceptional opportunities come for a larger and better position than one holds at present. Sometimes, very infrequently, the man holding the higher job dies—you may think that he is an unconscionably long time dying, but, nevertheless, he will die eventually and some few officials are wise enough and fortunate enough to be able to retire for a few years of grace before the final summons comes.

There is a sort of a perpetual, standing committee always in session to select men to fill these vacancies. This committee are always looking over, carefully canvassing the qualities of

the possible candidates. You may not realize this, but let me tell you it is so, and they are looking for men of sound character, good habits and firm health—these are the foundation, but they are looking for those who also possess tact, executive ability, education, enthusiasm and loyalty. I hope that in due time they may have no difficulty in finding these desirable qualifications in large measure among those to whom I have had the honor to make this address.

NEW HAZARDS ABORNING.

French aviators, confident that their tribe is soon to increase, and that to "rules of the road" analogous enactments for the air will have to be established, are drawing up sometimes a code to be observed both by themselves and by the people who will still potter about on the surface of the earth, says the "New York Times."

Aerial navigators, it seems, want to be compelled to fly at no less height than 150 feet and to get permits before they pass over cities. On the other hand, they insist that the owners of high buildings shall keep lights burning on top of them all night, lest an unlucky aviator come to grief against the upstanding walls, and they are particularly insistent that all wires strung far above the ground should be disclosed in the daytime by a flag every 600 feet and by as many lamps at night.

Thus will the aeroplane complicate our already sufficiently complex existence! But of course the airships will have rights and duties, and it is well that somebody is already giving thought to both. In good season we promise to have a riding light on the flagstaff of the "Times" building, and bow lights, red and green, if they also prove to be necessary.

NON-LLOYDS.

When Consul, Jr., died the other day in Dallas, Tex., it was currently press-dispatched that his life was insured for \$50,000 by British underwriters, showing very clever press agency work, but doing British underwriting a distinct injury.

Consul, Jr., was a trick monkey of large financial value as a living and working entity. Dead, he isn't worth the dime tip to the janitor to remove him. The real truth of the matter, it is understood, is that some form of a gamble on the continued producing power of the monkey as a vaudeville attraction was entered into—for a good round premium (and gamblers are just as generous winners as they are losers)—by some of the gentlemen syndicates at London Lloyds and the adopted father of Consul, by which organized form of contract the aforesaid syndicate was to

be liable for loss occasioned by the monkey's loss as an asset.

This is but one of the queer risks which these groups at Lloyds and others are willing to take as side or "curb" lines, as the term is applied in Wall Street. The toes of dancers, the fingers of pianists, the voices of singers and the results of elections are freely made the subjects of gambling hazards by these gentlemen of speculative turns of mind.

In another column is an item of news from London to the effect that another one of the syndicates at the regular Lloyds was in trouble financially. It is remarkable that the insurance departments of the several States cannot devise ways and means to prevent their shell game operations.

Respectfully referred to the National Convention of Insurance Commissioners.

George H. Brainard has been appointed a general agent in New York city for the Casualty Company of America, with headquarters at 1170 Broadway. He has an extensive personal acquaintance with and controls a large amount of business among the leading contractors and builders of New York city.

TALK OF VALUE.

The New York legislature—every member of it—has received from President Edson S. Lott, of the United States Casualty Company, a memorial urging that a clause be inserted in the pending bill relating to standard provisions for accident and health policies. The same has been forwarded to the heads of the insurance department.

It urges that the courts have the right to review the decisions of the insurance department.

It follows:

I beg you to bear with me while I give you my reasons: At the 1908 meeting of the National Convention of Insurance Commissioners, held at Detroit, the question of "Standard Provisions for Accident and Health Insurance Policies" was discussed and referred to the committee on laws and legislation of that body.

Thereafter the chairman of the committee (Judge C. C. Lemert, State Superintendent of Insurance of Ohio) requested officers of casualty insurance companies to make such suggestions to the committee, concerning standard policy provisions, as they deemed advisable. Early in 1909 a meeting of Judge Lemert's committee was held in Chicago for the purpose of drafting a bill concerning standard provisions for accident and health insurance policies to be presented at the next meeting of the National Convention of Insurance Commissioners, and officers of casualty insurance companies were invited to attend. A number of such officers did attend the meeting, but the consensus of opinion among them, at that time, was that legislation concerning standard policy provisions was inexpedient. However, the committee formulated a set of questions, which were mailed to officers of casualty insurance companies, calculated to draw information which might be of value to the committee. Thereupon there was a joint meeting of the executive committees of the International Association of Accident Underwriters, the Board of Casualty and Surety Underwriters and the Detroit Conference (which associations comprise very nearly all the companies writing casualty insurance in the United States), at which meeting a bill relating to standard provisions for accident and health insurance policies was agreed upon and presented to a meeting in New York of the said committee on laws and legislation of the National Convention of Insurance Commissioners. On June 9, 1909, the latter committee (at a meeting held in New York) tentatively agreed upon a draft of a bill. At the annual meeting of the National Convention of Insurance Commissioners, held last fall in Colorado Springs, the committee on laws and legislation gave a hearing to casualty insurance underwriters, and finally presented a bill to the convention which was adopted as the convention bill, to be used as a model by State Commission (or Superintendents) of Insurance when presenting bills for standard policy provisions to their legislatures. This bill is the same as the bill (Senator Grattan's) mentioned at the top of this letter,

except that Senator Grattan's bill does not contain the word "wilful" in the penalty clause, does not contain the words, "nor shall anything in this act apply to or affect contracts of life insurance or contracts supplemental thereto which shall contain provisions intended to safeguard such life insurance against lapse or that shall provide a special surrender value therefor in the event that the insured thereunder shall, by reason of accidental bodily injury or disease be unable to continue the premium payments thereon," and does not contain the words "provided that upon the petition of the company, the opinion of the Superintendent of Insurance shall be subject to review by any court of competent jurisdiction."

Casualty insurance underwriters did not look with favor upon legislation concerning policy provisions, believing that competition would accomplish more than legislation for the policyholder, and that if legislation on the subject should start, each State might enact a different law, causing the insurance companies to write a different policy for each State, a task difficult to describe in a letter but burdensome in the extreme. That competition has driven casualty insurance companies to give more and more insurance, without increasing the premium rate, is abundantly proven by the fact that the policies of the present are far and away more liberal than those issued ten, five and even three years ago, and underwriters would like to be left free to compete with each other in liberalizing their policies still more. But the model bill adopted by the supervising State insurance officials at Colorado Springs did not interfere with freedom in granting insurance benefits requiring, however, certain standard policy provisions, hence the only thing the underwriters had to fear was the chance that each State Superintendent of Insurance, in drawing a bill for his legislature, would make changes which would necessitate the issuance of a different policy for each State, or for a considerable number of States, a very great hardship for the insurance companies. Minnesota, at the request of her Superintendent of Insurance, had already (while the question was being agitated by other State officials) passed a standard provisions law. But it appeared to be acquiesced in by all that the Colorado Springs bill should be used as a model, thereby permitting the insurance companies to use the same policy in each State.

Since the Colorado Springs meeting, there has been introduced in the legislatures of New York, Massachusetts, Ohio, Maryland and Virginia bills requiring standard provisions for accident and health insurance policies.

The Ohio, Maryland and Virginia bills are identical with the bill adopted by the entire body of Insurance Commissioners at Colorado Springs, of which body, by the way, Superintendent Hotchkiss has the honor of being chairman of the executive committee.

The Massachusetts bill is the same as the Colorado Springs bill, except that it omits any reference to life insurance contracts. Senator Grattan's bill omits those things mentioned above.

The statements made above will, I

believe, be verified by Superintendent Hotchkiss.

I trust it may please you to aid us in having placed in Senator Grattan's bill the words, "provided that upon the petition of the company, the opinion of the superintendent of insurance shall be subject to review by any court of competent jurisdiction."

New York is the leading State in casualty, as in other insurance lines, and her example is very likely to be followed by others. Mr. Hotchkiss has also acquired much weight with other commissioners; and if he persuades you to depart from the "model" Colorado Springs bill in any particular, other commissioners will be tempted to make departures in their turn. Many will be tempted to add or omit this and that particular, and then our uniform bill will become a crazy quilt of patches. Uniformity is one thing; departure from uniformity may be anything and everything.

Please understand that underwriters do not regard this as a model bill in any strict sense. On the contrary, it is far from what we like or approve; but if we can only obtain uniformity, we are prepared to sacrifice much. Given uniformity of requirements, underwriting can gradually manage to adapt itself, even to what is onerous; but dissimilarity is an intolerable burden. We have suffered under that these many years, and now there are just hopes of relief in that particular.

It has been said that the right of appeal to the courts from an opinion of the superintendent is a natural right, independent of any recognition of it in the text of the law. If this is so, there can be no valid objection to acknowledging it by the clause we desire. With that clause inserted, the law will provide for a direct appeal at once from an opinion which we deem unsound. Without such a clause, we must either apply to the courts for a mandamus (admittedly a difficult and doubtful matter always) or else we must proceed in disregard of the superintendent's adverse opinion and take our chances of the statutory penalty.

In a given case of differing views regarding a certain form of policy, the superintendent would be right and we would be wrong, or vice versa. If we should be right, no penalty should follow our action, nor would it be morally right, or for the public interest that we should refrain from acting. We ought not to be restrained from following the right course.

We earnestly submit to you that we ought not to be exposed to such an alternative and that the correctness of the superintendent's opinion ought to be determinable, by the final authority, in advance.

The Alabama Fidelity and Casualty Company is being organized at Montgomery, with an authorized capital of \$300,000, \$100,000 of which has been paid in. A general line of casualty business will be done. T. E. Lovejoy, president of the Montgomery Bank and Trust Company, will, it is said, be president, and J. W. Kelly, a prominent local insurance man, secretary.

THE UNITED SURETY.

The passing of the control of the United Surety Company on Tuesday from the Knabe piano factory interests to Thomas H. Bowles, president of the Baltimore Trust and Guaranty Company, and associates, presages a third reorganization of the company and a change of executive management that may inspire confidence. The past of the company has been pitiful and pathetic. It had three presidents within a period of about as many months. Its administration has been in the hands of hopeless incompetents. It entered into an alliance in this city with the liquor dealers and brewers' associations to furnish saloon bonds for the dives and Raines law hotel keepers, and this is undoubtedly the primary reason for the depreciation of the repute and securities of the company, which led to the inevitable reformation. This alliance, it is reported, will be canceled by the new management.

Mr. Bowles, who heads the new controlling interests, was formerly one of the big general agents of the Mutual Life, and is an ex-president of the National Association of Life Underwriters, and is associated with prominent financial and insurance interests in Maryland that assures the putting of the company on a sound footing after its three years' existence in extremis.

The nearly simultaneous action of Minnesota in refusing to relicense and that of Massachusetts in revoking its license has contributed largely to the precipitation of the crisis which resulted in the new order of things in prospect.

Under direction of Mr. Bowles and associates, now in control, the stock of the company will, no doubt, take rank promptly.

NEW ORLEANS CASUALTY.

The New Orleans Casualty Company, with an authorized stock of \$300,000, has filed articles of incorporation. The company proposes to write surety and fidelity bonds, accident, steam boiler, automobile accident and all kinds of liability insurance. R. N. Sims is to be its president. Just how the organizers propose to overcome that absurd deposit law recently pushed through by Insurance Commissioner McGivney is not in evidence. It effectually bars it from other States.

Keighler, Gcglar & Co., of Philadelphia, has resigned the agency of the Frankfort Marine, Accident and Plate Glass Insurance Company, which they held for that territory.

ILLINOIS EXCISE BONDS.

Illinois agents and brokers are doing considerable business with saloon keepers, owners or lessees of buildings in which saloons are located, in securing indemnity bonds, to protect them against litigation under the Illinois dramshop act. Agents in all parts of Illinois find this a good side line. The Reisch Indemnity Company, of Springfield, Ill., incorporated for the express purpose, writes nearly all these bonds.

Suits for \$25,000 each were filed in Chicago recently against H. Palmitski, a saloon keeper, and Peter Simiter, owner of the premises, under the dramshop act, by the wife and child of an alleged confirmed drinker. The law creates a liability for selling to a known inebriate, a woman, a minor or a fool.

It is therefore quite apparent that the application of such a law in New York would quickly depopulate the four hundred and some others.

ABOUT THE PACIFIC SURETY.

The "Coast Review," of San Francisco, the leading insurance journal of the Slope, makes reference to the attack of the "Underwriters Report," another insurance paper, on the Pacific Surety Company and its principal officers, and also upon the California Insurance Commissioner, in this language:

A disesteemed local contemporary with one hand accepts an advertisement from a high-finance stock-selling life company organization and with the other hand writes an article denouncing a company which is offering additional stock to double its paid-up capital, but withdrew its advertisement from its critic.

Charges of rebating made by members of the Surety Agents' Association of St. Louis have resulted in a demand for an exact definition of the term "broker." Certain members were found guilty of offering to divide commissions, but motions to expel them were defeated. Each claimed that the person with whom he offered to divide commissions was a broker entitled to receive commissions, and an exact definition is now being sought.

The Oregon Surety and Casualty Company of Portland, Ore., has filed its articles of incorporation. Its capital stock is to be \$100,000 of a par value of \$100, and it is said that the same is fully subscribed. It is to write a general casualty and surety business.

There were over 1,700 fires in Wisconsin last year, of which nearly 700 were dwellings.

SUMMER VACATIONS CUR-TAILED.

On Monday the New York Legislature, by a practically unanimous vote, adopted the McInerney resolution calling for the appointment of a legislative committee to inquire into the affairs of all insurance companies doing business in the State, with the exception of life insurance companies.

The committee is to sit during the summer and report its findings with recommendations for remedial legislation to the legislature of 1911.

The assembly also adopted a resolution requesting the Attorney-General to proceed to enforce the law for the punishment of fire insurance officials who may be found guilty of violations of the statutes of the State.

Assemblymen Bennett and Dana opposed it on the ground that the Superintendent of Insurance was conducting a vigorous investigation of the fire insurance scandals and that he had all the authority necessary to make a full and searching inquiry.

The majority leader, Mr. Merritt, replied that a legislative committee could arm itself with authority that was not possessed under the law by the Superintendent of Insurance. The resolution was adopted by a vote of 126 to 4. The four who voted in the negative were Bennett, Bates, Dana and O'Connor.

From this it is quite evident that only the life people will have a care-free summer vacation. All the others will be on the anxious bench if the indications from the superintendent's investigation now going on afford any basis for prophecy. The elections are coming on and the politicians have to do some playing to the galleries.

ANNOUNCEMENT.

In view of the coming legislative examination of every insurance company (excepting life) doing business in New York State, whether home or foreign, referred to elsewhere in these columns, "The Chronicle" announces that it will specially feature the developments of the investigation as it progresses.

For this reason every man, woman and child, official, agent or worker, in anywise interested in, or connected with, insurance should subscribe for the issues covering the period of investigation, which will extend over several months.

As is well known, "The Chronicle" has maintained the attitude of a reviewer of events rather than that of a daily newspaper printing local news items, or, in other words, the magazine principle.

A file of "The Chronicle," covering

the period of investigation, will be especially valuable to all the fire, casualty and surety companies, their policyholders, agents and employes, not only in the United States, but also in Europe, Canada or other countries where they operate.

Now is the time to subscribe.

PRESS DAY TROUBLES.

There is trouble in the print shop
No language can express,
For Thursday's rolled around again,
The day we go to press.

The compositors are hustling fast,
Each has a dirty proof,
The make-up man is cussin'
In a way to raise the roof.

The devil pied a galley
Of solid nonpareil,
The foreman saying things to him
That makes the brimstone smell.

The stenographer is jawing about
The ink spot on her dress
Any gol-darned fool can tell
We're trying to go to press.

Everything is all "balled-up,"
The forms are in a mess,
And now the old man's asking
When we're going to press.

Through the room there rings aloud
A piercing hell-horn wail—
The office dog is yelping, cause
They've stepped upon his tail.

The pressman now is ready—but
The d—d old form won't "lift,"
So he whittles out a "dutchman"
And gives his quid a shift.

The forms are on the press at last,
The press is running great—
But we've got to take them off agin,
Forgot to change the date!

They're on again, the motor's down,
We're running swift and slick;
But the paper's on the roller now,
And you bet is there to stick.

The whole d—n bunch is mad as sin
And cussin', more or less,
For hell breaks loose on Thursday,
When the paper goes to press.

—Exchange.

PROMOTIONS.

Apropos of the promotion of insurance companies, so much in vogue for the past two or more years, comes a story that may be applicable. At least, it may be applicable to some eminent promoters who are at present energetically plying the art learned in an indifferent school of fortune.

In a certain Western region complaint was made to a cigar dealer that he must improve his brand or lose trade. He immediately made announcement that he had just received a consignment of the world-renowned "Gold-bug" cigars, and adding that "the tobacco from which the "Gold-bugs" are made is grown entirely in conservatories and the

cigars are made on mahogany tables by thoroughbred Cubans in swallow-tailed coats and white kid gloves.

When a man smokes one of these fine cigars he walks on air, and dreams that he has a diamond scarf-pin and a \$65 suit of clothes on and just married rich. It makes the breath sweet, keeps the teeth white, and will force a mustache on the smoothest lip in five weeks.

Herbert Marshall has been appointed superintendent of the personal accident department of the Casualty Company of America. Mr. Marshall has been with the Fidelity and Casualty for fifteen years, and was one of its most successful claim adjusters. He will have charge both of the underwriting and of the adjustments in his department, assisted by the well organized force at the home office and in the field now maintained by the company.

E. M. Linville, who has been located at the Philadelphia office of the London Guarantee and Accident for more than two years as special agent and adjuster for this field, and been with the company for about eight years, severs his connection with it tomorrow to become the Eastern Connecticut special agent of the Travelers for its liability department, with headquarters at Hartford.

The following have been nominated for the executive committee of the Chicago Board of Underwriters, to be voted on at the quarterly meeting next Thursday: L. E. Yager, of L. E. Yager & Co.; H. V. Burrows, of Starkweather & Shepley, and W. E. Higbie, of Fred S. James & Co.

R. G. Babbage, attorney, heads the list of some fourteen residents of New York who are advertising their intentions of organizing the Independent Surety Company, for the writing of all classes of casualty and surety business. The capital stock proposed to be \$500,000.

"The Chronicle" acknowledges receipt of the "Spectator's" invaluable 1910 "Pocket Index of Life Insurance," "Pocket Register of Accident Insurance" and "Handy Chart of Casualty, Surety and Miscellaneous Insurance Companies." These works are indispensable for reference purposes.

D. W. McCrea has been appointed New York city agent of the Federal Union Surety for all lines except excise bonds, which will be handled through the syndicate as heretofore.

INSURANCE COMPANY

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS	\$13,885,802.38
LIABILITIES	8,766,622.58
SURPLUS	\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income.	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of..... \$2,710,650
And increase of assets in the same time of..... 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,517.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the Company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

LOGARITHMS, SEVEN PLACES.
 Forborne Immediate Annuities.
 Curtate Summations of D Column.
 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
 For these purposes the "select and ultimate" will be most useful.

Hughes Stops All the Buncombe.

A Timely Message Demands General Investigation.

The rumor which has been going about for some days that Governor Hughes had made it plain in his address before the Newspaper Correspondents' Association at Albany that he was in favor of "taking the lid off" has been given most unexpected, but complete, confirmation by his special message sent to the legislature on April 11, accompanying a report by Superintendent Hotchkiss. The following is the special message:

To the Legislature: I place before you a report which has been made to me by the Superintendent of Insurance. While the superintendent is armed with power to examine witnesses and to compel the production of books and papers in proceedings within the scope of his departmental action, he has come upon certain suggestive facts apparently lying outside his official cognizance and of a character to be adequately dealt with only through means which your honorable body is competent to authorize.

A Thorough Investigation Imperative.

The revelations in the inquiry recently conducted by the Senate and the facts brought to light by the Superintendent of Insurance make it imperative that there should be a thorough investigation with respect to legislative processes and as to the corrupt practices which have been effectual in advancing or blocking legislation. It is not necessary for me to review these disclosures or to attempt to appraise their cumulative effect. It is sufficient to say that they have caused every honest citizen to tingle with shame and indignation and have made irresistible the demand that every proper means should be employed to purge and to purify.

It is the high privilege of the legislature, in the discharge of its obligations to itself and to the people of the State, to follow the salutary action already taken in its upper branch by appropriate steps for the exposure and destruction of combinations and conspiracies against the just use of the law making power and by providing suitable protection against the recurrence of such abuses. This is a prom-

ising opportunity to pursue the opening trails of corruption, to reveal illicit methods and agencies, to uncover the perfidious influences which have dishonored the State and thus to aid in securing the wholesale exercise of its beneficent authority.

"The Integrity of Legislative Procedure" in Question.

It is the unquestioned prerogative of the legislature to inquire into the course of legislation, the integrity of legislative procedure and the means by which its action has been procured or frustrated. In this there is no usurpation or confusion of function, but the proper safeguarding of the legislative power. The legislature is entitled to know how, wherein and by whom it has been deceived and its powers perverted.

New Legislation Should Be Suggested.

Important as will be the wholesome and corrective influence of publicity with respect to these matters the purpose and result of inquiry extend beyond the bounds of mere disclosure. We are far from perfection in legislative method. Nor have we exhausted available measures of protection against traffic in legislation and chicanery in dealing with bills. No subject deserves more thorough consideration to the end that the opportunities of those who are willing to buy legislative favor or to use representative powers for personal profit should be limited to the utmost degree. It may be impossible wholly to eradicate these evils, but to the extent that the nature of the illicit intercourse is understood and the methods and instrumentalities which have been successful are exposed there may be intelligent effort at remedial action through both statutes and legislative rules. The time is ripe, in my judgment, for a full and painstaking inquiry to expose the worst of public wrongs and to prepare the way for needed improvements in our laws and legislative processes.

Should Be "Immediate, Impartial, Thorough and Unsparring."

I therefore recommend an immediate, impartial, thorough and unsparring investigation into legislative practices and procedure, into the use of corrupt or improper means for the promotion or defeat of legislation,

such inquiry not to be limited to but suitably to embrace the matters adduced in the recent proceedings by the senate and those presented by the report herewith submitted of the Superintendent of Insurance, in order that, so far as evidence may be obtainable, the actual facts may be known, that there may be a full understanding of the methods and agencies employed in connection with legislative proposals and that well considered recommendations for appropriate remedies may be made.

CHARLES E. HUGHES.

A General Investigation of Corruption Inevitable.

This message, together with the report of Superintendent Hotchkiss, should have, and doubtless is expected to have, two important results, viz.: First, that provision be made at once for a thoroughgoing investigation of the entire subject of bribery and improper interference with legislation, entirely independent of insurance, although the same may, and doubtless will, involve the calling of some men connected with insurance companies who may be cognizant of blackmail or bribery; and, second, the retirement of all propositions for sidetracking the investigation into a mere attack upon fire insurance and casualty insurance companies under the guise of an investigation of evils, alleged to exist in those institutions.

Senator Cobb and Assemblyman Merritt, Republican leaders in the senate and assembly, have already indicated that just what the Governor asks for will be granted.

A perfectly general investigation of legislative misconduct is plainly indicated, and there will be no escape from making the same.

Hotchkiss Will Himself Investigate Insurance.

An investigation of those weaknesses in the laws relating to insurance other than life and in the practices of such insurance companies will

doubtless also be made under the supervision of the trained forces of the Insurance Department, in the ability, rectitude and unswerving fidelity to duty of the chief of which, the public has implicit confidence, second only to its confidence in the Governor himself. There is no doubt that such an investigation is needed; for the reason that it would surely not have been necessary for fire insurance companies to submit to be held up by blackmailers, had there not been legislation already on the statute books, with the weak points of which they were only too familiar, or legislation desired to cover weaknesses which they ought themselves to remedy.

What Are the Evils That Lay Them Open to Blackmail?

It will be remembered that outside of the monumental holdup in regard to the tax bill, presented at the instance of Governor Odell, the presence of the fire insurance companies and their money in Albany has been chiefly confined to an attempt to maintain the fire insurance reserve laws as they stood before the amendment in regard to reserves upon reinsurance, and to prevent interference with compacts. There never would have been an amendment of the reserve laws, as regards reserves on reinsurance, had the reserve laws themselves been in a proper state; and there would be nothing to fear from anti-compact legislation if the companies made their loss experience upon different classes of risks public, with the result that a proper basis for rates of premiums would be accessible, and so could even be made the standard for reserves, as is the ease in life insurance and health insurance.

It is the opinion of many competent observers that men, connected with fire insurance, will make a serious mistake which may quickly be costly to them and the interests which they are guarding, if they fail to do two things, viz.: First, to make use, as promptly as possible, of the existing opportunity to expose thoroughly the bribe-takers and blackmailers of the legislature, by telling the plain truth concerning Buckley and his holdup, giving the names which he doubtless mentioned to more than one; and, second, to make use of the present opportunity for remedying the condition in regard to a standard for reserves on fire insurance and branches of insurance other than life, which loudly cries for remedy, and, also, for combining and publishing data, upon which it will be possible to base staple rates and proper requirements for reserves, in such a manner that legis-

lative interference with compacts will cease to be a means by which money may be extorted from the fears of the managers of fire insurance companies, because the compacts will no more be necessary in order to sustain rates than in life insurance.

Superintendent Hotchkiss' Report.

The following is the text of Superintendent Hotchkiss' report, indicating the limitations which he encounters to make that thorough investigation of bribery and legislative corruption for which, undoubtedly, the situation loudly calls:

Sir: On March 18, 1910, a public investigation of the expenses of insurance companies from 1900 to 1910 inclusive, particularly in connection with legislation, was begun at the New York offices of this department. The testimony and exhibits therein, together with a formal report, will later be transmitted to you. The character of the facts developed and the nature of the difficulties encountered in conducting the investigation further seem to make it proper that I at this time lay before you the following summary:

An examination of the Phenix Insurance Company of Brooklyn, begun last October, brought to light a mass of correspondence seeming to disclose an intimate relation between the president of that company and legislation affecting fire insurance companies during the last decade. The material thus revealed suggested an examination of the books and records of several other companies, and in January of this year such an examination was ordered. This examination showed that very considerable sums of money had been paid by a large number of domestic fire insurance companies and disbursed by and through the president of the Phenix company in promoting or retarding legislation.

Investigating Expenses of Legislation.

The facts thus developed formed a basis for further inquiry, with the result that on March 18 a public investigation under the authority conferred by section 39 of the insurance law was commenced. Inasmuch as the expenses of life insurance companies in connection with legislation had been quite generally developed by the legislative investigation of 1905 it was not thought either expedient or necessary to devote much time to an inquiry into the disbursements of companies of this character. Indeed with possibly a few exceptions, only such facts as showed disbursements by life companies which were not brought out in 1905 form a part of the record of this investigation.

The Net Result So Far.

The result of the investigation thus far warrants the following statements:

1. Legislative expenditures in New York by insurance companies authorized to do business in this State were particularly conspicuous in the years 1901, 1903, 1904, 1905, 1906 and 1909, and notably significant in two or three of such years.

2. These disbursements were made

(a) by individual companies, in connection with legislation affecting such companies, (b) by syndicates of companies, apparently willing to do the work for all, and (c) by the New York Board of Fire Underwriters, a corporation supported by annual assessments on practically all of the companies doing business in New York, such assessments being based on premium income, and whose committee on laws and legislation is by its by-laws charged with the responsibility of watching over legislative affairs.

3. The moneys so paid were disbursed for (a) traveling expenses of individuals and delegations, (b) annual and special retainers of regular counsel, (c) so-called retainers of legislative lawyers, (d) contributions to political committees, (e) gifts or payments to men of political prominence and influence and (f) entertaining legislators and others at times in a somewhat lavish manner. The aggregate of disbursements of this character, as the record now stands—such disbursements being largely from the treasuries of fire insurance companies—approximates and probably exceeds \$150,000.

4. The disbursements for travelling expenses and to counsel for services in the preparation of briefs and the presentation of arguments to legislative committees are doubtless legitimate. It has not, however, yet been possible to examine into certain large disbursements of this kind made from 1901 to 1906 inclusive to regular counsel resident in New York city. The size, frequency and limited distribution of payments to so-called lawyers and legislative agents resident in Albany are suspicious and seem to call for further inquiry through an investigation of broader range than is possible under section 39 of the insurance law. Particularly is this true of a fund of \$10,000 raised by four companies in 1903, a fund of \$15,000 raised and disbursed in 1904, and funds of \$5,000 each disbursed in 1905 and 1909 respectively. A disbursement of \$8,311.98 by the New York Board of Fire Underwriters in 1901 and an auxiliary fund of \$5,000 raised by certain of the companies contributory to that board in the same year have been largely accounted for.

The facts developed as to these various funds prove that some of the moneys went to the Republican State Committee in recognition of the interest of certain members of such committee at the time various bills were passed; some to prominent politicians; some to past members of the legislature, supposedly of influence, and a

large portion to a legislative agent formerly connected with the Insurance Department of the State of New York, whose disbursements of such funds are sufficiently characterized in his own correspondence, but whose memory seems lapsed, whose books are apparently non-existent and an inspection of whose bank account has been denied. Numerous items of proof, however, warrant the inference that some of the moneys thus disbursed went further than the persons to whom they were paid by the representative of the insurance interests.

5. Several witnesses offered proof of direct propositions made by so-called lobbyists looking to the payment of money to such persons, that it might be by them distributed among members of past legislatures.

6. Instances of the attempted collection of funds for the purpose of contributing to the campaigns of legislative candidates were also developed.

7. Much was also elicited as to so-called "strike" bills, and the log rolling of such bills in and out of committees, responsive to the influence of lobbyists and legislative agents, often apparently that they might either prove their usefulness or exact larger contributions from their dupes.

8. Similarly numerous instances evidencing the holding up of meritorious bills and the threatened passage of bad bills until the desired consideration reached the bank accounts of the middle men were also developed.

Bill Killing and Law Getting for Pay.

In short, while absolute proof showing the transit of money from the bank account of an insurance company into the hands or the bank account of a legislator is lacking, the record of the investigation as thus far made up warrants the statement that during the last decade, particularly in the first five years of such decade, a system of bill killing and law getting has existed which is a reproach to the people of the State. That such system existed prior to 1900 is also apparent from the facts developed in the investigation.

During the progress of the investigation the chief witness frequently refused to answer questions, thereby making himself liable for contempt under section 61 of the public officers law. He also served a notice upon his principal bank of deposit, the result of which was that such bank declined to produce a transcript of his account, which it had been subpoenaed to produce. It was not thought essential to the development of the facts that the investigation proper be halted to compel the answering of questions and the production of books. Nor is it doubted that, under existing law, such testimony and production can be compelled.

A difficulty, apparently insuperable, has, however, developed. The books of the Phenix Insurance Company showed that while the chief witness in this investigation was a member of the Insurance Department of this State such company had loaned him \$13,000 on the collateral of 100 shares of the International Banking and Trust Company. The latter company was the successor in interest of the American Bond and Mortgage Guarantee Company, to which a special charter, giving extraordinary powers—some of them of an insurance nature—had been voted by the legislature of 1900. In-

quiry into this transaction suggested the importance of a careful investigation of the books of certain financial institutions now out of business, to the end that the circumstances surrounding the acquisition of portions of such stock by this witness and others might be spread upon the record. Again, a notice was served which in effect prevented an examination of such books, and further progress along this line was thus, for the time, blocked. The testimony of a volunteer witness, however, threw a strong light upon the methods followed by those who sought special charters, with wide corporate powers, from the legislatures of several years ago.

Further Disclosures Blocked by Narrow Limits of Power.

Likewise, further inquiry into certain facts—developed as the result of a suggestion made by the counsel of former Senator Conger—seems to be not only effectively blocked but also probably improper. Ellingwood & Cunningham were from 1900 to about March, 1905, a stock brokerage house, operating in New York. A petition in bankruptcy was filed against them, and a settlement made with their creditors. Their books, papers and records, however, remained in the possession of James W. Cunningham, one of the members of the firm. For about five years prior to the failure of this firm one G. Tracy Rogers—who at that time seems to have been the legislative representative at Albany of the traction interests—was a special partner of the firm.

The Cunningham Objections Call for Wider Investigation.

A subpoena served upon Mr. Cunningham resulted in his placing in the possession of the Superintendent of Insurance three large loose leaf ledgers, covering the transactions of this firm from 1900 to March, 1905, inclusive. He also gave information as to the existence and character of the other books, papers and records of such firm, and promised to make the same available. An examination of such ledgers developed the existence therein of accounts with several former members of the legislature, some of whom had been active on the insurance and rules committees. Mr. Cunningham was therefore asked to take the stand and give evidence tend-

MASSACHUSETTS MUTUAL LIFE INSURANCE COMPANY,
Springfield, Mass.

Incorporated 1851

HOTCHKISS RECOVERS THE \$150,000 BOODLE.

The parties who had obtained possession of \$150,000 of the surplus funds of the People's Mutual Life Association of Syracuse, when its "control" was being transferred to John Tevis and his Canadian associates, have refunded the sum, under pressure from the Superintendent of Insurance, who took possession of the association promptly under section 63 of the insurance laws. In consequence of this, the civil suits against them and also against the directors of the association have been abandoned, as also have the efforts which they were putting forth to cause the decision of the Supreme Court, confirming the taking possession by the Insurance Department, to be reversed.

It is reported that Lieutenant-Governor White and other directors of the First National Bank of Syracuse put up a large part of this sum and that the bank is to sue the Canadian bank on its \$150,000 certificate of deposit.

It is supposed that the special action brought in the name of certain policyholders and members, by William Hepburn Russell, is included. These policyholders claim that, as the institution was solvent and it was, therefore, not unsafe for it to continue in business, the taking possession was a violation of the constitutional rights of the members. The Appellate Division of the Supreme Court of that department—one Judge being absent—was evenly divided upon this question, and it was consequently referred to the Fifth Department, which now has it under consideration.

WHEN GREEK MEETS GREEK.

Julius Bohm arrived in Chicago recently. The announcement of his coming created considerable interest in life insurance circles. In days gone by Mr. Bohm was a large figure in the business in New York. About the same time Dr. Pearman was operating in Chicago. The two are said to have been somewhat similar in their methods and one is said to have made about as much noise as the other, and that was enough, and then some. At any rate, Dr. Pearman was swift enough for Chicago, and, as the two have been mentioned as being in the same class, there has been a tendency among life insurance men in the Windy City to hold their breath and see what was going to drop.

Last year, out in California and adjacent States, Mr. Bohm produced more than half the entire new business of the Columbian National. This fact gives reasonable assurance that as manager of the State Life in Chi-

cago he will not let the grass grow under his feet. The State Life is a progressive company, untrammelled by the laws of New York, and with an energetic manager it is likely to do business in Chicago.

It is understood that most of the "highbinders" in the business have made it convenient to call upon Mr. Bohm since his arrival. However, this is not a mark of distinction, as they show every new manager that courtesy.

PRUDENTIAL PROTESTS.

The suit to have the Court of Chancery of New Jersey interfere with the plan of the Prudential Insurance Company of America to divide among certain classes of its policyholders \$16,000,000 of the company's surplus reached final hearing before Vice-Chancellor Howell at Newark, N. J., Monday.

When the case was called former Attorney General Robert H. McCarter and John R. Harding, representing Leon F. Blanchard, the complainant, announced that other stockholders holding 8,700 of the 40,000 shares outstanding wished to join with the original complainant. They were permitted to do so.

The fund that the objectors seek to prevent being diverted for distribution is that which the company has set aside, by action of its directors, for the benefit of participating policyholders. The complainants claim that this \$16,000,000 belongs, not to the policyholders, but to the stockholders, and they aver that it is the duty of the company, if the surplus is to be distributed at all, to apportion it among the stockholders.

The bill of the complainants further declares that more than \$7,000,000 has been already paid by the company to policyholders without warrant of law.

Among the charges of the objecting stockholders are allegations that the company pays its officers extravagant salaries, and has fitted up its offices at greater expense than necessary.

THE N. A. L. U.

The mid-year meeting of the National Association of Life Underwriters was held at the Hotel Astor, in this city, last Friday. Twenty-five members were in attendance and the session was one of the most interesting the committee has ever held.

The following topics were selected for discussion at the annual convention meeting of the association:

"How to Improve Our Service to Policyholders."

"How to Obtain and Hold Agents Under Present Conditions."

"How Best to Overcome the Difficulty in Securing Agencies."

"Has the Work Special Dignity?"

"Is Not the Percentage of Successes Greater in Life Insurance Than Any Other Lines?"

The topic for the prize essay is:

"The Appeal That Persuades in Soliciting."

Charles Jerome Edwards, chairman of the publication committee, gave evidence of excellent financial condition of the "Life Association News," and showed, also, for the first time in the history of the association, that a substantial profit would accrue from the publication of official proceedings of the convention.

William C. Johnson, chairman of the committee on law and legislation, talked briefly on the subjects that had been considered by the committee, particularly insurance legislation in the State of New York.

Third Vice-President E. R. Machum, president of the Life Underwriters Association of Canada, gave a synopsis of general conditions in Canada and directed attention to the insurance bill in Canada. He said it was the finest insurance bill ever placed on the statute books of any country in the world.

It seems practically settled that the next convention of the association will be held September 7-10 at Detroit. The Canadian association will meet at Toronto on September 5, and this enables the two to practically unite in a joint convention.

I notice that a number of agents are making changes from the Companies they were formerly with to other Companies. Also, that none of these agents have been in correspondence with the Philadelphia Life. Perhaps it is due to the fact that they do not read our advertisements, and I think that it would pay the agents, whether they are working for this company or not, to read these advertisements, as many a time there appear in the advertisements little arguments that would help them to secure business. For instances:—How many agents to-day are using the argument that they are insuring income, which is really what you do on every policy that you have caused to be issued by a Life Insurance Company? Now why don't you get in touch with the new up-to-date income policy of the Philadelphia Life that is different in all details from that issued by any other Life Insurance Company? Write Perry to-day.

HUGHES STOPS ALL THE BUNCOMBE.

(Continued from Page 3.)

ing to develop whether any of the transactions with such members had to do with moneys disbursed by insurance companies. His examination at once made it very doubtful whether further inquiry could properly be made under section 39 of the insurance law.

The accounts referred to, however, together with the testimony of the witness Cunningham—both read in connection with the accounts on such books of G. Tracy Rogers and others associated with him—warrant a strong suspicion that such books, to an extent at least, had been a clearing house for financial transactions connected with legislation during the period mentioned.

Thus far thirteen accounts have been examined, nine of which appear to have been with those who were members of the legislature at the time and four with persons prominently associated with legislative affairs or in the same coterie of political influence. Several other accounts, particularly those of G. Tracy Rogers and of syndicates or partnerships of which he was a member, have also been found in such books.

The Disclosures of the Accounts.

Among the significant facts disclosed in the thirteen accounts just mentioned are the following:

1. Several of the accounts either have their origin or become active near the close of the legislative sessions of 1900 or 1901.

2. Some of such accounts show credits of cash in considerable amount at about the time the legislatures of those years adjourned.

3. In some instances these credits show that they resulted from a cash or a check payment by G. Tracy Rogers or through a transfer from his account.

4. In two or three of the accounts credits of cash, sometimes from or through the account of G. Tracy Rogers, were offset almost immediately by cash withdrawals.

5. Some of the accounts show purchases and short sales, evidencing the possession by the person interested of inside information as to prospective operations through manipulations in Wall Street.

6. In one account numerous unexplained entries were made, showing withdrawals by one of the persons mentioned at a time when he was a heavy debtor of the firm.

7. In a considerable number of accounts appear transactions in stock indicated by the word "Trans," which seems to mean the stock of either the New York Transportation Company or the New York Electric Vehicle Transportation Company, two corporations at that time closely allied and ultimately merged under the name of the former. By chapter 657 of the laws of 1900 it became possible for the first mentioned company greatly to extend its franchise in the City of New York. Coincident with the passage of this bill several of the persons whose names appear in these books seem to have acquired blocks of this stock. The books do not furnish com-

plete information as to such acquisition, but the significance of some of the dates—they being almost coincident with the final action taken by the legislature on the bill which ultimately became chapter 657—is notable. Equally notable is the fact that when several of these blocks were sold by this brokerage house in 1901 the price realized seems to have been more than double the market price of such stocks at that time.

There are also minor peculiarities about these accounts which suggest investigation, as for instance: (a) In several accounts the absence of cash or margin credits at times of purchases; (b) in one of the accounts the rebating of a considerable sum of interest, and (c) the apparent fact that some of the accounts show large debit balances at the time of the failure of the brokerage house but seem not to have since been pressed for payment.

Certain of the accounts in these ledgers show a close connection between G. Tracy Rogers and the Metropolitan traction interests in New York city. The character of the securities dealt in frequently recalls legislation urged or retarded at about the same time.

In short, these books, together with the memoranda, check stub books, checks and correspondence of this firm seem to call for further investigation and inquiry. When an effort was made so to do objection thereto was raised by an attorney who had not previously been the counsel of the witness and who declined to be sworn when an attempt was made to ascertain his connection, if any, with interests represented by G. Tracy Rogers.

It is not apparent that the Superintendent of Insurance as such has power under section 39 to proceed further with this phase of the pending investigation. For that reason the facts thus far developed and the books and the papers now in my possession are thus laid before you. Respectfully submitted,

WILLIAM H. HOTCHKISS,
Superintendent of Insurance.

M. Seligman, formerly superintendent of the industrial department of the Pittsburg office of the Atlantic Casualty Company, has become connected with the Imperial Assurance Company in the same capacity.

FIELDS OF CLOVER.

Albert T. Clover, large producer of life insurance and prolific author of "business" articles in magazines, is now manager of the Indianapolis Life at Chicago. Mr. Clover's last life insurance connection was with the Western Life Indemnity of Chicago. He wrote a couple of millions or so for that company and incidentally got proxies which came very close to overthrowing the administration of the company. While his services as a writer were highly appreciated, his other activity was not, and as his party was not victorious he naturally was looking for another place.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

HEARING ON WORKMEN'S COMPENSATION.

On Wednesday of this week a hearing was held at Albany upon the bills providing for workmen's compensation and the amendments of the employers' liability laws of New York which were introduced by the Wainwright Commission.

There were in attendance, in addition to many representatives of employers, employers' associations and workingmen's associations, officers, attorneys or other representatives of most of the companies engaged in the employers' liability insurance business in the State of New York. The sentiment among these insurance companies is distinctly favorable on the whole. It offers to them an opportunity for covering the hazard by insurance, and although the laws are a very considerable departure in principle from the present employers' liability statutes, the changes are not so extreme as to render the making of rates in the setting up of ample reserves, a matter puzzling in the highest degree.

On the contrary, it is believed that the employers' liability insurance companies, by reason of a special investigation of their experience under workmen's collective policies can and will present tables of rates and policy forms for the purpose of covering the liability under the proposed statute, without delay, and will be quite prepared to assume the burdens under this legislation.

HARTFORD LIFE RUMORS.

For some days it has been quietly talked on the curb that a controlling stock interest in the Hartford Life had been acquired by a new element, and that a reorganization would promptly follow.

The company was formed in 1866 and has \$500,000 capital. From 1880 to 1898 it confined its operations to its "safety fund" branch; in 1899 it resumed the old-line plan.

Its latest statement showed total net assets of \$4,739,541.14. Net surplus was \$515,164.73.

The company's income in 1909 was \$2,515,008.70. Its total disbursements were \$2,253,067.82. The excess of receipts over disbursements was \$261,940.88.

Increase in issued business in 1909 was 45 per cent. Increase in new premium income was 72.1 per cent.

The amount paid to beneficiaries in 1909 was \$1,650,000, distributed among fifty States, Territories and foreign countries.

Its present officers are: George E. Keeney, president; Raymond G. Keeney, vice-president; Louis E. Gordon, second vice-president; Thomas F. Lawrence, secretary; Robert L. Rowley, medical director; Alva C. Washburne, actuary; Edmund R. Ward, superintendent of agencies.

WESSELS OUT OF COURT.

The suit of E. J. Wessels against John I. D. Bristol, general agent of the Northwestern Mutual Life Insurance Company for Greater New York, has been dismissed by Supreme Court Justice Guy, in an opinion embracing findings of fact and conclusions of law filed on April 6.

Wessels sued for commissions on the basis that his resignation, which had been duly filed with General Agent Bristol was not intended to be a genuine resignation at all, but only a colorable one for the purpose of enabling Wessels to undergo an examination in supplementary proceedings or something of the sort, he intending to resume the employment without any real break.

The court held that the contrary was voluntarily terminated by Wessels and that under its terms he thereby forfeited all rights and claims against the company, excepting as to first year's commissions upon deferred semi-annual and quarterly payments.

HURRAH FOR EDWARDS.

The presence of Charles Jerome Edwards, ex-president of the National Association of Life Underwriters, among the directors of a reorganized Brooklyn bank, who bravely confronted the situation last week when two reorganized banks of Brooklyn closed their doors, by pledging their entire resources to reassure the depositors, has attracted much favorable attention.

It is suspected also that it may not have been a case merely of "me too," since it would be just like a good life insurance man to think of doing such a thing.

PRESIDENTS' ASSOCIATION BILLS.

At the request of Hon. Robert Lynn Cox, counsel for the Association of Life Insurance Presidents, Senator Grattan, of Albany, has introduced three bills, one extending the time within which New York life insurance companies may dispose of stocks, for five years, that is, until 1917 instead of 1912; one making the unit for computing the surrender charge \$2.50 per \$1,000 of insurance, instead of \$25 per \$1,000 of insurance; and one permit-

ting life insurance companies to specify which form of surrender values shall be given automatically instead of requiring the same to be extended insurance, as per the present law. The last mentioned amendment also provides that the insurance, taking effect after lapse, shall be non-participating and shall not carry with it the right to a cash loan.

A PROMOTING COMPANY SOAKED.

Supreme Court Justice Gerard, of New York, holds, in a decision rendered April 13, that the Real Estate Owners Fire Insurance Company is entitled to recover \$10,900 with interest from the Real Estate Owners Underwriting Company, a concern which was organized for the purpose of disposing of stock for the fire insurance company, paying its preliminary expenses, etc.

Relying upon this contract the fire insurance company paid its president \$7,300 for services and paid other expenses of \$2,556. The promoting company failed both to sell the stock and also to pay the expenses as per its agreement.

N. R. Ansado, an insurance broker, 65 years of age, doing business at 24 Stone street, was found dead in his office at 2 o'clock yesterday afternoon. He was married and resided at Roselle Park, N. J. According to tenants in the building who had seen him in the morning, he was in good health and spirits, and his death was attributed to heart disease.

Isaac Remsen Lane, who was for ten years president of the Hanover Fire Insurance Company of New York, died on Tuesday at his home in Orange, N. J. Mr. Lane was 69 years old and a veteran of the Civil War. He had spent all of his business life in fire insurance. For the last ten years he had been an insurance broker.

JUST A CLIPPING.

Last Thursday night at Albany Governor Hughes was the guest of honor at the annual dinner of the Press Correspondents Club, and from the press accounts is extracted the following as indicative of what, from the Hotchkiss insurance inquiry of legislative graft thus far, it is fair to assume is the complexion of the New York Legislature, now striving so diligently to divert public attention from itself.

The occasion was a social one, and gridironing a la Washington was presumably in order. But it was not a public function and the club—as all reputable clubs do—expected that gentlemen only were present. But the after reports leave the point in doubt.

This is what comes from behind the curtains. Mr. Barnes is the Republican leader at Albany. He is an eminent statesman when it comes to considering insurance and all other legislation. Follow his line of thought, as reported by "The Times":

Mr. Barnes, of New York.

Mr. Barnes preceded Gov. Hughes. The climax of his remarks came at the end of his speech, when he told an anecdote from the 1908 campaign.

"One of my leaders," said Mr. Barnes, "the head of an election district where, ordinarily, there have been about fifty Republican votes, gave me a better insight of the Governor's vaunted popularity with the voters that we hear so much about. He is a very competent man for the place he holds.

"This leader came to me after the polls had closed on election day, twirling a big black cigar, which was tipped at a dazzling angle, between his lips. He threw down a piece of paper on the desk in front of me with some show of vexation. It was the report of results in his election district. I glanced at it and then looked at the man. Hughes had got twenty votes where the ordinary Republican candidate would get fifteen.

"How the — did you do it?" I asked, looking at the man in surprise. What do you think he answered?

"I told them that they were voting for me; it was for me they did it, not for that blankety blankety blank Hughes."

The Barnes anecdote was told with mimicry to match. It was received in silence by the diners. The Governor listened to it without any show of vexation. In fact, the Governor was smilingly, sometimes boyishly, happy while the dinner was in progress. It was not until he began to speak that the smile gave way to an expression of earnestness and determination.

Mr. Barnes made his speech with his back turned to the Governor most of the time, and facing the huge black flag, grimly adorned with the skull and crossbones of pirate lore, which was festooned on the wall of the banquet hall. Above it appeared as a wall motto one of the choicest of the recent utterances of Mr. Barnes, which he made as he returned from

the funeral of the late United States Senator Thomas C. Platt:

"It is better to nail the black flag to the masthead than to hoist the white flag of surrender."

Governor Hughes, of New York, Responds.

"I am not forgetful of the great honor that was bestowed on me by the people of this State, in confiding to me this trust," said Governor Hughes, in his address, "but nothing in the world could impel me to go through what I have gone through during the last four years."

By this time every one was ears. Mr. Barnes sat with a sneer on his face as the Governor referred to the tribulations of the four years' warfare carried on against him by the bosses of his own party. This sneer went and came throughout the Governor's speech. Nearly all the time Mr. Barnes turned his back on the speaker.

Then came a part of the Governor's speech which for vehemence and force has never been equaled by him in any of his public utterances. It was admitted freely by all who heard that if the speech could have been printed verbatim for general reading throughout the State it would have tended to array such a public sentiment in favor of that broad general housecleaning which the Governor advocates and the bosses in and out of the legislature are trying to defeat at the present time the legislature would be compelled to heed his desires.

"Rip the Cover Off."

"You know," he said at one time, "that for years we have not had decent government in this State, but government that has been disreputable and indecent. I am convinced that the time has come when this must stop. The people are aroused. They will stand for nothing less than honesty and fair dealing in the public service. Rip the cover off. Let in the light. Get the crooks out of the State departments. For years votes have been shamelessly bought and sold at the Capitol. Send one of the bribe takers properly branded through the State, so that he may be scorned by all honest men, and it will have an inestimable effect for the good and wholesome things in the service of the State and of the people."

The Governor has never spoken with more determination than he did on this occasion.

The tremendous sensation aroused by the Governor's remarks was not altogether due to their tenor, but in a large degree to the manner in which they were delivered, with emphasis, the almost overpowering force of his delivery, and the environment. On all sides were men who occupied places of influence in the legislature and the Republican organization. The Governor virtually hurled his anathema in their faces.

After the dinner the Governor's speech was vehemently denounced by leaders affiliated with the opposition, and there were heard threats that retaliation would follow his attack on the system which has been in vogue at the Capitol so long.

IN NEW ENGLAND

SMOKE TALK TO-MORROW.

Clarence C. Miller, the energetic secretary of the Boston Life Underwriters' Association, announces an innovation in the shape of a smoke talk, to take place at Young's Hotel, tomorrow, Friday afternoon, from 3 to 5 o'clock. An opportunity will be afforded the members of the association on this occasion to meet John W. Whittington, president of the National Association of Life Underwriters. The subject of business and partnership insurance is to be discussed in open meeting, and all who attend are bound to receive a good time and the benefit of a new inspiration for carrying on their work in the field. This, the first smoke talk of the association, ought to be made, and doubtless will be made a howling success.

Ide & Sewall's Accident Branch.

Ide & Sewall, who conduct a flourishing fire insurance general agency at Boston, has now added an accident department to the same, in consequence of their appointment by the North American Accident Insurance Company of Chicago as its general agents for Maine, New Hampshire, Vermont and Massachusetts. The firm has appointed Walter S. Ingraham, an experienced casualty underwriter, to supervise the accident branch of its business. In order to secure proper accommodations for the growth of their office Ide & Sewall will move to spacious quarters in rooms 510-516 Oliver Building as soon before May 1 as possible.

New Hampshire Fire Celebrates Fortieth Year.

The first policy issued by the New Hampshire Fire Insurance Company was made out on April 6, 1870, and Wednesday of last week marked the fortieth anniversary of that event, which was duly celebrated by President Sargeant and his office staff with a dinner at the Derryfield Club in the evening. The current issue of "Whittlings," the bright publication of the company, devotes two pages to a succinct history of its career, illustrated with portraits of all its presidents, namely, ex-Governor Ezekiel A. Straw, president from 1870 to 1880; ex-Governor James A. Weston, president from 1880 to 1895; John C. French, president from 1895 to 1900; Uberto C. Crosby, president from 1900 to 1905, and Frank W. Sargeant, the present chief executive

of the "Sound, Solid and Successful." The formation of the company was due to the efforts of Mr. French, and, as "Whittling" justly remarks "it remains a monument to the zeal and genius of its founder." It is truly a wonderful development on substantial lines that the history of the New Hampshire Fire covers, beginning with premium receipts of \$40,000 in 1870, and swelling to \$2,150,000 in 1909, facing usual and unusual losses and conflagrations with equal readiness and ability to meet all its just obligations, and, therefore, deservedly receiving the confidence and patronage of the community at large.

Review Asked For.

Proceedings have been brought in the Supreme Court of Massachusetts by the Metropolitan Life Insurance Company for a review of the decision of Insurance Commissioner Hardison that the company may not under the law issue a policy providing for payment of double its face if death occurs by accident. The company contends that the combination, being merely an extension of the terms of an ordinary life policy, comes within the scope of the law. The order of notice is returnable on May 2.

An Open Question.

On Monday a number of leading members of the Boston Board of Fire Underwriters called upon Mayor Fitzgerald, in their individual capacity (not as a committee of the board) to urge the reappointment of General Parker, whose term expires May 1. The Mayor received the callers politely, but intimated his displeasure at what he considered to be the coercive nature of movements undertaking to influence him in the matter of the fire commissionership. The Mayor said that he would not appoint former Commissioner Wells, at the same time remarking that some of the good deeds credited to the Parker administration had been put into motion during Wells' incumbency. So the question of who will be fire commissioner for the coming term is still an open one, but bound to be closed before many days pass by.

New England Brevities.

The entry into Massachusetts of the Standard Fire of Hartford, capital \$500,000, surplus the the same, was about the slickest thing on record. Applied Monday morning; admitted Monday afternoon; Elmer E. Lord & Co., agents for Boston and vicinity.

"Horace," prince of waiters, and for the past fifty years employed at Young's Hotel, Boston, died last

Thursday at a very advanced age. Horace was in a sense the *genius loci* of the Boston Life Underwriters' Association, having been in charge of its dinners from the first, and on terms of respectful familiarity with the superb leaders of its early days, men like Major Ben S. Calef, Colonel George N. Carpenter, Dr. E. N. Whittier, James T. Phelps and many others, all, alas! also passed to the silent majority.

The Merchants' Fire Insurance Corporation of New York was admitted to Massachusetts Tuesday morning. Crain, Jones and Bixby are appointed agents for Boston.

H. A. Murphy, of Portland, Me., has been appointed special agent for the New England & London Insurance in association with Clayton K. Brooks.

E. C. Brush, manager for the New England & Pennsylvania Fire, returned from a European tour last Thursday on the *Ivernia*.

FEDERAL LIFE APPOINTMENT.

The Federal Life Insurance Company has promoted O. M. Helfrich, formerly superintendent of agents, southwestern department, with headquarters in the Bryant building, Kansas City, Mo., to be agency superintendent, with headquarters at the home office of the company, Marquette building, Chicago, Ill.

AGENCY VS. SALARIED MAN- AGER.

The National Association of Local Fire Insurance Agents and the agents in the smaller towns are not the only ones who are giving serious thought to the inroads of the large city brokers. In the West the situation in this regard is different from that in New York in one important respect. In the East the men who are capturing big lines all over the country are brokers, recognized as such by the companies. In the West they are for the most part agents in large cities, but outside their operations are those of brokers. A manager called attention to the fact recently that in their outside business they are representing the assured and his interests entirely. The companies are satisfied to have them secure improvements in risks which bring about lower rates, but when they get up forms entirely favorable to the assured and often against the interests of the companies the case is different.

One thoughtful manager expresses doubt as to where the whole matter is to end. His company, for example, has an agency plant which presumably would be set down as worth fully a million dollars. It has been the work of many years to build it up and season it to its present perfection. Its small town agents, like those of other companies, are losing many of their largest risks, perhaps getting back a portion of them at a reduced rate, a 5 or 7½ per cent. commission, and with forms which the company hesitates to accept. Yet the agent and the company must take the business under these conditions or lose it entirely. The hardship falls heaviest on the agents, but it is no trilling matter for the companies to have the business coming to them through shrewd men who are looking out strictly for the interests of the assured instead of through agents who regard the company's rights also and are under some semblance of control by the companies.

To Be or Not To Be?

There is grave doubt in the minds of some students of the situation if this is not the beginning of the break up of the American agency system and the substitution for it of a system of salaried managers at important points, perhaps dealing directly with the assured, and representing a group of companies issuing a combined policy.

The similarity of this plan in some respects to the present syndicates, like the Western Factory Insurance Association, naturally calls attention

to the effectiveness of such a system. Through it companies have been able to compete with the factory mutuals, while they could not have done so with any such success if they had attempted to handle this sprinklered business through the ordinary channels.

An Impending Peril.

The need of some features of the syndicate plan is felt more now than formerly. It has been pointed out that patents are expiring on some important equipments, such as sprinkler heads, and there is danger of the market being supplied with cheap, low grade goods that will need constant watching even more than the present approved devices do. This work of supervision must be done at the minimum of expense if the stock companies are to meet the competition of mutuals and inter-insurers and this can be done only through joint inspections for several companies.

NO CAUSE FOR FEAR.

The conviction is becoming strongly fixed in the West that the days of the riotous excess commission in fire insurance are drawing to their close. Whether the committee of insurance commissioners, after investigating this question, shall make a report which will result in action or not, conservative managers express the opinion that something will start the legislative mill grinding on this subject.

Everybody knows what the effect of the Armstrong investigation was on life insurance commissions. Fire insurance may not have an Armstrong to deal with, but it has a Hotchkiss and the effect on commissions is likely to be similar, especially as most of the best companies admit that the present commissions paid by some companies, and at some points, are an imposition on the public.

It is with hopefulness rather than dread that Western managers talk

about the expected legislation on this question. Individually they cannot control the situation. The one important organization in the West cannot handle it. Co-operation between affiliated and non-affiliated companies failed to produce results in Chicago at a time following the San Francisco fire, which appeared most opportune. The commission question is evidently too much for the companies, so they look for the strong arm of the State to help them out. The thoughtful element are sitting steady in the boat and not rocking it.

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of Interests of all members.

NO PANIC.

The exodus of fire and casualty insurance company presidents to Europe for their "health" and summer vacation has no significance with reference to the insurance department's investigation now going on and the legislative investigation proposed, as referred to on another page. These gentlemen have other reasons for getting away, if their statements are accepted.

It is not unusual for passengers on a stage coach who have been held up at the point of a pistol and "your money or your life" command, to have an attack of nervous prostration afterward that requires a good long quiescence for the restoration of normality.

With the single probable exception, so emphasized by Superintendent Hotchkiss this week, it is safe to assert in equally emphatic terms that no insurance company of any class has given up a penny to the grafters at Albany that was not either of the stage coach order of hold-up or to checkmate a "strike" bill by a counter measure.

The recent revelations are a pitiful commentary on the sanctity of public office as a public trust that has been brought to light, not only at Albany, but all over the country.

The revelations now coming up daily from the New York State insurance investigation and from investigations going on in Pittsburg and other points throughout the Union show how widely the graft microbe has spread over this fair land. Even the humblest hamlet has not escaped it. So prevalent has it become that even the word "graft," is now divided into various shades of meaning, and with various applications. The common thief of former days acquires some measure of uplift by being classified as a grafter. On the other hand, the term is applied indiscriminately to the tipping of waiters, barbers and servants, and thereby loses force.

But the situation at Albany and at Tammany Hall in this city is the Simon pure graft article, and the victims in insurance circles have been unwilling and rebellious ones. They have been the favorite target for every vicious element in human nature and now is their time for a well-earned rest.

There is one feature of the pathetic picture presented in this Albany graft business that is laughable. "Willie" Buckley, that eminent collector, now in the records as about the limit to date in grafting, appears as having scared large sums of money from both sides of a pending strike bill

at Albany and simply "salting" it away. He did a very fine business and is reputed to own real estate holdings that render him independent and practically immune from attack. Wise "Willie." He did not waste away. He did a very fine business at \$500 per when a little hot air promises would suffice. Great Senators! When "Willie" offered six of them to President Kingsley, of the New York Life, at \$500 each, he evidently overvalued them, inasmuch as the \$500 per would have gone into "Willie's" pocket and the Senators probably received only a 10 cent drink or sandwich and a lot of hot air promises.

Vermin! It is up to Governor Hughes and Insurance Commissioner Hotchkiss to rid the State of these legislative vermin that have polluted and defiled decent interests and avoid the otherwise inevitable invocation of lynch law.

FIRE WASTE AND CREDITS.

Franklin H. Wentworth, secretary of the National Fire Protection Association, was the guest of the Toledo, O., credit men at their annual dinner last Thursday and spoke upon the relation of credit to the fire waste.

"Credit resources," said Mr. Wentworth, "are things that have made your elaborate systems of credit a necessity. The production and exchange of commodities as carried on to-day would be hopelessly wrecked, and widespread deprivation would follow any attempt to handle our gigantic interstate commerce upon a cash basis. We have far outgrown our monetary system and all attempts of Congress to adjust it to the shifting needs of our immense areas of activity serve only to exhibit the sterility of the effort. We cannot pay for suspension bridges with the cash in our breeches pockets. Cash transactions have become largely matters of cigar stands and the corner grocery. In wholesaling commodities you grant credit or go out of business. It is not that Wall street has so much money, as that it controls it. There is nothing which terrifies the business world so much as rumors of liquidation. We know that if cash were demanded to-morrow for all our obligations, the nation would be bankrupt.

"If we admit that our commerce has outgrown our cash, we must recognize the fact that in the integrity of our system of credit lies the stability of our whole commercial fabric. You must know that for every bit of paper in your vaults there is somewhere, either in transit, in storage, or in the hands of the consumer, an ac-

tual value in the commodities to represent it. If these commodities are in any manner destroyed, the immediate owner may be indemnified by insurance, but the great fabric of credit is directly impaired by that loss.

"When, year after year, these created resources and the buildings which house them are wasted by fire to the amount of more than \$200,000,000, it is easy to see that the very foundation of the Nation's commerce is being subtly sapped by this plague of fire."

ANOTHER \$500,000 COMPANY.

The Wichita Fire and Marine Insurance Company is being organized at Wichita with a proposed capital of \$500,000. W. C. King, G. B. Richardson and R. J. Pryor will be general agents for the company. Mr. King has been a special agent for the Central National Fire and Mr. Richardson has been associated with Eastern companies.

IN A FALSE LIGHT.

The National Surety Company has been placed in a false position in St. Louis in the case of the City of St. Louis vs. the Kern Incandescent Gas Company, as principal, and the National Surety Company, as surety, through the raising of a defense which claims in effect that at the time the bond on which the case is based was executed it could not bind itself to a liability in excess of \$100,000. **The attorneys who are conducting the defense are employed and paid by the indemnitors,** through the National Surety Company, and the latter **had no voice or discretion in the character of the defense to be made.** As a matter of fact the surety company is defending nominally only, and it represents the suggestion that it would adopt such a means of defeating a claim.

The company has handed "The Chronicle" a memorandum of the case which shows this transaction to be another of the rotten deals of the rotten Dean administration of the National Surety, the wiping out of which has occupied the principal time of the present administration for the last few years.

The expose of political grafting and crooks in St. Louis is an old story now, and this is an echo of one of their jobs aided by a "benign" Christian Science executive surety head.

This is the memorandum:

Ten years ago, under the old administration of the company, it signed a bond in the city of St. Louis for the Kern Incandescent Gas Light Company, which company was declared in default and became insolvent. Suit was brought against the surety company for \$200,000, and this suit has been in the courts for several years, the indemnitors paying the entire legal expenses thereof.

The National Surety Company had as security on such bond a bond of indemnity signed by several wealthy and reputable men, such indemnitors having a bond of the American Surety Company for \$100,000. Among the defenses raised by the indemnitors was that the contract which the bond guaranteed was illegally executed by the city and the National Surety Company believes such to be the case.

The courts passed upon demurrers filed by the city affecting various defenses of the company, and a few days since the attorneys for the indemnitors (not the American Surety Company) **forced the National Surety Company to raise the defense that the bond was illegal because it had exceeded its limit.** Failing to raise such defense the indemnitors would refuse to pay the company any loss it might sustain.

The National Surety Company wants the public to understand that it had no alternative, and was forced to make this defense to protect its interests, urgently protesting against

it, and exceedingly regrets that it was raised. It is not the policy of the National Surety Company to plead the "baby act" on any of its obligations.

An insurance company may fix the terms upon which it will insure persons, and, a person having accepted insurance on such terms, they constitute a contract between the company and insured, which courts may not vary. No indemnity should be allowed for an insured under an accident policy on account of an extension of the injury occasioned by his negligence to observe directions of his physician.—Maryland Casualty Company v. Chew (Ark.) 642.

OLDEST STORY EVER TOLD.

Underwriting society in Chicago is enjoying a little speculation about an affair of the heart in which two families of prominence in fire insurance are chiefly interested. A certain Eastern company official has found it agreeable to make more visits to Chicago of late than really seemed necessary when it is considered that the company's Western department is in eminently competent hands. Now rumor has it that it is neither the Western department nor the manager thereof that acts as the magnet, but the manager's daughter, a lady of fine intellectual qualities and of many charms.

"WE NEED THE MONEY."

The New York property and accounts of the Bankers Surety Company, of Cleveland, O., were attached on Tuesday on complaint of Sanders & Flanders, until quite recently metropolitan managers, in an action to recover a large balance claimed on commission account under contract.

The Bankers has created the impression, whether or not justified, that its financial obligations are either being handled carelessly or that it is in a strain for ready money. This,

with its confession of plunging in on excise bonds in this State for dives and suicide halls, because "we needed the money, although we knew it was dirty," according to one of its officials, has not tended to an appreciation in its stock values.

PEACE RESUMED.

For appearances sake, at least, O. L. Van Laningham has decided, it is reported, to vamoose 'Frisco for awhile, so far as his personal pulchritude, phronological powers, psychical control, etc., is concerned. He will "touch" the 'Frisco interests he is allied with by the Christian science method of "absent treatment."

AN IMPORTANT SURETY DECISION.

The Supreme Court of Michigan, considered one of the very best American supreme tribunals, rendered a decision last week of surpassing interest to surety underwriters. It enunciates some new matter for text books, and because of its importance the salient points are given. It is regretted that lack of space prevents its full reprint, because it is destined to be a light-house on a rocky and dangerous shore of suretyship. Every company writing bank depository bonds should promptly put it in the hands of every agent and attorney.

The case in point is the old familiar one of the Chelsea Savings Bank of Detroit, of which the State Treasurer, Glazier, was president, and which went by the board in the panic a little more than two years ago. On January 26, 1905, Glazier appointed the Chelsea Bank a State depository "as authorized by law." The bank applied to the American Surety for a \$50,000 depository bond running to the State Treasurer. In the application it stated, "Estimated average monthly guaranteed deposits for year \$200,000. Rate interest $1\frac{3}{4}$ per cent. thereon." In March, 1905, it made application for a bond to run to January, 1907. It contained the usual stipulation of the principal to hold the surety harmless, and the usual subrogation and other clauses. The premium charge was \$125.

It also contained the co-insurance clause, limiting the liability of the bond to a proportion of any loss as the penalty of the bond might sustain to the total amount of bonds held by the State.

December 18, 1907, when the bank suspended, the State's deposit amounted to \$685,587. In this hearing the receiver testified that the least value placed upon the assets of the bank was more than \$685,000; that he had distributed in dividends or had on hand to distribute about \$536,382, and hoped to collect for distribution \$100,000 additional. He had paid upon savings deposits 50 per cent. and on commercial deposits 40 per cent.

The bank furnished to the State as security for State deposits and there were outstanding when the bank was closed bonds aggregating \$200,000, as follows:

Title Guaranty and Trust	\$25,000
Federal Union Surety	57,500
Bankers Surety	17,500
Metropolitan Surety	25,000
U. S. Fidelity and Guaranty...	25,000
American Surety	50,000

On demand of the State the American Surety paid the face of its bond, with interest, and then set up the following contentions in its suit in re-

covery, which sounds like good reasoning:

Stating Its Case.

First. We contend that where a creditor having a means of satisfying the debt relinquishes or loses it by his willful acts or negligence, the surety will be discharged, being released by any act of the creditor which deprives the surety of the right of subrogation. We apply this principle on the theory that the State is entitled to priority in the payment of its debts, and that the State could have received full payment had she taken advantage of her prerogative. That this would have operated to the benefit of the surety either by absolving it from payment, or if it had paid by placing in its control a right of subrogation which would have resulted in full repayment.

Second. We contend that the obligation of the American Surety did not extend beyond the loss sustained by the State on this particular bond, and that the deposit covered by this bond was a separate and distinct debt, which the surety has paid in full, entitling it, therefore, to be repaid out of the assets of the bank on well recognized principles of subrogation.

Third. We contend that where there is a bond in a fixed amount to secure a floating balance which may exceed that amount, the surety is entitled to have the dividends from the insolvent estate prorated to the whole debt, and that surety is entitled either to the dividends on the secured part he has paid in full or to have the prorated part of the dividend applied in diminution of the amount he has to pay.

Fourth. That the agreement of indemnity given by the bank of the surety company took effect as of its date immediately upon payment on the bond, and that such agreement entitled the surety to stand as a creditor of the bank and receive its share of any dividends paid.

The General Plea.

First. As a provision limiting the surety's liability and as one of the terms of the bond, when read in connection with the statute, it was distinctly agreed that the State Treasurer should never deposit in the bank a dollar of State surplus funds in excess of the aggregate penalties of the bonds furnished.

Second. It having been so agreed that for every dollar of deposit there must be an equivalent penalty in some bond, this further provision was inserted—"It is mutually agreed and understood that the said surety shall be liable hereunder for only such proportion of the total loss sustained by the said Frank P. Glazier, as Treasurer of the State of Michigan, or his successor or successors in office, as the penalty of this bond shall bear to the total penalties of all bonds furnished by said Chelsea Savings Bank as principal, in favor of said State Treasurer."

Third. The rights and the liability of the surety must be determined as if the Treasurer had complied with these provisions of the bond, and had not deposited more than \$200,000, the aggregate penalties of all the bonds given. So far as this surety is concerned it is as if no more than \$200,000 had been deposited. Or, which is

the same thing, as if the Treasurer had taken bonds with penalties in the aggregate equaling the deposits. Because such was the liability which it assumed, and not some other different liability. In other words, the liability assumed by the surety on this bond, cannot be increased, nor can its rights be diminished, by the Treasurer's violation of the terms of the bond.

Fourth. When the bond agrees that the loss shall be proportioned, it necessarily also agrees that the dividends shall be apportioned. Because the loss cannot be proportional, without apportioning all payments whether by dividend or otherwise.

Fifth. Wherefore, by the express terms of the bond itself, this surety is entitled to its proportional share of the dividends. That is, to dividends upon \$50,000, the amount of the indebtedness which it has paid. It may be urged that the entire scheme for depositing State money in this bank was illegal and against public policy. If this were so, which I do not here wish to take the responsibility of either admitting or denying, even then, the State can no more be permitted to refuse apportionment of the dividends than it could be permitted to refuse change on accepting a hundred dollar bill in payment of a fifty dollar liability. It ratified the bond, after the event, with full knowledge of the facts, at least so far as to demand and receive payment upon it, and it cannot ratify it in part, without ratifying it as a whole. The doctrine of public policy cannot be made use of to increase the surety's liability. That would be a still greater breach of pub-

Contingency Reserve (Surplus)	655,149.17

lic policy. The liability of the surety was \$50,000, less its proportion of the dividends. Nothing more.

The Court's Decision.

In affirming the lower decree the court said in part:

The language employed is not ambiguous, the ordinary meaning thereof is not doubtful. In terms the liability of the surety is that of the principal limited only by the penalty of the bond and by provision for paying no more than such proportion of the total loss sustained by the Treasurer of the State as the penalty of this bond bears to the total of the penalties of the bonds furnished by said bank as principal in favor of said State Treasurer. It is said that the express obligation of the surety denoted by the terms of the contract and bond is modified and restricted by the statute; that there was, in effect, an agreement that for all moneys of the State deposited in the bank security would be taken; that this is recognized and is indeed contracted for in the term "as authorized by law," employed in the agreement of the State Treasurer and the bank. It is not to be supposed that the State, in accepting security, however ample, released the right to rely, also, upon the property of the bank. Assuming the legislature to have intended that the good and ample security required should be distinct and separate from and in addition to the credit and security afforded by the assets of the bank and the liability of its stockholders, it is a provision exclusively for the protection of the interests of the State.

Violation of Law No Release.

If otherwise construed, if it is held that the statute qualifies the contract of every surety and amounts to an agreement between the State and those furnishing security pursuant to the statute that there will be no breach of the official duty to require good and ample security, the whole purpose of the law is liable to be defeated by a careless or willful failure to obey the law. The term above referred to, employed in the agreement to deposit, must be given a meaning in harmony with this construction of the statute and must be held to mean that the designation of the bank as a depository of State funds is an official, authorized designation. The provision in the bond which limits liability of the surety to such a proportion of the total loss sustained as the penalty of the bond bears to the aggregate penalties of all bonds is effectual, according to its terms and its reasonable intent, without reference to the statute. The accounts of the State with banks of deposit are, of necessity, fluctuating. In a particular case, the amount on deposit might be much less than the aggregate of the security furnished. It follows that a violation of the statute cannot be complained of by the surety and the statute in no respect modifies the express obligation of the surety to respond, as the principal should respond, to the amount of the penalty. *Detroit vs. Weber*, 26 Mich., 284.

Company's Theory Rejected.

The debt due to the State from the bank is the sum of all deposits. The bank, the principal in the bond, has not paid the debt and upon its failure so to do the surety became at once

liable to pay the amount which it had agreed to pay. The surety has paid. It paid the entire penalty of the bond because the debt due to the State from the bank exceeded in amount the aggregate of the penalties of all bonds. The debt of the State has not been paid. The State is proceeding, as a creditor of the bank, to secure and it has accepted, as they have been divided by the receiver, such proportion of the assets of the bank as its debt bears to the total of debts of the bank allowed by the court. It appears that this proportion of the assets will not pay the State or any other creditor in full. The contention of the surety that there has been no loss to the State as to that part of the deposit which it secured, that so much of the deposit as it secured was a separate and distinct deposit and debt, that therefore it has paid the debt in full and is entitled, to that extent at least, to be subrogated to the claim of the State against the bank and to recover dividends, requires little consideration further than it has already, inferentially, received. We reject the theory that a particular bond furnished by a depository of State funds, conditioned like the bond in question here, should be treated as securing a particular deposit of funds. And this as well when the State has the "good and ample security" which the intervenor says it should have taken as when it has not.

Surety Not Entitled to Dividends.

The deposits in the Chelsea Savings Bank were made generally, from time to time, and were from time to time withdrawn. That this would be the course of affairs was to be expected, and that it was so understood is evident. All security was given and accepted for all of the deposit, whatever the amount of the deposit might be. If the intervenor secured and intended to secure any particular deposit of \$50,000 it had no occasion to provide that it should pay no greater part of any loss than the proportion of the penalty of its bond to the total penalties of all bonds. Its undertaking is that its principal shall repay all moneys deposited and it must be construed as a security for the whole debt. It is conceded, and the authorities cited by counsel for the intervenor sustain the concession, and the general rule, that in such a case the guarantor is not entitled to a share of the dividends which are declared and paid in reduction of the whole debt.

1 Brandt, Suretyship and Guaranty, 3d Ed., Sec. 277.

Ellis vs. Emmanuel, Law Rep., 1 Excheq. Div., 157.

Dumont vs. Fry, 14 Fed., 293.

Question of State's Preference.

If the State is of right entitled to a preference and to have debts due to it paid to the exclusion of other creditors, the assets of the bank would have paid the demand substantially in full. Neither in the constitution nor in the statutes of the State is the right of the State to a preference and priority over other creditors distinctly asserted. If the right exists it is as a prerogative of sovereignty. Successive constitutions of the State have declared, generally, that the common law shall remain in force and it is not doubted that by the common law of England it was a prerogative right of

SOME INTERESTING FIGURES.

Superintendent of Insurance Hotchkiss on Tuesday issued his preliminary pamphlet of tabulations of life, casualty, credit, fidelity and surety insurance companies, fraternal orders and assessment associations regarding their financial transactions in New York State for the year ending December 31, 1909.

The tables are compiled from the annual statements of the fifty-four companies operating in this State prior to their audit by the department and are published in advance of such audit in order that the insuring public and insurance interests generally may be placed in possession of information covering the operations of the various companies and associations at as early a date as possible.

After their audit the annual statements will be published in full in the usual form, known as Parts II, III and IV of the department report; Part I, covering the business of fire and marine insurance, will be issued at an early day, and consequently no figures pertaining thereto are included in these advance tables.

Copies of the pamphlet can be obtained on application to the insurance department.

Some Figures.

The preliminary report shows some interesting figures of casualty, credit, fidelity and surety companies, as follows:

Total capital	\$26,291,225
Premium income	84,049,408
Total income	90,987,161

Disbursements.

Losses paid	26,443,649
Commissions	18,640,848
Dividends	3,005,065
Salaries, etc.....	11,009,932
Rents	870,950
Taxes and department fees	1,811,745
All other disbursements...	9,496,211

Total disbursements ... \$71,468,642

Excess of income over disbursements	\$19,563,837
---	--------------

The only company showing an excess of disbursements over income is the newly admitted International Fidelity Insurance Company of Jersey City, which shows a premium income of \$101,450 and disbursements of \$192,977, a rather remarkable showing that seems to call for attention on the part of the department. Perhaps the full report may explain the \$45,318 excess of outgo over income on a capital recently increased from \$100,000 to \$300,000. Perhaps this increase partly represents dividends paid in stock from the actual cash surplus, but it looks a bit odd. However, this company has had a remarkable career. Organized originally by persons connected with the Singer sewing ma-

chine interests and for the sole purpose of writing the fidelity bonds of the Singer company all over the world it was a paying proposition because it had but one office to maintain, had no agencies, no other than its home State fees to worry and bedevil it; in fact one man and a girl was all the force required to run it. In addition adjustment of losses by default of agents in China, Brazil, Abyssinnia or Timbuctoo were "easy." The company was in a position to question liability without creating a howl. It was simply doing a little side business for the Singer people, and it is not supposable that they would let it suffer.

A Prosperous Year.

Summed up 1909 was quite generally prosperous for these companies. There was a premium income increase over 1908 of about ten millions, and this prosperity has afforded the incentive for the horde of new casualty companies proposed, projected and pulled off during the past year or so. In 1909 there were 37 such projects and it was a source of astonishment, but if 1910 continues its rate to date on that same line for the balance of the year 1909 will be left far behind.

The new employers liability laws—Federal and State—have given casualty insurance a tremendous momentum and the biggest development of the near future of any line of energy is certain to be in that field.

COMMERCE TRUST COMPANY.

There was a mild surprise in the surety and banking worlds when the Commerce Trust Company, of Kansas City, launched its trial motor craft on the uncertain seas of suretyship after every other trust company in America that ventured the journey had either been wrecked by it or had discreetly returned to shore.

The trust company that also does a surety business is in for a hard fall unless all past history is reversed, the law of average is suspended and human nature perfected. Three of them have been pulled into the rapids in the past few years by their surety cargo's uncertain shifting, and listing and the others who were awake took the cue and quit it. For this reason it was surprising that at this late hour the Commerce Trust would essay the perilous dash. However it, too, has seen the light and its surety business is to be separated from its banking interests, whether by reinsurance or the creation of another corporation to which it will be transferred, is not stated, but the latter course is most probable.

The company has written somewhat

conservatively and in a limited area. Last year it had \$65,886 premium income with less than \$5,000 losses. "The Spectator's" handy chart of surety companies shows management expenses of \$226,457, but this undoubtedly covers the entire expenses of the trust company. The expenses of the surety department could hardly have exceeded the salary of a manager and stenographer, commissions, postage, stationery and license and legal fees, all told probably not exceeding 60 per cent. of the premium income, leaving a margin sufficient to afford a fair estimate of the possibilities of success for a new company.

James Van Buren, Jr., is manager of the surety department. He is an old National Surety Company man of the vintage of 1892, and is a careful underwriter and under his direction a new concern will acquire standing and influence.

"PROMOTED" INSURANCE STOCKS, FOR INSTANCE.

Somehow in this world many people we know in whom any sentiment lingers

Are daily and constantly seeking a fire at which to be burning their fingers;

They never grow wise from the scorchings they get, however disturbing the feeling,

But seek other fire that their fingers may touch as soon as they're through with their healing.

And maybe, some day, they will find to their pain, in agony twisting and turning,

That fires down below have been kept in a glow to furnish them chances for burning,

And that what on earth was amusement with zest, productive of pleasure and laughter,

Is far from a joke when their fingers they poke in the flames of a blazing hereafter.

SECURITY MUTUAL LIFE INSURANCE COMPANY

Binghamton, N. Y.

ILLINOIS SURETY CALM.

Chicago, Tuesday (Special.)—The annual meeting of the Illinois Surety Company this morning was entirely harmonious, none of the trouble which has been predicted developing. Old directors were elected except Fred. M. Blount, John P. Hopkins, Albert G. Wheeler and Andrew J. Graham. In their places were elected William Gillette and E. S. Hobbs, of Aurora, Ill.; George E. Dutton, of Sycamore, Ill., and D. C. Mackey, of New York, Metropolitan manager of the company.

The stockholders voted to increase the capital stock from \$250,000 to \$500,000.

The directors re-elected President A. J. Hopkins and Secretary H. W. Watkins and elected William Grote to the vice-presidency, which has been vacant since Hopkins was elevated to the presidency, some time ago.

Regarding reports of dissatisfaction among stockholders about the fee paid him for organizing the company, President Hopkins says that stockholders at their first meeting in 1905 unanimously voted that organizers be paid 6 per cent. of amount paid in as capital and surplus. Check was drawn in his favor, and from it commissions at that rate were paid others who had sold stock. He says this action was taken on initiative of the largest stockholder, Albert G. Wheeler.

This check was for \$18,000, and Hopkins says that it was not alone to pay him for work and expense in selling the \$300,000 capital and surplus, but that others who sold any stock were compensated out of it at the rate of 6 per cent. on what they sold. He and his law partners got about \$15,000 of it, it is reported, and others got \$3,000.

It was in evidence at the meeting that certain minority interests were opposed to the obvious intent of Hopkins to make the company a one man concern, and he to be the man. And for this reason the minority raised the issue that was lost. Largely influencing this currenting of the stockholders final decision is a political story of no mean dimension. It must be remembered that Hopkins is a politician of a certain type. He held down an Illinois chair in the United States Senate at Washington for one term, and was rejected when the clock denoted time for sending another dignity to that exalted seat.

Illinois has not been peculiarly fortunate in its selection of Chicago United States senatorial timber during the last decade or so. There are many whose memory has not dimmed by any means. There are also many

whose anticipations of the future may well be heeded.

The new directorate of the Illinois Surety is not calculated to inspire confidence by any means. The more or less vague connection of the chairman—E. H. Gary—of the Steel Trust, as the press brings out, in the company's activities, is regarded as entirely apocryphal. The New York end is exceedingly weak so far as present results indicate, and the end is a good subject for guessing.

CREDIT MEN AROUSED.

Credit insurance men are showing considerable interest in the Midland Casualty Company of Chicago in the past couple of weeks. This interest appears to be of varied character. Some is that of men who are looking for something better than they already have, while others are more inclined to be critical. This has come about through the action of A. A. Alles, manager of the credit insurance department of the Midland Casualty, in sending circulars to all the credit insurance agents in the country. Some of them have expressed a desire to become associated with the new enterprise, while others have sent the literature to their home offices, which in turn have investigated to learn whence this disturbance arises.

Mr. Alles has some ideas which he considers an improvement on the London Guarantee's plan of handling credit insurance, and he is going to try them out on the Midland Casualty, provided, of course, that that company actually gets started. Mr. Alles has been in the business a number of years in various connections, but he is not very well known at Chicago. He went there recently from Pittsburg. He seems to have exerted considerable influence over the promoters of the Midland Casualty. While that company's original plans contemplated the writing of credit insurance in time, the promoters apparently had dropped the idea of taking up that branch until the company should be thoroughly established in several other branches. Now it is stated that credit insurance will be one of the first lines taken up. If the general public know anything about casualty insurance, this would certainly be a fine card to sell stock on.

Brave Souls.

An inquirer hands in this clipping and asks what a "salvage company" is. There's a year's free subscription to "The Chronicle" for the man who can answer.

This is the clipping:

The Merchants Security Company is being organized at San Francisco to write credit insurance. Articles

of incorporation were filed last week showing proposed capital stock of \$2,000,000. The International Mercantile and Bond Company will act as the salvage company. Among its directors are some of the foremost business men of the Pacific Coast.

The "Post Magazine Almanack" for 1910 has been issued by T. J. W. Buckley, 9 St. Andrew street, Holborn Circus, London, E. C. This is the seventieth year of publication of the insurance directory, reference and year book, containing statistics and facts of ordinary life, industrial life, fire and accident insurance.

AN IMPORTANT SURETY DECISION.

(Continued from Page 13.)

the sovereign, with some exceptions and limitations, to have debts due to him paid ahead of debts due to his subjects. Whether the States of the Union, independent of statute declarations, have such right is a question which has revealed judicial consideration in some of the States. A collection of cases will be found in a note to Freeholders of Middlesex County vs. State Bank at New Brunswick, 30 N. J. Eq., 311.

See also United States Fidelity & Guaranty Co. vs. Rainey, 113 S. W. Rep., 397.

State vs. Foster, 29 L. R. A., 226.
Seay vs. Bank of Rome, 66 Ga., 609.
Giles vs. Grover, 9 Bing., 128 (House of Lords Cases).

The decisions of State courts are not uniform. The question is not presented for decision in this case unless, assuming the right to exist, the intervening surety may insist upon the exercise of the right by the State. The statute, Comp. Laws, section 6144, et seq., points out the procedure when a State bank has become insolvent. The general banking law of which the sections referred to are a part was enacted long after the statute authorizing the deposit of State funds in banks and it has been since its passage many times amended. The funds of a bank, the possession of which is taken under this act by an officer of the State, are required to be paid, as collected, to the State Treasurer. There is no provision for retaining out of such funds moneys due to the State, excluding other creditors of such a bank. On the contrary, rettable dividends are to be made (6146) from time to time on all such claims as many have been proved.

It is instantly apparent that this decision will have a very far-reaching effect in the matter of future depository underwritings by surety companies. However, their experiences in the numerous contemporary instances similar to the foregoing during the "reign of terror" has given them degrees of caution and prudence that will last them an ordinary lifetime.

And yet some indomitable Kansas and Western spirits are forging ahead to organize two or three companies to "specialize" bank deposit and depository bond business. One concern proposes, with a capital of \$200,000, to guarantee the forty or fifty millions of deposits in one of St. Louis' largest trust companies.

It is in evidence that the fool-killer has utterly neglected Kansas insurance and banking-wise.

We do not hesitate to say that, assuming the right of priority contended for to exist, in this State, the courts, in the absence of any assertion of the right by the State, and after the debtor has been divested of all control of its property in proceedings

authorized by and following the statutes of the State, should not, sua sponte, assert the right in favor of a guarantor of the debtor.

YET ANOTHER CONSOLIDATED CASUALTY.

The Consolidated Casualty, of Arkansas this time, has been licensed by that State to operate on the mutual assessment plan. Its home office is Pine Bluff, and its officers are C. W. Clark, president; A. S. Kimball, secretary; L. C. Saunders, treasurer. Mr. Kimball and Mr. Saunders, as Kimball & Saunders, were formerly managers of the Consolidated Casualty of West Virginia for Southern Arkansas.

Inspired, probably, by the brilliant (if brief) career of their prototype and alma mater of West Virginia and Chicago, these gentlemen have probably evolved an improved financial scheme that may work—in Arkansas.

NEW YORK WANTS EXAMINERS.

An examination by the New York State Civil Service Commission will be held on April 30 for the position of assistant actuary in the New York city office of the State Insurance Department at a salary not to exceed \$3,000 a year, and for ten examiners at a salary of \$1,800 a year to start, with subsequent advances to \$2,500. Applicants are wanted between 25 and 35 years old, with education in accounting, insurance or law. The examination will be held in New York city and other parts of the State and are open to the residents of other States than New York.

A SUGGESTION TO INSURANCE LEGISLATORS.

The most constant, perhaps the most costly, blunders of government have been in the financial department. Declining Spain ever managed to levy taxes in the way most oppressive to commerce. The one incurable trouble of Bourbon France was a wretched fiscal system and an everlasting deficit. Intractable finances probably inflicted as much pain and woe upon the struggling American Colonies as England's ships and soldiers did. For some years Germany, so formidable otherwise, has lacked courage of capacity to bring her fiscal system into sound order. Finance is the governmental Africa—one of the last regions upon which the sun rose—and it is still only half light.

As for economics it ranks somewhere between psychology and psychics—a step, perhaps, ahead of this new-fangled "engenics" which the

professors lately invented. Concerning so gross a phenomenon as the panic of two years ago there is no clear, settled opinion among the learned. We hear rappings; the table seems to tilt; a voice in the dark—possibly that of departed little bright eyes—cracks a stale joke. But as to what it really signifies we are much at a loss. A round silver dollar seems about the commonest, simplest of objects, but scientifically it is as mysterious as radium.

We ourselves are fond of finance and economics, because those subjects have the charm of the undiscovered. We think a new American lies somewhere concealed within them.—"Saturday Evening Post."

Davis & Farley, Cleveland, Ohio, agents of the Federal Union Surety and the Casualty Company of America, have been made managers for Northern Ohio for both companies.

 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
 For these purposes the "select and ultimate" will be most useful.

Mixed Praise and Censure.

The Mutual, With Its Expenses Halved and Its Dividend Rates Doubled, Is Nevertheless Criticized.

On Monday, April 18, Hon. William H. Hotchkiss, Superintendent of Insurance, gave out for publication a statement concerning the report of his examiners of the results of an examination of the Mutual Life Insurance Company, which statement is in full as follows:

A report of an examination of the Mutual Life Insurance Company for the years 1906-7-8 has been placed on file by the Superintendent of Insurance. The examination was on the financial statement of December 31, 1908. It was quite exhaustive and was in progress several months. This is the first examination of this company since the laws recommended by the Armstrong committee were enacted.

Complete Accounting Acknowledged.

All accounts of the company were checked and all assets and liabilities verified. The report shows that the premium income from policyholders aggregates over \$50,000,000, that the interest rent income is approximately \$25,000,000 and disbursements for the benefit of policyholders amount to nearly \$50,000,000 annually. The company had ledger assets December 31, 1908, of \$515,282,177.30; total admitted assets, \$544,185,205.99. In addition the report contains a full explanation of the company's method of dividend accounting and distribution, both annual and deferred. The examiners state that proper restraints have been placed by the company upon the supply department, where expenditures for legislative and other improper purposes were concealed by the previous management, and that the system in operation at present will prevent a recurrence of such practices.

Big Earnings.

A compilation of the gains and losses of the company for the years under examination show that under the Armstrong committee amendments to the law the company has added to surplus over \$49,000,000, of which approximately \$33,500,000 has gone to the dividend account, and the balance, of about \$15,500,000 has been used to bring the surplus up to the

limit permitted by law and to allow the charging off of the value of a portion of the real estate. The company has increased its dividend factors several times since the new laws went into effect. The report also shows in detail what efforts the company has made to dispose of its stocks, bonds and real estate, required by the legislation of 1906. The report gives detailed information regarding ledger assets, premiums, dividends, profits and losses on assets, collateral loans, schedules of dividends under various forms of policies, schedules of surrender policies, officers' salaries and shows the increase in the percentage of expenses.

The company understated its liabilities on account of death claims December 31, 1908, by \$570,164.64. Proper action has been taken to avoid this in the future. The legal department also did not report all the contested claims, as required by the law, but has agreed to correct this practice.

Has Section 97 Been Violated?

The report on the whole is complimentary to the company. The examiners find that the company has complied in the main with the insurance law as amended by the Armstrong committee. The severe criticism is made, however, that the company has in one particular evaded the restrictions of section 97 of the insurance law, which limits the amount a company can expend in securing new business.

The examiners find, for instance, that during the year 1908 the company paid for "supervision of old business," the sum of \$354,144.00. There is no record at the home office of the company which satisfactorily explains what was done in return for the expenditure of this money. The company claims it was paid in good faith to various agents for looking after business already on the books to prevent the lapsing of policies.

The examiners state, however, that an investigation of a few of the branch agencies which received a considerable part of this amount leads to the inevitable conclusion that the money was paid not for supervising old business but substantially in the form of bonuses to those agents who were most successful in securing new business. The suggestion is made by the examiners that if companies can

pay agents amounts of money beyond the limits as provided by law under the pretense of protecting the old business, but really to stimulate the agents to secure new business, the salutary purposes of section 97 can be utterly defeated.

An Old Item of "Agents' Advances."

The examiners also note that in 1906, during a campaign for the election of directors under the amended laws, the company increased its agents' advances by more than double the amount paid during any other quarter of the year, and that during the same period the managers expended \$169,351.93 more than they had been authorized to expend by the committee of the board of directors.

The settlement of the McCurdy suits by the company is also criticised by the examiners in the report. It seems that a committee of the board of directors, acting under the advice of Joseph H. Choate and James McKeen, counsel for the company, recommended a settlement of the matters in dispute in the McCurdy suits by which the company received \$750,000 and paid \$987,340.50. The examiners show that the settlement took place upon this basis after this committee had made a detailed report to the company and say that such report was inaccurate in its statement of facts in many particulars and thus the suits were settled by the company upon misleading information.

No Hearing Asked for.

Superintendent Hotchkiss, upon being questioned in reference to the report, stated that he had had no comment to make, as the report spoke for itself. He also said the company had received a copy of the report some time ago and had apparently concurred in the findings of the examiners, as no hearing upon the report has been requested. The insurance law provides that if a company objects to any matters contained in a report on examination it may ask for a hearing and be heard on the issues raised. If no hearing is asked for by the company the report is filed as originally drawn.

Extraordinary Mingling of Praise and Blame.

This extraordinary intermingling of praise and blame has, perhaps, never

been equalled in any report of a State examiner upon the condition of a New York life insurance company. After finding such extraordinary improvements in the management of the company, including an economy which has reduced the expenses more than one-half and increased the average dividends to policyholders more than 100 per cent., the superintendent selects four or five matters concerning which the management of the company is criticised, some of them being several years old.

The only one of these, which is a confirmation of rumors which have been flying about for some months, is that the company is paying under the head of "supervision of old business," a considerable sum, a part of which at least is believed to be reaching agents who are giving their sole attention, or nearly their sole attention, to the production of new business, without any duties resting upon them in regard to the old business. The others had not been heard of. Doubtless, if there are such abuses, the fact that they are present is as much of a surprise to the chief officers of the company as it may have been to the examiners of the department.

The foregoing has, of course, no reference to cases where there may have been incidental advantages in establishing the district agencies, owing to the fact that the district agent could be charged with the collections of old premiums in the district, and so would be remunerated therefor, but only to such cases, if any exist, as the following: The assignment of a collection fee upon a block of old business, or what is more to the point, of a lump sum in respect to this old business, the sole duties, or virtually the sole duties, of the agent consisting in canvassing for new business.

President Peabody Meets the Issues Without Flinching.

The Mutual Life Insurance Company did not ask for a hearing upon the report of the examination, but seems to have preferred to meet the matter openly and squarely through the public press, making a definite, clear-cut issue with the examiner of the department. The following interview was given out on the 18th by President Charles A. Peabody:

The publicity statement (so-called) issued by the department contains three criticisms of the company. Two of them relating to expenditures for "care and supervision of old business" and to agents' advances during the year 1906, are too silly to discuss, as will be apparent to any one reading the report. It is sufficient to say that in spirit they misrepresent the facts.

I maintain that the spirit and letter of the Armstrong law has been maintained by the Mutual Life, and that law has in good faith been lived up to. If it can be shown it has not been I must take the consequences whether I like it or not.

The only other subject in the report of the examiner of the department which requires any attention is that relating to the settlement of the company's claims against the former officers of the company.

The proposals of settlement in these matters were referred by the board of trustees to a committee of trustees, consisting of Benjamin F. Tracy, lawyer; Edwin S. Marston, president of the Farmers' Loan and Trust Company; H. Rieman Duval, president of the American Beet Sugar Company; Henry W. Taft, of Strong & Cadwalader, lawyers, and Frederick H. Eaton, president of the American Car and Foundry Company.

None of these was connected with the company during the period in which these claims arose.

This committee acted under the advice and approval of Messrs. Joseph H. Choate and James McKeen, the company's counsel having the matter in charge. They held a number of meetings, extending over three weeks, and examined the facts and circumstances upon which the claims of the company were based and made a report to the trustees recommending the settlement which was afterward made. The examiner of the Insurance Department has reached a different conclusion on the same facts and circumstances. As to whether these seven gentlemen acted wisely in their conclusion, or as stated in the report, did not understand the subject or "purposely misled the board of trustees," I leave the policyholders, to whom we are accountable, to judge. The comparing of their judgment and integrity with those of the examiner of the department presents a question which I do not care to discuss.

Others Have Their Say.

In addition to this statement, General Counsel James McKeen, who was associate counsel with Governor Hughes in the Armstrong investigation, furnished the following interview, which was published in the New York "Tribune" on the 19th inst.:

It was an advantageous settlement.

The company owed Robert McCurdy and the firm of Charles H. Raymond & Company certain amounts on commission for business which the company had accepted. It is true that those contracts for commissions were pronounced improvident, but we had to admit the existence of the contracts, and the money restored to the company should not be balanced up as against the payments for our just debt for commissions.

General Benjamin F. Tracy, chairman of the committee which recommended the settlement, was quoted by the same paper as follows:

As to the statement that we paid out nearly a million dollars to get back \$750,000 why the million dollars constituted a just claim against the company and had nothing to do with the \$750,000 which was restored to the company.

Samuel Untermyer to the Fore.

One of the humors of the situation is that it afforded Samuel Untermyer, the erstwhile counsel of the International Policyholders' Committee, an opportunity to express himself more or less oppositely upon some of the issues raised by the "publicity statement," which he did in the New York "Times" of the 19th inst., as follows:

I know nothing about the merits of the settlement with the McCurdys, but I know a great deal about the use that was made of the policyhold-

ers' money and organization to reelect the old management in the elections of 1906.

You ask whether I am surprised at these revelations of the use which the trustees of the Mutual Life have made of the policyholders' money in connection with their campaign to reelect themselves and defeat the efforts of the policyholders to dislodge them and to secure a change of management.

I am not in the least surprised.

This sum of \$165,000 is only a fraction of the sums that were improperly spent by the New York Life and the Mutual Life. When you add to the money extracted directly out of the till the many other ways in which they squandered the funds and used the agency force in that election to prevent the disclosures that would have followed changes of management in the two companies, \$1,000,000 would be nearer the cost of that election to the policyholders.

The agency and salaried forces in both companies, besides the agency forces in other companies, were put into service in that memorable life and death struggle between the old crowd and the twenty-five distinguished public-spirited gentlemen who constituted the Policyholders' Committee, with such men as Richard Olney of Massachusetts, Judge George Gray of Delaware, Governor Johnson of Minnesota, Alton B. Parker of New York, and the then Governors of four great States among their number.

We are a callous, long-suffering people, but even with us this shocking state of things cannot last forever. The time will come when the State must take a hand in the elections of these so-called "mutual" companies, which are mutual only in name, and help the victimized policyholder to assert his will.

Under present conditions these elections are a farce. Even under the direction of a vigorous, irreproachable Superintendent of Insurance, such as we have now, the attempt to exclude the agency force from controlling the elections failed. This vast army of paid agents can overwhelm any movement by the policyholders, as they did in 1906. So long as the officers run the companies in the interest of the agents rather than in that of the policyholders their tenure is secure, no matter what they do.

I hope means will be found to uncover the transactions of the past few years, to enforce restitution, and to further amend the laws so as to permit either the intervention of the State on behalf of the policyholders or the exclusion of the agency force from controlling the elections.

The report on expenditures and the showing of increased dividends are a great tribute to the wisdom of Governor Hughes in the face of the reactionary disposition of the management. But I dread to contemplate what is going to happen when the policyholders lose those two watch dogs of their treasury, the present Governor and Superintendent.

President Peabody Promptly Replies.

To Mr. Untermeyer's assertions, President Peabody responds in the following forceful manner:

The statement which you show me,

prepared by Mr. Untermeyer, only shows that he has indulged once more in his propensity for "butting in" and attaching his name to anything which may involve a little passing notoriety.

His remarks are as truthful as most of his utterances; that is to say, there is not one word of truth in them.

His statements as to the conduct of the election of the Mutual Life Insurance Company to my knowledge (and I have no doubt this is equally true in the case of the New York Life Insurance Company) are entirely false, and no one knows it better than Mr. Untermeyer.

During the campaign preceding the election of 1906 he made two proposals to me, either one of which would have involved my betraying the interests of the policyholders and indirectly contributing to his inordinate vanity and greed.

He was unable then and is unable now to see why I did not care to accept his very flattering proposals, for the reason that his temperament and character make it impossible for him to understand or appreciate the ways and methods of decent business men.

Fortunately the intelligence of the policyholders recognize a demagogue when they saw one, and they expressed themselves in a manner which could not be misunderstood.

But I waste words in expressing my opinion of the gentleman in question. My opinion is that of the business community generally.

President Kingsley Also Accepts the Challenge.

President Darwin P. Kingsley, of the New York Life Insurance Company, which is also embraced in the denunciatory remarks of Mr. Untermeyer, rejoins as follows:

Mr. Untermeyer at the time of the life insurance election of 1906 had a suit brought against us by a man named Farrelly based on the alleged spending of policyholders' money. Justice Dowling bowled that suit out of court. After that Nelson B. Hadley, the Chief Examiner, who has examined the Mutual Life, examined the New York Life. He spent months at it, and found nothing wrong because there was nothing wrong for him to find. No policyholders' money was spent in that election except such as the law required us to spend in making up the lists of policyholders and

doing other things necessary for holding the election.

The New York Life is not in alliance with Wall Street. There is no ground upon which Mr. Untermeyer can say it is. I assume what he says about agents' working for administration ticket in the election is true. That was because they believed in the company and did not believe in the International Policyholders' Committee. Speaking of more recent elections, there have been no opposition tickets in the field in the New York Life. The statement I made that not one cent of the policyholders' money was spent for campaign purposes in that 1906 election applies equally to subsequent elections.

Opinion of a Leading Daily Paper.

The Brooklyn "Eagle," in commenting editorially upon the publicity statement of the superintendent, under the caption "Crusading Without Proofs Should Prove a Losing Activity," expresses the following opinion:

The Mutual, the Equitable and the New York Life insurance companies were the three great organizations which were supposed to undergo thorough examination at the hands of the Armstrong Committee, years back. The legal inquisitor of that committee was Lawyer Charles E. Hughes, since twice made Governor, and since revealed as one of the most aggressive executives and one of the most incisive orators of the Republican party. The three great companies were ransacked, reformed and reorganized, at least the claim and belief that they were may be said to have been accepted in consequence of the Hughes-Armstrong investigation.

The surprise will be general should such an impression be shown to have been a mistake. The allegation to-day, that the reorganization of the Mutual was a fraud or a deception, will startle those who maintained or accepted the contrary conclusion. The allegation reflects on the thoroughness or intelligence of Governor Hughes, in whose time and under whose administration the reorganization occurred. The allegation will also, if accepted, be a reflection on the men on whose advice and under whose guidance the settlements between the Mutual and its former officers took place. Those men comprised Benjamin F. Tracy, Edwin S. Marston, H. Rieman Duval, Henry W. Taft, and Frederick H. Eaton, their counsel being Joseph H. Choate and James McKeen.

Not Prepared to Accept Superintendent's Finding.

The people will not be prepared without proofs to reflect upon these men on the unsupported declaration of William H. Hotchkiss, the present State Superintendent of Insurance. The men the Superintendent assails are so much his superiors in reputation and ability that a distinct conspicuity comes to him by assailing them. That fact should not be forgotten, especially by Governor Hughes, who appointed Mr. Hotchkiss, but who has not yet passed, so far as the people yet know, on the allegations Mr. Hotchkiss has suddenly

sprung on public attention. The allegations charge that the settlement between the Mutual and its former officers was misrepresented to the State, although advised, vouched for and virtually made for the company by the distinguished men whom we have named.

We carefully advise an economy of belief in these allegations, until and unless conclusive proofs of them be supplied. None has yet been forthcoming. The allegations merely comprise the undisputed statement of the amounts received from the former officers, the sums found to be due to them and the subtraction of the lesser sum from the larger. The operation in simple arithmetic was known before. The new matter comprises only Mr. Hotchkiss' comments on the undisputed figures in the form of such imputations as reflect on the eminent men who approved of the settlements that were reached.

Made More for Sensational Effect Than With Proof.

Any negotiation in the world could be attacked in that way. Any official is favored by a sort of immunity, in these times, in making them. The process is popular, easy, cheap and prevalent—and should be distrusted on that very account. We shall await the necessary proofs patiently and with interest, but we apprehend they will have to be awaited for a long while. The charges seem to have been made more for sensational effect than with proof or for practical results, and at a period when attacks on business institutions and eminent men are of the nature of an epidemic.

The former managers of the Mutual were extravagant, law-ignoring and reckless. They found themselves not immune. They were properly and quickly dispossessed and went into retirement. They were not prosecuted, and it was believed they could not be. They were ousted, and settled with on terms the stockholders and the new officers reached under the advice and on the terms of the distinguished men whom Mr. Hotchkiss to-day impugns. We hazard little in believing that the men he impugned will outlast and outclass him in law and in opinion. And we predict that the implied assault on the Equitable and on the New York Life, which this attack on the Mutual suggests, will fail, if made. The interests of justice and of sound business should be superior to sheer crusading for the apparent sake of crusading, no matter on whose account of political resentment or of political ambition the crusading may be waged.

Superintendent Hotchkiss Misunderstood.

It is unfortunate, in "The Chronicle's" opinion, that any portion of Superintendent Hotchkiss' "publicity statement" could have made the impression that he was in any way questioning the integrity of the members of this committee or their good faith in making the settlement. "The Chronicle" does not so interpret his language. Yet it might make and in-

deed has made that impression in many quarters.

To insurance men who have followed the course of life insurance affairs closely in recent years it will be obvious that the criticism of the superintendent is really directed against what now seems to him a purely one-sided and an unduly favorable statement as regards the McCurdy settlement. He means to say, then, that, with the other side presented, viz: that very large sums had to be allowed son Bob and son-in-law Thiebaut, the settlement, while doubtless the best that could be done, does not appear to be a matter for special rejoicing or self-congratulation. But if so, that is because the company's obligations to the younger members of the McCurdy family made a more favorable settlement, all around, impracticable.

SUPERINTENDENT LEMERT TURNED DOWN.

A bill introduced, it is understood, on behalf of Superintendent Lemert, which was intended to limit the capital of domestic life insurance companies to \$500,000 and to make all surplus earnings over a moderate dividend on the stock, the property of policyholders, has been reported unfavorably by the Ohio Senate committee.

A license has been issued to the Prudential Casualty of Indianapolis to do a general casualty business.

BIG PROMOTION EXPENSES.

The Wisconsin Department Scores Organizers of Old Line Life.

The report of the examination of the Old Line Life Insurance Company of America, with headquarters at Milwaukee, made upon its application to the Insurance Department of Wisconsin for a license to do business in that State, shows that of the total sum of \$1,001,526.70 paid in by subscribers, the sum of \$288,209.59 was not accounted for, and that the company could only show admitted assets of \$726,675.05. An inquiry into what has become of the difference disclosed the fact that, although several contracts had been entered into previously, they were all abrogated and re-executed on October 1, 1908, whereby Rupert F. Fry (the present president of the company), was employed by the promoters as an agent to sell stock, on a commission of 25 per cent. of the purchase price of all stocks sold, which commission was to be deducted from the first payments, while the company was to bear all other expenses incurred in the sale of the stock, the 25 per cent. being net to Mr. Fry. Under this contract, there was paid to Mr. Fry, as general agent, \$265,512.99; and of this sum, he retained \$54,247.69 for himself. In addition, it appears that he received, as sub-agent's commission, \$4,281.81, and still claims a balance of \$7,054.68, general agent's commission, making his net personal income from May 23, 1908, to February 19, 1910, \$65,594.18. Sub-agents were employed by Mr. Fry on a basis of 20 per cent. of the subscriptions. Their commissions amounted to \$210,191.05. There are claims against the company on sub-agents' and general agents' commissions amounting to \$39,059.88 on uncollected subscriptions, which will make, if they are paid, total commissions upon the sale of stock \$304,572.80.

Fry's Resignation Called For.

Commissioner Beedle, in an open letter to the stockholders and officers of the company, calls for the resignation of Rupert F. Fry as president and director. He says that the money used by the organizers was without authority or right, and that "it is for the directors and stockholders to determine what part of this, if any, the organizers should be permitted to retain." He adds:

The board of directors may, and on the demand therefor by any stockholder should, prosecute such legal action as may be necessary for the determination of the rights of the company to the money withheld by

the organizers and to collect any sum due the company.

It is apparent, he states, that the stockholders were paying a commission of 48 per cent. on the par value of their stock "for the privilege of paying their money into a corporation yet to come into legal existence, without any benefit derived from such payment and without any obligation upon the organizers after the corporation should be organized."

Contract Not Binding on the Company.

Concerning the contract entered into between the eighty dummy incorporators of the Old Line Life Insurance Company and Fry, the report says:

It is plain that the subscribers had no knowledge of the terms of any of the contracts between Mr. Fry, as agent, and Mr. Fry and his associate, as organizers. Such secret agreement, in our opinion, was a fraud upon the subscribers to stock in so far as it attempted, without their knowledge, to give to Fry and his associates, for any purpose whatever, any part of the money paid by them on their subscriptions.

Any attempt on the part of such organizers to appropriate any part of the funds collected for the payment of commissions or for any other purpose was entirely ineffective in the absence of any agreement therefor in the subscription contracts made by the subscribers for stock. As the contracts for subscription all purport to be made with The Old Line Life

Insurance Company of America, it would appear to be evident that any agency contracts would be of no effect as far as that corporation was concerned prior to its coming into legal existence. It would appear to be equally plain that in the absence of any agreement in the contracts of subscription for the payment of any part of the subscription price to any other party, the organizers would hold all funds so paid, as trustees, pending the completion of the organization.

Capital and Surplus Ample.

In commenting upon the statement of assets and liabilities, the commissioner says that "the manner in which this company has been promoted, cannot be too strongly condemned, but in view of what has been stated and of the interests of innocent stockholders, the withholding of the company's license may not be justified, and such license has been granted."

He also says:

The capital and surplus are now ample to protect future policyholders, though it should be noted that, as this is a stock company doing a non-participating business alone, it is absolutely within the power of the company management to use for the expenses of securing new business as much of the stockholders' surplus as they please.

The assets and liabilities of the corporation found and determined by the department as of February 19, 1910, are as follows:

ASSETS.

Ledger Assets.

Mortgage loans on real estate, first liens.....	\$212,306 50	
Book value of bonds.....	377,317 15	
Cash in company's office.....	\$300 00	
Deposits in trusts companies and banks on interest.....	\$136,751 40	137,051 40
Total ledger assets.....		\$726,675 05

Non-Ledger Assets.

Interest due and accrued.....	\$9,060 60	?
Due from organizers.....	288,209 59	\$297,270 28
		\$1,023,945 38

Deduct Assets Not Admitted.

Due from organizers.....	\$288,209 59	\$288,209 59
Admitted assets.....		\$735,735 74

Liabilities, Surplus and Other Funds.

Capital stock.....	\$552,348 66	
Unassigned funds, surplus.....	183,387 08	
		\$735,735 74

I notice that a number of agents are making changes from the Companies they were formerly with to other Companies. Also, that none of these agents have been in correspondence with the Philadelphia Life. Perhaps it is due to the fact that they do not read our advertisements, and I think that it would pay the agents, whether they are working for this company or not, to read these advertisements, as many a time there appear in the advertisements little arguments that would help them to secure business. For instances:—How many agents to-day are using the argument that they are insuring income, which is really what you do on every policy that you have caused to be issued by a Life Insurance Company? Now why don't you get in touch with the new up-to-date income policy of the Philadelphia Life that is different in all details from that issued by any other Life Insurance Company? Write Perry to-day.

NEW FRATERNAL INSURANCE BILLS.

On the 19th inst. two new bills were offered in the Senate and Assembly at Albany, one being an amendment to the fraternal insurance laws taking away from existing fraternal insurance societies the power to issue contracts, promising a cash payment in event of disability, and the other amending the penal code so as to provide for the punishment of officers and trustees who resign their positions for a consideration. This is hereafter to be a criminal breach of trust indictable as a felony if the amount received exceeds \$500, and as a misdemeanor if the amount received is less than \$500.

In 1903 the legislature amended the fraternal laws, so that no new societies could be organized with the power to make cash payments to living members, and also made the same applicable to all existing societies which were not making use of the power. The bill, which it is now proposed to enact, takes away the power even from societies which have been exercising it. So far as it affects the so-called "endowment bond" or "five-year dividend" schemes, such as have been operated by three or four societies in the State, the measure is certain to be approved on all sides; but the question is asked if the matter is not being approached in the wrong way, and if, instead of prohibiting a function which may be desirable, convenient and even necessary in the development of fraternal insurance, provision should not instead be made for ample reserves to protect all such agreements, such reserves, likewise, to constitute a trust fund and be applicable only to the fulfillment of such contracts.

While there was occasionally some sharp flashes of opposition or sarcasm during the debate it was conceded by both sides that the sessions had been educational, and that notable advances had been made in understanding of the problems confronting both the fraternal managers and the regulatory authorities.

Charles E. Piper, former president of the National Fraternal Congress, who took an active part in the discussion, said after adjournment:

I think the meeting has been very helpful, and the things have been freely conceded that would have been strongly opposed a few months ago. What the fraternal need is adequate rates, conservation of funds, valuation and publicity and proper supervision. With valuation and publicity the rate problem will take care of itself. The commissioners want the same things and a ground of agree-

ment will ultimately be found. No one expects that the bill, if agreed to, will be passed soon by any large number of States, but in the meantime the education of the membership in the essential features of the needed reforms is going on.

In New York.

Two bills suggested by developments in connection with the liquidation by the State Insurance Department of the Peoples Mutual Life Insurance and League of Syracuse were introduced in the legislature of New York at Albany yesterday. One is an amendment to the insurance law and the other to the penal code. Concerning the measures the Insurance Department says:

The officers of the Peoples Mutual Life Insurance Association and League, a fraternal beneficiary society, attempted to sell it last December to strangers, with the result that the Insurance Department stepped in and has recently been ordered to liquidate. The business of this society consisted wholly in selling to its members a so-called insurance contract, the chief and attractive feature of which was an agreement to pay not more than a specified sum in the nature of an endowment benefit at the end of five years. This contract was sold by agents on the representation that at the end of the period certificate holders would receive two dollars for one, this on the theory that a large number of members would drop out and persistent members profit accordingly. The contract therefore appealed strongly to the gambling sense and was essentially of a financial rather than an insurance nature.

Endowment orders which secured members through contracts of this kind were, against the protest of the Insurance Department, formally recognized when the insurance law was codified in 1892. In 1903 the department urged an amendment to the law which, if adopted, would have prohibited the further issue of such contracts; but the legislature of that year was unwilling to go further than to prohibit such contracts save by orders already issuing them. As a result, three beneficiary societies have since then continued to write these contracts and have greatly increased

their membership thereby. One of these is the Peoples Mutual Life Insurance Association and League, now in liquidation. The other two have recognized the mathematical fallacy behind this contract and have ceased to feature it. Their agents, however, continue to represent to prospective policyholders that a modified contract involving dividend payments after a fixed period will result in large returns, and thus, in the judgment of the department, are continuing a deception on which the phenomenal growth of such orders is based.

A further continuance of this class of so-called insurance business is thought to be against public policy. Hence the first of these bills, which were introduced by Senator Grattan and Assemblyman Allen, proposes an amendment to section 235 of the insurance law so that after January 1, 1911, fraternal beneficiary societies will be prohibited from making a contract for the payment of money upon the expiration of a fixed period in case a death loss has not been incurred before the expiration of such period.

The second bill is one prepared by District Attorney Bond, of Onondaga County. When the Insurance Department took possession of the Peoples Mutual Life Insurance Association and League authority was sought for indictments against the officers who had disposed of their positions for large considerations paid by a stranger. No warrant for criminal proceedings was found in the existing law. The bill referred to, which was introduced by Senator Grattan, of Albany, and Mr. Walters, of Syracuse, and has the emphatic support of the Insurance Department, will make such conduct on the part of the trustees or directors of fraternal beneficiary societies a criminal breach of trust, indictable as a felony, if the amount received by such an officer exceeds \$500, and as a misdemeanor if the amount so received is less than that sum.

The Preferred Accident will shortly announce issuance of a new general disability policy, the life, limb and weekly indemnity benefits of which will be increased a flat 20 per cent. over the indemnities now paid. For this new contract \$65 instead of \$60 per annum will be charged.

THE BESOM COMING.

When Superintendent of Insurance Hotchkiss, of New York, began his examination of the Phenix it was probably not even remotely suspected where it would lead him. To date its progress has reached into the very heart of both houses of the legislature and the political mechanism of the State.

Strenuously as the presumably guilty grafters in the legislature fought the resolution to turn the results of the insurance inquiry, so far as it had gone, into the higher leads and put the rascals on the grill, instead of their victims, the decent element rallied a majority in favor of it and now the harried and heckled insurance companies may hope for at least a brief surcease from being held up as arch conspirators, bribers and double-dyed rascals, and the eminent and honorable gentlemen of the legislature, "clients" of the recently self-expatriated-to-Canada, "Honorable" William H. Buckley, "speaker" for the "third house," Albany, N. Y., for the benefit of his health, will now have every opportunity afforded them to emulate the example of the Pittsburg grafters and come forward for confession and an immunity bath, or risk a change of tailors for a few years.

It is the general impression that it will be made clear and distinct that these human hyenas have preyed upon every decent and legitimate business interest within reach of their omnivorous fangs and claws.

A New Aspect.

An indication of the entirely new turn the investigation has taken is afforded by the following excerpts from the "New York World," of last week, referring to the commission appointed to investigate legislative and political graft and other matters of public interest:

The sessions will be public, its work will be done in the open and there is no great danger that any member would care to risk his political life or private reputation by endeavoring to suppress the truth. The same power of public opinion that compels the appointment of the committee will insist that its work be thorough.

It can investigate "any matters which in the judgment of said committee warrant an investigation," and this is exactly what the State expects of it. Neither Democrats nor Republicans should be spared; nor State committees; nor campaign-fund collectors and contributors; nor the buyers and sellers of legislation; nor lobbyists; nor the relations of law-makers to Wall Street; nor any form of dubious or corrupt political activity which affects the general welfare of the State.

The people of New York want to know the truth about their govern-

ment and they do not care who is helped or harmed by it. They are tired of having rascals protected in the name of Republicanism or Democracy. They are tired of graft and corruption in the name of political principles.

The same insistent sentiment that twice elected Mr. Hughes Governor is back of this demand for an investigation. It is the same sentiment that so enthusiastically supports Mayor Gaynor in his efforts to establish honest, efficient administration in New York City. **There can be no excuse for any intelligent man's mistaking the meaning or purpose of this sentiment.**

When this committee gets busy the people of New York expect it to do its work fearlessly and searchingly and honestly to the end that its investigations will mark the end of an epoch in State politics and the beginning of a new era. New York wants more of the Hughes kind of government, more of the Gaynor kind of government, and that is the kind of government it is determined to have. The function of this committee is to help establish it, both by exposing corruption and by making plain what should be done further "to prevent corrupt practices to influence the course of legislation within the State of New York."

Clean house!

Serious or Cynical?

Yesterday's press dispatches from Albany state that Senator Kissell, of Brooklyn, has introduced a bill to provide for a commission of six to inquire into everything in or out of sight in the legislature for the past few years, ignoring all statutes of limitation. Tuesday's election at Rochester has shaken all the political

machines, of every construction, from center to circumference, and it seems that something will have to be done.

The bill provides that that something shall be a commission composed of Theodore Roosevelt, Governor Hughes, ex-Governor Odell, W. F. Sheehan, ex-Governor Hill and William Randolph Hearst, to investigate and report upon what changes in laws or what new laws shall be made to prevent corrupt legislative practices in New York State.

The commission must report on or before February 1, 1911. It is empowered to investigate all evidence of corruption which was shown to exist by the evidence in the recent Allds investigation; also, all charges that have developed in the Hotchkiss investigation of insurance corporations.

Each member of the commission, except Governor Hughes, is to receive \$100 a day for each day actually in attendance at sittings or in preparing a report. The sum of \$100,000 is appropriated to carry out the provisions of the act.

"My purpose in naming prominent men on my commission is to make sure that there will be an investigation at the hands of well-seasoned officials who are up in statecraft," said Senator Kissell. "The people of New York State, as soon as they read the names of these men, will know they mean business. There will be no loophole of any kind. I shall push my bill regardless of the investigation resolution just passed by the Senate."

IN NEW ENGLAND.

The Rationale of Fire Insurance Rating—Why Rates Are Raised and Why They Are Reduced.

Following the San Francisco conflagration of 1906 a 15 per cent. advance in rates was ordered on buildings and contents in the congested district of Boston. Later in the year this advance was rescinded on all fireproof buildings and on all sprinkled buildings in that district, to date from January 1, 1907.

Recently one of the largest insurers in one of the old established agencies of Boston inquired of the gentleman who conducts it if it would not be timely and just to take off the 15 per cent. advance from second-class buildings and contents as well. The agent in question put his reply on paper, and it is so just and intelligent a presentation of the case and is of such general applicability that "The Chronicle" takes pleasure in presenting it to its readers, as follows:

The abrogation of the 15 per cent. advance from all fireproof buildings and all sprinkled buildings in the congested district was effected in order to encourage firstclass or fireproof construction, and also sprinkler and kindred equipments, that would tend to make the city more secure against conflagration hazard. It was felt that if the entire congested district, or the greater portion of it, were of fireproof construction or equipped with automatic sprinklers there would be practically no conflagration hazard.

The insurance companies know from their experience that, in all cities composed chiefly of second class buildings, there is a conflagration hazard, which should be paid for by the owners and tenants of the buildings in the conflagration district, and not by those outside of such district. Their experience in Chicago, Boston, Baltimore, Rochester and Toronto have convinced them that in all large cities there is a chance in a period of years that if a fire starts in a second class building, there is a possibility of it getting beyond the control of the fire department, and of a conflagration thereby resulting. The remedy for this advance in rates in second class constructed buildings is in the hands of the owners and tenants of the buildings. Immediately upon the installation of a sprinkler equipment in any second class building the 15 per cent. advance is at once rescinded. This would apply not only to sprinkler equipments with two sources of supply, but also to sprinkler equipments with only one source of supply where there is high pressure, the one source of supply being from the water main on the street. A reduction of from 30

to 50 per cent. is allowed for sprinklers, according to equipment.

The rates are made by what is called "schedule rating," starting with the rate on a firstclass building without being occupied, adding to the rate on the particular building, making charges for what is not up to the standard of the so-called firstclass building, and also making reductions where the particular building is better than the so-called firstclass building, so that each building and its contents are rated by the schedule on its merits, first as to the building and afterwards as to the occupancy. There is no favoritism; everything is figured justly on the merits of the building and its occupancy, and the way it is kept.

There are also other ways of having a lower rate, even on the second class buildings. In many of the older buildings in the congested district the ceilings and inside walls and partitions are made of wood and painted instead of being lathed and plastered. A reduction could be made on this by using fireproof paint instead of the ordinary paint. Some of the buildings have mansard roofs, which, if fireproofed, would permit a material reduction in rate on building and contents. Many of the second class constructed buildings are occupied on the first floor by retail dealers and above by various tenants, some of them doing light manufacturing and other hazards, which increases the rates to the retail dealer on the first floor. Some of the improvements to buildings which would affect the tenants are exceptional construction; tin or sheet iron between floors 3 cents; waterproof paper between floors 1 cent, floors waterproof and inclined, to take off the surplus water, 5 cents; grade floor, fireproof, 7 cents; each additional floor fireproof, 3 cents (not exceeding 25 cents in all).

Regarding the contents: If the merchandise is covered with tarpaulins each night a reduction from 3 cents to 7 cents is made; merchandise on skids or platforms six inches high, 1 cent to 3 cents; stock exclusively on grade floor, 3 cents to 7 cents; stock exclusively on grade and basement or second floors, 1 cent to 4 cents.

Of course there are other faults or management easily corrected. Sometimes where an extra charge is made for defects the rate would be lower if they were remedied; also there are defects in construction which might easily be corrected, which do not show on the rate cards, but are charged for in the schedule. These might be looked into by the broker placing the risk, and sometimes a substantial reduction in rate is made if these defects in construction are remedied.

If an owner of a building or a tenant propose to make a somewhat extensive change in the building to suit their business, it would be well before making these changes to consult the Boston Board of Fire Underwriters, as they have experts who give suggestions as to the making of changes, so that the risk would be improved after the alterations and the rate would be lower than if carried out without this expert advice. Of course each risk has its own individuality and has to be treated in ac-

cordance therewith as to construction and occupancy.

You will see the fairness of the Boston board in rescinding the 15 per cent. advance on the so-called fireproof and sprinkled risks when comparing the different classes of construction.

Some few years ago a fire occurred in a room in the Jeweler's building, on the corner of Washington and Bromfield streets, the building being occupied by a large number of tenants. The building is of firstclass construction, and the partitions of the different rooms are made of terra cotta. The fire in question was confined to the room in which it originated, and was quite severe, causing a loss of 65 per cent. on the contents of the room, but not causing practically any loss to the other tenants. The loss to the building was very slight. On the 5th of March, this year, a fire occurred in the New England building, on Summer street extension, opposite the South Terminal Station. The walls and outside of this building were well constructed, but instead of using terra cotta partitions, or even lath and plaster partitions, the partitions of the small rooms into which this building was divided chiefly used for wool samples (nothing hazardous), were hard pine varnished, and the result of this fire was that from the third floor upward the stocks were in most cases entirely consumed. The partitions in all the floors were burned down, and most of the insurance on the tenants was a total loss. The loss on the building was adjusted at a little rising 70 per cent. Had this building been of fireproof construction the probabilities are that the fire would not have gone beyond the room in which it started.

This is one of the many examples (although, perhaps, somewhat extreme) of the difference between ordinary and firstclass construction.

Shortly after the San Francisco fire most of the insurance companies reduced their block lines in the congested district, some of them as much as 50 per cent., making it difficult to get all the insurance that is needed in admitted companies on unprotected risks in second class buildings in the congested district. Up to the present time they still maintain the same position, not increasing their holdings in the district in question.

Until they regain confidence and increase their lines, would it be wise to attempt to have the 15 per cent. advance on second class buildings and contents rescinded?

Smoke Talk of the B. L. U. A.

The members of the Boston Life Underwriters' Association gathered in force at Young's Hotel last Friday afternoon to listen to the message of Mr. Whittington, of Los Angeles, president of the National Association, and were well repaid by the forceful address of that gentleman. He expounded, in convincing terms, the value of the association work, and did not deal in glittering generalities, but backed up everything he said with specific instances. He extolled the life insurance salesman as the real salesman, the man who sells people

what they don't want. Compared with that the work of the dry goods or grocery salesman, who supplies his customer with the stock of what he is getting low on, has an easy job. Mr. Whittington had a good word for section 97 of the New York law, which, he said, had done more to place good laws on the statute books all over the country than any other force. He instanced how in Colorado the work of the local association had resulted in the enactment of good insurance laws, and related similar experiences in Utah and Oklahoma. He was not able to give so good a report of his own State, California, but showed how energetic efforts by the Los Angeles association had headed off the imposition of a burdensome tax in that city. It was a fact that the local association were making history and upholding the high spirit in the business, and the companies ought to recognize that fact. Mr. Whittington's genuineness and sincerity impressed everyone present, and the life insurance men of Boston will long remember his visit, which ought to prove stimulating and helpful in the local work.

Massachusetts F. & M. Selects Walter Adlard as Secretary.

Walter Adlard, of Boston, for over ten years identified with and in charge of the field work of the Continental in Eastern Massachusetts and Rhode Island, has been selected to be secretary and managing underwriter of the newly organized Massachusetts Fire and Marine Insurance Company. He will assume the position on June 1, at which time the company expects to begin active operations. Mr. Adlard was born in Brooklyn, not quite 44 years ago, and began his underwriting work in the New York office of the Queen. Advancement came to him in due course, and he was appointed special agent for New Jersey and Long Island in 1893. In the following year Mr. Adlard was transferred to New England as assistant special agent. In 1899 he became special agent of the Continental, in whose service he has gained distinction by reason of his sterling qualities as a man and an underwriter. The Massachusetts Fire and Marine is to be congratulated on securing his services. This new company is to start with a capital of \$500,000 and a surplus of equal amount, and nearly \$800,000 of the combined sum has already been secured. Colonel E. C. Benton is president of the company, James J. Storrow is vice-president, and the directorate comprises an array of names prominent in the leading business interests of New England.

Cincinnati Secure Control of Hartford Life.

A controlling interest in the Hartford Life Insurance Company has been secured by a syndicate of Cincinnati capitalists, headed by John G. Hoyt, through the purchase of the stock of President George E. Keeney. The capital stock of the company is \$500,000, and the purchasers have acquired a majority thereof. President Keeney will for the present remain at the head of the company, and it is stipulated in the agreement that the general organization of the company shall not be disturbed.

Surety Companies Sued.

Suit has been brought in the Superior Court at Boston by the Museum of Fine Arts against the Illinois Surety Company, the Peoples Surety Company and the American Bonding Company to recover the proportionate share of each defendant as surety on the bond of Ambrose B. Stannard, who had the contract for building the Art Museum. The plaintiff claims that it had to finish the work. The cost price was \$1,162,163, and it had to pay out in excess of that \$70,782. The plaintiff seeks to get the amount it had to pay to complete the job in excess of the contract price. It had to complete the work because the contractor failed so to do.

Thompson Enjoined.

A press dispatch from Hartford, of last Saturday, relates that the suit of Charles E. Shepard & Co. against William L. Thompson, which has been pending in the Superior Court a long time and in which an injunction and \$40,000 alleged damages were sought, has finally been terminated. Judge Burpee has enjoined Thompson from engaging in the life insurance policy brokerage business in Connecticut, under penalty of \$5,000, before February 20, 1911.

Shepard and Thompson were partners in the business of buying life in-

surance policies. The partnership was converted into a corporation, and there was a condition that neither one could engage in the business on his own account for a period of five years. Thompson retired, and Shepard & Co. subsequently brought suit against him on the ground that he had violated his agreement.

New England Brevities.

W. L. Beers, fire marshal of the city of New York, will address the final meeting of the Insurance Library Association of Boston for this season, which is to take place at the Exchange Club to-morrow evening. Mr. Beers' topic will be "Trailing the Fire Bug."

Wednesday of this week was the final day set for the presentation of reports by the Massachusetts legislative committees. The time has been twice extended.

Herbert Damon, of the Boston firm of Field & Cowles, with his sons, sailed for a tour in Europe this week.

At an insurance dinner in Boston the words of a number of songs appeared on the dinner card, and this is how one of them was set up:

"Max Welton's braes are bonnie."

Max Welton's braes may be bonnie, but they haven't got anything on Max Cohen's "Views." This reminds one of the intellectual compositor who couldn't stand for the supposed abbreviation of "Mozart's Twelfth Mass" on a musical program, and fixed it up to read "Mozart's Twelfth Massachusetts."

The New England Insurance Exchange last Saturday adopted a tribute to the late Mark Buxton, for many years the efficient and popular special agent of the Granite State Fire.

The number of non-affiliating fire companies in Illinois is increasing, thirty-seven now being listed in that class.

THE FIDELITY & CASUALTY COMPANY

INSURANCE COMMISSIONERS COMMITTEEING.

The fact that the committee of insurance commissioners investigating the expenses of fire insurance companies, and other committees, were in Chicago this week, did not cause much of a stir on La Salle street last week, possibly because most of the managers were at the union meeting in Washington. This expense subject has been discussed so much and so many of the facts about it are known—or at least supposed to be known—that it is rather the question of doing something than of learning that it is of chief interest now.

Other committees which met during the week are: The committee on fraternal insurance, committee on examinations, executive committee and the committee on laws and legislation. Commissioner Hartigan of Minnesota, president of the National Convention of Insurance Commissioners, sent notice of the meetings to all the commissioners, urging them to be present, if possible, as very important matters will come up for consideration.

The following changes have been made in the standing committees of the National Convention: Samuel W. McCulloch, Pa., vice Thomas B. Love, Texas, on committee on laws and legislation; George Graham, Jr., Ill., vice A. G. Hann, Col., on committee on blanks; Milas Lasater, Okla., vice T. J. McComb on committee on assets of insurance companies; Frank Blake, Mo., vice John Kennish, and Samuel W. McCulloch, Pa., vice David Martin, on committee on reserves other than life; Frank Blake, Mo., vice John Kennish, on committee on miscellaneous; Samuel W. McCulloch, Pa., vice David Martin, on committee on unauthorized insurance; Joseph Button, Va., vice Thomas B. Love, Texas, on committee on fraternal insurance; Samuel W. McCulloch, Pa., vice Thomas B. Love, Texas, and W. E. Hawkins, Texas, vice T. J. McComb, Okla., on committee on fidelity and surety companies.

Fraternal Life Insurance.

The committee on fraternal insurance began consideration of that subject on Monday with all the leading societies and orders present, representing approximately \$9,000,000,000 of insurance.

It was in evidence that fraternal insurance largely represents the protection of working men, and because it is usually the only insurance the members carry the State authorities are anxious that it shall be safeguarded in every way possible. The rates charged by many orders are inadequate

to carry out their contracts while sufficient to meet current death claims, and the principal point insisted upon by the commissioners is the collecting of an adequate rate. The fraternalists concede this, but so far have been unable to agree to the basis of circulation and the details of reserve, extended insurance and other incidentals of increased rates.

The tentative bill was taken up section by section after it had been made plain that it was not to be considered as binding, since the changes made at this meeting will be submitted for general consideration and taken up at another session of the committee. Proxy voting was prohibited and other safeguards of control by the members were inserted.

The principal discussion was over the changes proposed to make it easier for societies desiring to get on the adequate rate basis to take care of their older members, and it was urged by the commissioners that no liens should be imposed without notice to the members. The section covering this was redrafted.

This committee is composed of J. V. Barry, of Michigan; C. C. Lemert, of Ohio; T. H. MacDonald, of Connecticut; J. R. Young, of North Carolina, and E. J. McGivney, of Louisiana. Several of the other committees are in attendance. The executive committee of the National Convention of Insurance Commissioners met yesterday and the committees on examinations and on laws and legislation will meet to-day and to-morrow.

An informal session of the committee on fire expenses was held yesterday, the formal hearings to begin at 11 o'clock to-day. O. B. Ryon, special counsel for the Illinois Insurance Department, gave the committee a summary of the information secured by the Illinois Fire Insurance Commission, which has taken up the question of expenses as well as rates. To-day testimony will be heard from P. D. McGregor, of the Queen; C. R. Tuttle, of the Continental; E. G. Halle, of the Germania; J. H. Lenehan, of the Fidelity-Phenix, and Harry Fox, of the Milwaukee Mechanics.

The committee made it plain that it is merely seeking for information upon which a report may be formulated, and has no antagonistic motives. Some of the members, however, have very pronounced views on excess commissions, incompetent agents, preferred business, undue extension of the brokerage system and other evils of the business, and will seek light on these points. The committee several months ago sent a list of questions to the companies bearing upon the matter of agents' com-

Address of Commissioner Barry at Luncheon of Chicago Board.

The April luncheon of the Chicago Board of Underwriters held yesterday at the La Salle Hotel was made unusually notable by the presence of the State insurance commissioners. James V. Barry, of Michigan, former president of the National Convention of Insurance Commissioners, was the speaker of the day, and the guests included John A. Hartigan, of Minnesota, the present president; T. H. MacDonald, of Connecticut; Joseph Button, of Virginia; Frank H. Hardison, of Massachusetts; Charles C. Lemert, of Ohio; Reau E. Folk, of Tennessee; Samuel McCulloch, of Pennsylvania; Henry D. Appleton and Nelson B. Hadley, of New York, and W. S. Tift, of Minnesota. Charles Nelson Bishop, president of the Chicago board, acted as toastmaster.

Mr. Barry, who has a notable reputation as an after-dinner speaker, wove a lot of good stories into some sound advice for the insurance interests. He urged that the companies take the lead in correcting the evils of the business, rather than delay action and compel the States to reform abuses by law. He held that the reduction of the fire waste was the most important question before both the insurance companies and the public, and should be encouraged in every possible way, and declared that the solvency and ability of the companies to fulfill their contracts was more important to the public than ill-considered reductions in rates at the expense of solvency.

WHOSE SURPLUS IS IT?

The hearing of the suit brought by Leon Blanchard, to compel a division among the stockholders of the Prudential Insurance Company of surplus funds amounting to \$16,000,000 will be resumed in Newark, N. J., to-morrow.

It is said that no matter what the decision, it is certain that the case will be carried to the highest court. Joined with Blanchard in the suit are the additional stockholders representing about 8,700 shares out of a total of 40,000. Although the plaintiffs represent only a few of the stockholders, it is no secret that there are many others who would be glad to see them succeed. The majority of the stock is owned by the Fidelity Trust Company of Newark, and it is generally understood that John F. Dryden, president of the Prudential, and other members of his family own the ma-

jority of the stock of the Fidelity. The Prudential's capital is \$2,000,000 and dividends of 10 per cent. are paid on the stock. The price of the shares has gone as high as 800, and it is said that even higher figures have been paid by some of the parties to the suit. The present quotation is 550.

This is practically a contest between policyholders and stockholders. Within recent years the active management of the company has considered that the surplus is much larger than is necessary to safety and it has been the practice to return to the policyholders various portions of it, and this is the issue now joined.

LIFE INSURANCE IN MEXICO.

H. E. Bouchier, who is director-general for the Mutual Life Insurance Company of New York, in Mexico, is at the Imperial, and he says that Mexico is about to adopt laws governing insurance.

"They have never had insurance laws in Mexico," said Mr. Bouchier yesterday. "In fact, the life insurance business down there was not important until a few years ago. Now they are preparing a new code for life insurance, following out the line of the present finance minister's idea of putting everything on a sound basis. There are now four New York companies, two Canadian and three Mexican companies doing business down there. The fire insurance companies are mostly English, though there are a few German and American.—"New York Commercial," Tuesday.

James Dwight Orne has been appointed superintendent of the liability department of the Prudential Casualty Company of Indianapolis. Mr. Orne for the past six years has been assistant manager of the liability branch of the General Accident, prior to which time he was with the Ocean Accident. He will resume his new position on May 1.

A COMET AND A TALE.

Chicago (Special).—The Associated Press furnished the afternoon papers of Chicago some juicy news last Friday when it gave part of Actuary Roche's report on his examination of the Consolidated Casualty for the West Virginia department. Out of the "graveyard" was resurrected the much used picture of the "former Assistant Secretary of the Treasury," and it was made to do service once more.

Mr. Roche's report certainly gives some men in Chicago ground for saying, "I told you so." The opposition to the Consolidated Casualty was not due to any great extent to fear that it was going to be a competitor, but to the belief that it was a "con game" designed to fleece the public and destined to bring disgrace to the casualty business and to Chicago. Nearly, or quite, every new development so far has added proof that those who thought these uncharitable thoughts were sound in their upper stories.

The one praiseworthy thing the company has done in its short but spectacular career was to "can" the crowd responsible for its misfortunes and disrepute and install as general manager a man who has had as much of a hand as anybody in exposing to the public gaze what they were doing, viz.: J. W. Scherr, Deputy Insurance Commissioner of West Virginia.

Mr. Armstrong, the deposed president, who is accused of looting the company, is out with a statement in which he takes emphatic issue with the examiner's report. He says he has been the victim of a plot and a horrible conspiracy. His ability as a high roller and money spender (and some folks even suggest "four-flusher") enters not into his computation. His juxtaposition to millions of Uncle Sam's sound dollars of the realm during his incumbency of a plush chair and highly upholstered office in the Treasury at Washington, with automobile auxiliaries, must have created by familiarity a contempt for money that developed his financial genius to the point at which he spent \$100,000 cash to secure a premium income of \$13,000.

In his statement the doughty Robert says in part:

Armstrong's Denial and Defiance.

"The report reflects the hostility which the company has encountered from its inception. For practically two years there has been apparently an organized effort to assassinate the company. These guerilla methods of the competitors of the company were

encountered on every hand and enormously increased the expense of organization. I have been warned scores of times in the last two years that the Consolidated and myself would be put out of business.

"The president of one surety company, member of the Surety Trust, told me that the only hope that the Consolidated had in continuing in business was to join the Surety Association, otherwise known as the Surety Trust. More recently I have been warned that the failure to maintain rates would mean annihilation of the Consolidated. This warfare of combined interests on the Consolidated prevented it from being licensed in a number of States where it had spent money and time to secure stockholders and a complete agency organization.

"Temptation has been very strong during the last year for me to throw up my hands and abandon the company. I have stuck to the task, however, as a matter of duty to the stockholders. I have not benefitted in any respect from the two years' work which I have given to the company, a large part of my salary being spent in the expenses necessary to the organization of the company. There has been nothing to my knowledge in the conduct of the company that has been irregular. If mistakes were made they were mistakes of judgment and such as usually come in the organization of a new proposition.

"The statement is untrue and misleading in many particulars. Without having access to the records, I should say that the item of income was approximately correct. The impression is given that the assets of the company have been dissipated until only \$191,000 remained. This is palpably untrue. The latter figure is arrived at by scaling down values and throwing out of consideration bank accounts and other good assets. The assets of the company are some place

between \$300,000 and \$400,000, and the difference between this figure and the income is represented by disbursements properly accounted for.

"That the management made false entries in the books of the company is also untrue, and likewise is the statement that false returns were made to the Insurance Department of West Virginia. Incorrect entries on the books when discovered were corrected, and in regard to the item of \$2,312 referred to as an overdraft on my salary, I desire to say that this is composed of a number of items of expenses incurred by me and incorrectly charged to salary, and afterward correctly entered as it should

bc, in miscellaneous expenses, this amount being used in traveling and other necessary and proper expenses in the organization of the company."

The Commissioner Has a Word.

This is interesting in view of the official memorandum just furnished "The Chronicle" by Insurance Commissioner Darst, of West Virginia, in which he says:

"Notwithstanding the deplorable condition in which the Consolidated Casualty Company was found when the department first took charge of the books and records of the company, I am glad to announce that through the prompt and vigorous action of the directors the company has sufficient funds remaining with which to continue in business. Criticism of the former management cannot be put too severely. It is doubtful if anything in the history of the insurance business, from a standpoint of extravagance, can approach what has been revealed in the examination of this company.

"Our examiner very properly threw out of the assets everything of a questionable character and reported only that which the company is in actual possession of, and I am, therefore impressed with the belief that it is more than probable that with proper management a considerable sum can be realized from the non-admitted assets. The stockholders of the company at its meeting on the 11th inst. took the necessary legal steps to reduce the capital stock from twenty-five dollars per share, par value, to ten dollars per share, which leaves the company in actual possession of one hundred and forty thousand dollars capital and a net surplus of \$51,617.54. Upon this showing and not taking into consideration any of the items not admitted in the examiner's report, upon which the company expects to realize, I have licensed the company to transact the business of accident and health insurance in this State. The company has placed on deposit with this department approved securities amounting to one hundred thousand dollars for the protection of its policyholders.

"As to the future of the company, I am of the opinion, judging from the personnel of the organization, that there is no reason why it should not take its place among the many reputable companies doing business throughout the country, and, with careful and economical management, meet with success.

"Mr. McChord, who has been selected as its executive head, impressed me as being a man of sterling integ-

rity, and his wisdom throughout the investigation of the company's affairs has convinced me of his sincere intentions to put the company on its feet. The board of directors is made up of men of large business affairs and is in a position to render inestimable service to the executive management in the upbuilding of the company.

"J. W. Scherr, who has been chosen as general manager, has been connected with the Insurance Department of the State for nearly twelve years. Mr. Scherr undertakes the task with a full knowledge of the company's troubled career and, consequently, must have faith in its future under the re-organization. His experience with the various phases of insurance matters and his wide acquaintance with the insurance fraternity, coupled with his reputation for conservatism, should commend him to the public with which he will have to deal.

"This department takes the position that honestly and wisely managed insurance companies should be encouraged, and I would not knowingly put any obstacle in the path which would retard the progress of a legitimate enterprise. I am thoroughly satisfied with the present condition of the Consolidated Casualty Company and its management."

The Pennsylvania Casualty Company, of Scranton, Pa., has completed arrangements with the Western Union Life of Spokane, Wash., to reinsure its accident and health policies.

SEEMS IN EARNEST.

About five years ago some leading progressive spirits at Chattanooga began the organization of a company, under the broad charter obtainable under Tennessee laws, to write the several lines of casualty and surety insurance. At that time the laws required a deposit for the special protection of the citizens of the State, and this provision, by the application of the retaliatory laws of other States, practically prevented a company operating outside the State. This served to kill the project. However, the seed sown at that time seems to have borne good fruit, because the deposit requirement was afterward repealed by the legislature and since then several projects have been launched at Memphis, Jackson, Nashville and Chattanooga, as well as in the neighboring States of Georgia, Alabama and Kentucky, but the only one that promises any measure of successful completion is the latest, the Interstate Accident, of Chattanooga, which appears to be in the hands of highly reputable people, leading citizens of the Lookout City.

The leading spirit in the movement is H. D. Huffaker, general agent of the Central Union Life, who will resign July 1 to devote his entire attention to the development of the proposed enterprise. The capital proposed is \$200,000, but no provision seems to have been made for a working surplus and an article on another page of this issue, which refers to the handicaps of the small company, as evidenced by the experience of one in Philadelphia, is peculiarly applicable to this new venture.

The day of the single line company with inadequate capital and working surplus has passed, but Chattanooga has ample financial ability to make as big a company as those of New York, Baltimore or Hartford, now in practical control of the whole surety and casualty field. If the incubators of the enterprise have foresight sufficient to engage a high class of experienced managers and will realize that the only hope of success is in paying for brains, there is no reason why the undertaking cannot succeed under central direction from Chattanooga as well as one from New York or any other point.

The recent remarkable industrial and commercial development of the South, of which Chattanooga may properly be called the center, especially from a railway standpoint, and which is destined to continue for many years, affords ample assurance that a casualty and surety company on multiple lines and under compe-

tent management would find it difficult to score a failure.

"Lookout" Fitting.

If a tender of advice will be pardoned it is in order to suggest that the corporate title selected for the proposed company will be found a serious handicap when it enters the multiple casualty and surety lines, as it has announced its intention of doing.

Why not the "Lookout Casualty Company?"

WANTED: PEACE.

Burglary insurance men in Chicago report conditions satisfactory now. It is said that certain of the New York contingent have not yet gotten over being offended because the Chicago people settled the question there according to their own ideas instead of according to the program laid down in New York, and that two or three managers in Chicago have been obliged by their companies to withdraw from active membership in the conference. As they are not creating any disturbance, nobody seems to care much. The Chicago burglary insurance men want peace more than a compact.

A BIG MARINE LOSS.

The Minnehaha, of the American transatlantic liners, is still on the rocks off the Cornish coast of England. The "trust" carries its own vessel insurance, and the loss is sure to be a heavy one, even though the big steamer is pulled off the rocks of Scilly Islands, where she is now firmly wedged. The indications at the moment are that she will be a total loss.

The cargo is insured, but there is a good prospect that most of it will be salvaged. This, however, is largely contingent upon good weather conditions. Cable advices from Lloyds

indicate that a reinsurance policy, if issued at all, will be at a heavy premium. On Monday the premium was 40 per cent.

The Minnehaha sailed from New York on April 9. She was not built to make fast time, but is patronized by many who prefer a leisurely transatlantic voyage. She is considered one of the staunchest vessels of the line, and Captain Layland is regarded as a careful and experienced navigator.

The Minnehaha was built at Belfast in 1900 and registers 8,637 tons net. She measures 600.7 feet in length.

An ordinance has been passed to print by the San Francisco Board of Supervisors providing that the city shall pay the premium upon indemnity bonds secured by members of the Board of Public Works against the chance of their being held liable for damages claimed by persons suffering injuries through the tearing up of streets and other improvement work authorized by the Public Works department.

COURTING UNKNOWN SORROW.

A committee of the Chicago Board of Fire Underwriters recently sent a circular letter to members inquiring as to their views on the advisability of reducing rates on preferred business in consideration of the use of a co-insurance clause in policies on this class. For some reason not much has been said about the matter. What the committee will recommend to the board or whether it will recommend anything is not known yet. There is some sentiment in the board in favor of a reduction in preferred rates, but every time the question has been put to the test this element has proved to be in the hopeless minority. It is possible that there has been some change of sentiment of late. It would be a serious reflection on the intelligence of the membership of the Chicago board not to give it credit for sense enough to see that preferred rates and excessive expense in Chicago are the two questions, for the solution of which legislation is most likely to be invoked. Surely there are some agents in Chicago who are well enough satisfied with the present preferred rates who would prefer to make concessions to public sentiment rather than have the legislature attempt regulation.

1909 DIGEST READY.

The 1909 edition of the "Insurance Digest" is now ready for delivery. This is the twenty-second volume and it contains more matter than the preceding books, exceeding the volume for last year by 80 pages—fifty more insurance cases were decided by the courts of last resort during 1909 than during the year 1908.

The relation between the number of cases on the different kinds of insurance is well maintained year by year. In the book just published there are 195 cases on fire insurance questions, 155 on life insurance policies, 140 on fraternal, 59 on accident, 16 on marine and 113 involving miscellaneous insurance.

The "Insurance Digest" is published by The Rough Notes Company, Indianapolis; the annual volumes sell for the small sum of \$3.50, including the expressage. The reprinted set of of twenty volumes sell for \$36.00.

STILL COMING.

Three new surety and casualty companies are being projected in this city at the moment; at least the legal form of advertising their application for a charter is being complied with.

Their titles as set forth are: Independent Surety Company, Government Surety Company, and The Life

and Casualty Company of New York. There is also another advertisement running in which no name is given, a rather singular form of proceeding.

There is much speculation being indulged regarding these several companies. One rumor is that one of them is merely a "strike bill," aimed as a protest against present rates of surety companies by a number of prominent building contractors of this city. Another one is reported as being promoted by parties who have no practical knowledge of the surety or insurance business and without the aid of skilled legal advice and experience.

On the whole there is a lack of that which is calculated to inspire confidence in their ultimate reaching of the goal, but they indicate the very general and widespread interest in casualty and surety development.

CHICAGO NOT FULLY "TONED."

Chicago (Special).—The transfer of the center of insurance company promotion activities to New York is pretty tough on Chicago. Following so closely the removal of the Consolidated Casualty to Charleston, it looks as if Chicago was retrograding as an insurance center. The city still has the Midland Casualty, the Imperial Accident and a few more in the incubator, so it is not entirely without hope.

As a result of the recent fight of President Joyce, of the National Surety, the threatened demoralization of the local surety rate situation at San Francisco has been at least temporarily avoided. The trouble started from sharp competition between the Pacific Coast Casualty and the Pacific Surety. Both companies are members of the National Association and the whole matter will be brought up for adjustment at the next meeting.

UNITED INSURANCE, OF ARIZONA.

When the genius of New Jersey's legislature passed an incorporation act some years ago that has since afforded a volume of revenue from taxation that paid the State debt, debauched the membership, and earned the title of the "Traitor State," the monopoly was naturally destined to a short life and a merry one, as indicated by the closing scenes of the legislature last week.

Every other of the preying and grafting elements among the legal profession throughout the Union immediately took the cue and got into competition for the rich intake, a la the Dakota and Nevada "improved" divorce laws of to-day, as they were initiated and for long practiced by Illinois.

Not to be outdone a number of the States and even the District of Columbia, by act of Congress, set a new pace in incorporation liberality and inducement. Under exalted example it is not surprising that the Territory of Arizona, one of the finest regions in America, but populated entirely by voluntary and involuntary expatriates, should become infected by the microbe and enact a corporation law that went all the others several better. (Incidentally it may be stated that this has had much to do with creating a sentiment in favor of Arizona's claim to Statehood in order that the conditions created might be rectified under a State constitution.)

Under this omnibus incorporation act of Arizona, as it now prevails, a charter may be obtained that has not the slightest shade of limitation. It's to get the money. It was under this act of incorporation of the Territory of Arizona that Van Laningham obtained a charter for the United Insurance Company, the prospectus of which proclaims that it is designed to purchase all classes of insurance companies and "hold" them, eventually to own everything in insurance and to write all the insurance, not only of the United States but of the entire earth and the waters below it.

Now comes the United with an application to the Territory of Arizona for amendments to its already malodorous charter and its hopelessly discredited and disrated standing in reputable financial circles.

One amendment provides that Article 3 of the charter be amended by the addition of the following:

To subscribe for, buy, sell and deal in the shares of stock of the capital stock of other companies. To manage, operate and direct the management and operation of

any insurance company while the owner and holder of shares of the capital stock of such company, and to exercise all the rights and privileges of ownership, including the right to vote thereon.

Another amendment asked for is to Article 4 in the addition of this sentence:

The balance to be sold during the term of this charter at not less than par, to subscribers, for cash, or installments of cash, or subscribers' evidence of indebtedness convertible into cash, or installments of cash, and at such price or prices above par to ultimately accumulate a total surplus of \$40,000,000.

The application is made by Paul S. Knowles, vice-president, and attested by Stewart Goodrell, secretary, of Chicago, Ill.

Following this information comes from Chicago a dispatch:

Stewart Goodrell, vice-president of the United Fire, has transferred his headquarters from Chicago to New York. Secretary Knowles has charge of the Chicago office.

The United Fire Insurance Company of New York is one of the many subsidiary companies to be formed by the United Insurance Company of Arizona and it has already procured a charter in this State. Coincident with this announcement comes the information that Van Laningham has abandoned the promotion game in California, where he went a few months ago, and has returned to New York to resume his skilled and expert activities of hypnotizing the unsophisticated investor. Address: 100 William street, New York City.

B. St. D. Thomson, who has long been connected with the Chicago "Record-Herald," has taken charge of the advertising and publicity department of the Continental-Fidelity-Phoenix at the home offices in New York. Mr. Thomson has had much experience in that line and will be a valuable acquisition.

"The Leading Fire Insurance Company of America."

WHERE FRIENDSHIP CEASES.

Considerable bad blood has been stirred up by the affair at Lincoln, Ill. Agent E. F. L. Rautenburg has represented the Continental there for eighteen years. He also represents seven non-union companies. Recently State Agent McAnally of the Continental discovered that Mr. Rautenburg was copying the Continental's register. Mr. McAnally transferred the company to another agent and then canceled and rewrote the business at rates that would get it. He did not disturb the business of other companies in the agency, with the exception of a few policies of the Northwestern Underwriters' Agency.

As usual there are two sides to this question, as to all others. The Continental claims Mr. Rautenburg told Mr. McAnally that he would not represent any company that would not pay him more than union graded commissions, and Mr. McAnally holds that the fact that the register was being copied was sufficient evidence that the agent intended to strip the company's books.

According to what Mr. Rautenburg has told special agents of other companies he did not desire to lose the Continental, but would rather have kept it on a 15 per cent. commission scale than give it up. He admits that he was copying the Continental's register, as he wanted to be on the safe side in case the company should decide to leave him. He says he had no assurances that it would stay with him. He also charges Mr. McAnally entered his office in the morning before he got there, while the janitor was telephoning him to come down, and thus secured the information that the register was being copied. Mr. Rautenburg has sued the Continental and its State agent for \$20,000 for alleged conspiracy to ruin his business, and threatens to sue Mr. McAnally for trespass in addition. He claims that Mr. McAnally went to his customers, told them that he (Rautenburg) had overcharged them and that he (McAnally) was ready to take up the policy, give them a new one and pay them a return premium in addition.

Mr. Rautenburg is described by one of the other special agents as a dignified, inoffensive old German, who stands so high in his community that he is being prominently spoken of as a nominee for State Senator this fall. He is not a man of large means, and told his other companies that if they wanted to enter into any fight in the town they would have to do it themselves, as it would ruin him to have his business cut to pieces.

The belief exists in some quarters that the Continental chose Lincoln as the place where it would give warning to other agents of what they might expect if they undertook to switch the Continental's business because of its having entered the union.

Will Cause a Stir.

There is no doubt that this case will cause a stir among local agents who do not even represent the Continental, and have no personal interest in the case further than the generally established principle of ownership by the agent of the business on his books, and an appeal to rate-cutting to hold business for a company, are concerned.

Another feature of the case is the possibility of Mr. Rautenburg's being a member of the next legislature of Illinois. If he is a man of such standing as his friends claim, he will be the subject of much sympathy in his community. What one man in a legislature can do to insurance companies is well known in the West, as well as in New York. Blanchard, the father of the notorious anti-compact law of Iowa, was a local agent whom the State board disciplined. He went to the legislature and the companies have been paying reprisals for it ever since.

TUTTLE SELLS AGENCY INTERESTS.

Robert R. Tuttle has sold all of his stock in the Syracuse Fire Office, the corporation through which his local business in Syracuse has been transacted for the past fourteen years. He decided to take this step because his time was so occupied with the Protective Fire Insurance Company, the new Syracuse company of which he is to be general manager; also because the Syracuse Fire Office is a non-board agency and he desires for the Protective Fire the good will of all of the Syracuse agents. Should Mr. Tuttle re-enter the local business, a right to do which he has reserved, his business will conform with board rates.

Hartman & Thompson, representatives of the United States Fidelity & Guaranty in Portland, Ore., have been placing the bond for \$1,250,782 for the contractors who are installing the second Bull Run pipe line into Portland. The United States Fidelity & Guaranty takes \$500,000 of the bond and the Title Guaranty & Surety \$250,000, the rest being distributed among other companies. The contractors are the Shaw-Batcher Company of Sacramento, Cal. The first premium on the bond is \$7,873.

The South Dakota department has granted a license to the North American Guaranty of Minneapolis, an accident and health company.

QUAKER CASUALTIES.

The Union National Accident, of Philadelphia, has issued a letter to its stockholders, tendering a proposition which suggests that it may be amalgamated by some larger and stronger company. The letter sets forth that it has been made evident to the management that a small casualty company may not hope to enter into successful competition with a limited capital. Only the companies with ample surplus may hope to survive.

This is the substance of the letter. Continuing, it urges and recommends its stockholders to trustee their holdings with the Fidelity Trust Company of Philadelphia.

The Columbia Securities Company of New Jersey is suggested by the letter as the clearing house for the transfer of stockholdings, the Fidelity Trust being merely the escrow. The plan proposed contemplates an equal exchange of Union National stock for that of the Columbia Securities.

The impression created by this deal and the intimate connection of the Fidelity Mutual Life with the Fidelity Trust, and its well known ownership of the Philadelphia Casualty, is that this is the long anticipated movement for annexing the feeble and the weaklings to some sound company, not only as a matter of civic pride, but as a matter of intelligent self-interest, not to mention public policy.

Philadelphia, with its one single exception, has not been fortunate in its casualty ventures. It has half a dozen small new concerns now putting up a more or less brazen frontage that must shortly be rescued or go to pot.

AGENTS' EXPIRATIONS.

Henry H. Putnam, secretary, National Association of Local Fire Insurance Agents, has issued a pamphlet setting forth the protective principles of the association in regard to agents' expirations.

Definition of Agents' Rights.

The National Association stands for the agent's right and moral right to retain his list of expirations, to be free to solicit the business at expiration on equal terms with other agents and companies, and to transfer the business which he controls by sale to another. When a company retires from an agency for any cause, the expirations in the agency which it leaves should be left undisturbed. The agent is under obligations to keep the business on the books of the company so long as the agency relation shall continue. When a company reinsures,

the agent of the reinsuring company should not solicit the expirations.

In Case of Reinsurance.

Agents of the reinsured company shall continue the business with the reinsuring company until expiration. The reinsuring company will respect the expirations of agents of the reinsured company and not solicit renewals from the insured. The reinsuring company will furnish the schedules of the reinsured company to its agents everywhere for the purpose of enabling them to make endorsements. Agents of the reinsuring company will be instructed not to solicit the expirations where the business of the reinsured company has been acquired by legitimate practices.

Rule for Local Boards.

Members of this board shall consider the knowledge of expirations of risks placed with them by fellow members, or coming into their possession by reinsurance of a company or transfer from one agent to another, as confidential, and soliciting of such risks by them or by others over whom they have control, shall be considered as a violation of the rules of this board and contrary to the spirit of personal honor upon which the association is founded.

NEW YORK'S ROTTEN HOSE.

A committee has been appointed by Fire Commissioner Waldo, of New York City, to supervise the purchase and to examine all hose. Each length will be branded and its history kept at headquarters so that if it proves unworthy in the three years of its guarantee it may be returned to the manufacturer, who must refund or replace it with those of the required standard.

The subject was discussed at fire headquarters Monday by the Commissioner and representatives of fire insurance companies, hose manufacturers, the Merchants' Association and others. The National Board of Fire Underwriters sent representatives from various cities. Chief Croker and other experts were there to explain things.

It was decided that the fire department should get strong and durable hose on standard specifications from the lowest bidder, the bidding to be entirely free and open, marking a distinct departure from former methods of Tammany purchases.

London advices state that a large firm of brokers and underwriters at Lloyds, London, are in trouble and may not pull through.

HOW THIS GUN KICKS.

The decision of the Western Union last week to restore the relief rule to active service will bring joy to the hearts of some of the union agents and field men who have been losing business while it was not being used. At the last meeting of the Illinois State Board there was much complaint of the loss of business to non-union companies. The governing committee suspended the relief rule some time after the abuses of it had received a good airing at the hearing before the Illinois Fire Insurance Commission at Quincy last fall. That put the union companies at a disadvantage. There being no anti-compact law in Illinois it is incumbent upon them to adhere to the advisory rates. With a power at hand to absolve them from this obligation they were able to meet the situation when non-union companies cut the rates, but with that power palsied they were helpless unless they took the matter in their own hands and cut rates too.

It is rather to be regretted that this question can not be handled satisfactorily without giving the governing committee a power over rates which it has claimed, in theory at least, not to have. There is, of course, a distinction between making rates and legalizing the breaking of them, but the exercise of either is likely to be popularly construed as exercise of control over rates. However, a body of practical insurance men is not likely to hesitate long over a name or a theory when confronted with the loss of desirable business. Insurance companies are not organized primarily for the purpose of posing as beautiful examples of adherence to good practices or good theories.

FOR A GUILLE DAY.

Department managers, general agents and special agents of the Sun Insurance Office, north, east, south and west, are busy framing up a new business day for May 11 next in commemoration of the 25th anniversary of Manager Guile's American control. A supply of a neat form of paster in silver and blue, showing the insignia of the Sun in the center, surrounded by the words "Complimentary to Manager J. J. Guile, 1885-1910" is being placed in the hands of the agents to be attached to daily reports of risks written in honor of the occasion. It was the intention of the staff to make the premium shower a surprise to the manager, but the project gained such momentum that the cat slipped out of the bag, and now some other companies and their

agents are actually going to complement the movement by contributing to "Guile Day."

Mr. Guile sails for London on the Lusitania May 18 to take part in the celebration on June 1 of the company's 200th birthday.

The annual banquet of the Life Underwriters' Association of Buffalo will be held at the Iroquois Hotel in that city Saturday. The principal speakers will be William H. Hotchkiss, Superintendent of Insurance; John W. Whittington, president of the National Association of Life Underwriters, and A. F. Sheldon, of Chicago.

Fire losses in Galveston during the past year are covered in a report by Chief Gernand of the Galveston fire department, who shows a total insurance loss of \$126,816 out of a total insurance involved of \$598,297. The property loss was \$1,486,200 insured and uninsured. During the year only four fires out of 296 extended beyond the building in which they originated.

Announcement is made of the engagement of George E. Kline, vice-president of the Continental and Fidelity-Phenix, to Miss Frances B. Cooper, of Great Falls, Montana. The news will be of surprise as well as of deep interest to Mr. Kline's friends.

F. M. Pond, for several years special agent of the Phenix of Brooklyn in Nebraska, has been appointed State agent of the Fidelity-Phenix in the same territory, being assisted by A. F. Siefken as special agent.

CHICAGO F. I. C.

The Chicago Fire Insurance Club has arranged a course of six lectures on law which begin on Tuesday in the assembly room of the Chicago Board, William R. T. Ewen, Jr., LL.B., of the Chicago bar, speaking on "Law of Contracts." The papers to follow will be: May 24, 1910, "Commercial Paper"; June 14, 1910, "Bailments"; October 11, 1910, "Chattel Mortgages, Bills of Sale, Mechanics' Liens, Attachments, Garnishments, etc."; November 8, 1910, "Real Estate," comprising among other things, Law of Descent, Real Estate Trusts, Landlord and Tenant, etc.; November 22, 1910, "Waiver." A talented speaker will handle each subject.

The Canton Insurance Office, Ltd., of Hong Kong, China, has made application for admission to Oregon. It will write marine lines only and will be represented by the Pettis-Gros-mayer Company of Portland.

COLORADO'S 1909 RETURNS.

"The Chronicle" has been favored by Commissioner W. L. Clayton with the report of the Colorado insurance department covering operations in that State for 1909, which shows that the business has made rapid development and that the Centennial State is a good field for intelligent effort.

The figures are interesting:

	Premiums.	Losses.
130 Fire Co.'s...	\$3,227,903	\$988,526
30 Life Co.'s...	4,511,412	1,455,736
45 Surety and Casualty Co.'s.	1,182,879	504,169
9 Assessment accident concerns	183,886	104,768
Totals	\$9,106,080	\$3,053,199

There are also 80 fraternal life concerns operating with a membership of 98,180, and insurance in force at \$149,790,790. The income and outgo of these concerns does not appear but their total assets as of Dec. 31 is

given as \$82,996,356. Of course this includes all the States.

The fire loss ratio is about normal while the life ratio is below the average, and the surety and casualty is extra heavy, coming perilously near the danger line for a number of the new companies while nearly all of the old ones seem to have kept well within safety lines.

Colorado Companies.

Of the entire number of companies—214—in the foregoing list there are but 9 Colorado concerns with premium income and loss account as follows:

	Premiums.	Losses.
4 Fire	\$117,474	\$25,141
2 Life	400,390	40,000
1 Assessment	36,781	10,608
1 Casualty	18,234	3,789
Totals	\$572,879	\$79,538

From these figures it is apparent that Colorado is a good field for the development of home industries. The figures are deserving of careful comparison and study.

HOME OFFICE OF THE**Metropolitan Life Insurance Co.**

(INCORPORATED BY THE STATE OF NEW YORK, STOCK COMPANY)

The Company OF the People, BY the People, FOR the People

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

New Business Paid-For

1905	.	.	.	.	.	\$ 90,334,038
1906	.	.	.	.	.	93,563,452
1907	.	.	.	.	.	102,233,634
1908	.	.	.	.	.	109,683,428
1909	.	.	.	.	.	113,716,188

Each year larger than any in the previous history of the Company:

Commenced Business 1858

INSURANCE MEN will note the significant increase in The Northwestern's new business during the past five years.

IMPORTANT FACTS relating to this business are shown by the following percentages:

	Expenses	Mortality	Interest
1905	12.15	67	4.73
1906	11.76	59	4.72
1907	11.81	58	4.76
1908	10.76	59	4.84
1909	10.63	54	4.85

It is capable of easy demonstration that The Northwestern is the best Company to insure in.

See The Northwestern's new (1910) policy contract with its Dividend Options, Paid-up and Endowment Options, Options of Settlement and the Premium Loan Features.

Issues Partnership and Corporation Insurance.

For further information or an Agency, address

Superintendent of Agencies.

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
Large surrender values.
Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

SELECT AND ULTIMATE VALUES.
 Single Premiums, Whole Life.
 Life Annuities.
 Terminal Reserves, Life, Limited Payment, Endowment.
 Mean Reserves, Life, Limited Payment, Endowment.
LOGARITHMS, SEVEN PLACES.
 Forborne Immediate Annuities.
 Curtate Summations of D Column.
 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.

Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.
Surrender Values.
Dividends.
 For these purposes the "select and ultimate" will be most useful.

The Dutchess Case.

There is a rather pretty mix-up over in the good old County of Dutchess, all about things that are almost forgotten. Superintendent Hotchkiss, of the Insurance Department, on patrol duty, has met with what a Manhattan cop would describe as "resisting an officer in the discharge of his duty." And there seems to be sound argument on both sides of the controversy. It's the old order of things against the new, the improved youngster against an age that burned witches and scoffed at Verne's submarine navigation story. The advances made in the medical, surgical and in the wireless and aviation conquests of the world of science have not been equalled by the development in insurance, especially of the life and casualty forms, within the past five years. But that's not to the point.

And so it is that when Mr. Hotchkiss puts his official finger on the button and calls "time," the elders of a generation passed are awakened in their "Amen Corner" and articulated into utterance. The story of the rub is best told by Superintendent Hotchkiss in the following statement:

An examination into the affairs of the Dutchess Fire Insurance Company was begun by the State Insurance Department on March 31. Such examination was the first since the one immediately following the organization of the company late in 1906. This examination is still in progress, and will not be completed in a week or ten days.

Facts developed seemed to require an examination of the affairs of the Dutchess Insurance Company, which prior to 1907 had been officered by the same persons and had done business from the same principal office as the Dutchess Fire Insurance Company, but which had been seriously impaired as a result of the San Francisco conflagration. This examination, now practically complete, brought out facts which led to mandatory action on the part of the Insurance Department at a meeting of the directors of the two

companies held at Poughkeepsie Wednesday night.

It is claimed that the older company's losses in San Francisco were so great as to wipe out its capital and surplus and compel it to settle with loss claimants at much less than par. For a time a receivership was threatened, but in the end avoided by settlements now claimed to have been, to an extent at least, based upon false representation. Some claimants were paid 30 cents on the dollar, settlements being made direct.

Suits involving possible attachments were, however, threatened, and the controlling officers devised a plan whereby a local attorney and certain of the directors borrowed funds from local banks with which funds loss claims were purchased at a discount, but ultimately paid for to such attorney at the face value of each claim, resulting in salvage to the stockholders of upward of \$80,000. This, up to the present time, has been concealed.

The examination also brought out the fact that the president of the two companies carried in special accounts various sums of money paid by the new company to the old for commissions on a reinsurance contract, and further, that such officer in 1908 and 1909 speculated actively on the credit of certain securities which had been turned over to the local attorney above mentioned in payment for the San Francisco claims acquired by him. It also developed that other funds, chiefly commission payments, had been similarly concealed by the company in his personal account, and, until the arrival of the examiners of the department, apparently treated as his own. Other irregularities evidencing an intention on the part of the officers of the old company and certain of its directors to sequester assets to the end that the true condition of the old company might not be known were brought out at oral examinations by representatives of the Insurance Department.

Further inquiries resulted in the discovery of the deception practiced on the Insurance Department by the president and other officials of the company late in 1906. These evidences consist in the cutting out of the minute book of the executive committee of a page purporting to give the pro-

ceedings of a meeting of that committee on August 18, 1906. The secretary of the company testified that the examiners of the department having called for such minute book, which showed an agreement that if carried into effect would have impaired the new company from the start, and made it impossible for it to secure its certificate of authority, President Vail cut out such leaf, the vice-president interlined the same with lead pencil, and gave the same to the secretary with orders to destroy it. This the secretary did not do, but in response to questions testified to the facts and produced the leaf cut out. It appears by comparison of this leaf with the page in the new minute book then started that the minutes of this meeting of the executive committee were modified at that time so that the department was deceived into believing that a liability of upward of \$60,000, which would have been shown by the leaf cut out, did not exist.

President Vail, when confronted with the cut-out leaf, denied knowledge of the transaction and asserted that the resolution there shown was never adopted. Examination of the files of the company developed the fact that these minutes shown on the cut-out sheet had been copied by the secretary from the original in the handwriting of President Vail, who, when confronted with such original, admitted the fact.

The examiners, in a preliminary report furnished the superintendent, also call attention to the conduct on the part of President Vail at the time the San Francisco claims were compromised, which drew from Superintendent Kelsey a statement that certain representations which were being made in San Francisco by the adjusters of this company were "misrepresentations and apparently fraudulent ones," the superintendent adding: "It is difficult to understand how business men dealing honestly can allow themselves to impose on the department in such a manner."

The Superintendent of Insurance at a meeting of the directors of the two companies directed that the trustees of the old company at once place the liquidation of its assets in the hands of a committee appointed or approved by him, President Vail being required

to resign as chairman of such trustees, and also that President Vail and the local attorney above mentioned turn over to such trustees all property held by them apparently in trust for the stockholders of the company.

The superintendent also directed the old company to carry out with the new company the reinsurance contract on the basis of 25 per cent., evidenced by the proceedings of the executive committee of the new company on the leaf cut out of the minute book, and that it ask and accept the resignation of L. H. Vail as president and director of such company.

The present company, so far as we know, is solvent, but the misdeeds of the old company are pretty serious.

Throws Down the Gauntlet to Hotchkiss.

The latest advices from Poughkeepsie state that the directors are up in open defiance of Superintendent Hotchkiss and insist on a judicial review of the allegations made.

Louis H. Vail, president of the old Dutchess, has issued a statement in which he denies the charges against him. The management of both the old and new Dutchess, which was formed after the San Francisco fire, announce that they will resist any attempt to oust Vail.

Allison Butts, Vails counsel, says that he will welcome court proceedings. This will give him an opportunity to cross-examine Jesse Graham, the secretary of the old Dutchess, who made the charges against Vail.

Secretary Graham is a brother-in-law of Public Service Commissioner James E. Sague, who is a stockholder and director in the new company, but not in the old company, in which Mr. Graham and Mr. Sague's mother have small interests. Mr. Sague refused to admit or deny the rumor that he instigated the investigation. He added that he wanted to see the fullest investigation of both companies, and would do all he could to further it. He said that he reserved the right to demand from any State commission or department an investigation of matters in which he is interested. Mr. Sague has \$7,500 in stock in the new company.

Practically all of Vail's fellow directors in the old company, which include three bank presidents, indorse his management of its affairs and say they were familiar with the acts of which Mr. Hotchkiss complains, and believe Mr. Vail did what was right.

The question regarding the 25 per cent. commission which was brought out by the superintendent regarding the missing minute book leaf, was straightened out by Milton A. Fowler, vice-president of the old company, who said:

With reference to the question as to whether the executive committee of

the Dutchess Fire Insurance Co., ever passed a resolution to pay the trustees of the Dutchess Insurance Co. a commission of 25 per cent., I am perfectly clear in my recollection, in which I am sustained by the three other members of the executive committee, that no such resolution was presented by me or was ever passed.

I have also stated, as have several members of each of the joint committees which were appointed to agree upon a commission to be paid that no agreement for the payment of a commission was ever reached until February, 1910, when the agreement for the payment of 15 per cent. was made and has been acted upon.

AT SEA ON FIRE COMMISSIONS.

About a dozen insurance commissioners and deputies were in Chicago last week holding committee meetings and hearings. On Monday and Tuesday the committee on fraternal insurance gave a hearing to the representatives of the fraternal on a draft of a proposed bill for the government of these concerns. To those who attended the hearings the whole thing looked like a thankless task. The commissioners have a bill, which will be further amended and worked over, which advocates of sound insurance would regard on the whole with favor. It might be adopted in some of the older States like New York or Massachusetts, where the younger fraternal have not so strong a foothold as they have in the West, but it is very doubtful whether it could be passed in any part of the Mississippi Valley States without having its teeth drawn by the fraternal to such an extent as to make it innocuous.

The hearing before the committee on the fire insurance expenses did not bring out much that is new. Neither companies nor organizations of companies had sent anybody to appear before the committee and at the first session O. B. Ryon, attorney of the Illinois Fire Insurance Commission, took up the time, in the absence of other witnesses, in telling the committee what had been brought out at the hearings of the Illinois commission. At Thursday's session P. D. McGregor, Western manager of the Queen; William S. Warren, Western manager of the Liverpool and London and Globe; G. H. Lermitt, Western manager of the Northern Assurance; J. W. Going, vice-president of the Shawnee; Harry Fox, Chicago manager of the Milwaukee Mechanics, and H. B. Seely, of the Policyholders Union, were present and spoke.

Mr. McGregor was armed with some figures and was able "to get down to brass tacks." The expense ratio of his company in Western Union territory is between 35 and 36

per cent., divided as follows: Commissions, 21.1 per cent.; taxes, 3.5 per cent.; field work, 4.3 per cent.; other expenses, about 7 per cent. The Queen's commissions average 18 per cent., outside the excepted cities, and 28 per cent. in them. Mr. McGregor does not believe commissions could be reduced outside of the large cities without injustice to the agents and injury to the business. He thinks that on a scale below 25 per cent. for preferred business agents could not afford to solicit it, the premiums being small and the collections often slow. He does believe that commissions in the large cities should be reduced.

Messrs. Lermitt and Warren furnished something of a surprise by advocating contingent commissions. For good members of the Western Union this looked somewhat like heresy of the Henry Evans type. Mr. Going explained the Kansas law and its results. There was considerable discussion by the commissioners themselves.

Wanted: Unselfish Thinking.

There appears to be a marked absence of clear thinking on this subject of expense. That the expenses are too high is almost universally admitted, but many of the notions of what should be done to reduce them are vague. Many people have theories on the subject as on numerous other subjects about which they know but little, but their very want of accurate and wide knowledge makes their theories of little value, and they doubtless would prove baneful, if not destructive, if put into statutory form. There are those who think the whole subject of expense would right itself if preferred business was done away with, and there was no class on which companies could almost certainly make money, even at high expense, poor agents, and inferior field supervision. How to get rid of preferred business is as much of a problem as how to reduce expenses. Some say: "Enact laws limiting commissions to 15 per cent." Others say that that would result in evasions of the law, or in the ruin of the small companies. There are those who think the small company no longer is needed, but the small company officers do not think so, nor do those who fear a combination of the large companies. One man suggests fixing the maximum of commissions at 15 per cent., limit companies to lines of not over 10 per cent of their capital and surplus, and forbid reinsurance, giving many companies a chance on large lines direct. And so it goes, suggestions and theories, world without end.

THE LAST WORD.

On the hour the last word in the new Mutual Life-McCurdy imbroglio with Superintendent of Insurance Hotchkiss, of New York, based upon the recent settlement of a long drawn out controversial contest over ancient history, is furnished in the letter dated Tuesday and written by Joseph H. Choate, chief referee, to President Peabody, as follows:

My Dear Mr. Peabody: I have your letter of April 22 enclosing a copy of the report of Mr. Hadley, the examiner of the Insurance Department. I have carefully perused the portion of it which relates to the settlement of the McCurdy suits, so-called, in which are set forth the report of the special committee to the board of trustees, of the settlement which was approved by James McKeen and myself and the examiner's criticism thereon.

The settlement was not made by the board of trustees upon any statement made by the committee, but the committee having received absolute authority to make the settlement exercised that power and made its proof accordingly.

On reperusing the report of the committee it appears to me to state with substantial accuracy the facts of the settlement, and I am sure that in the long consideration of the matter by the committee at their various meetings between the date of their appointment and the making of their report, at all of which I was present with Mr. McKeen, the terms of the settlement were perfectly understood as stated in the report and that the \$750,000 received in settlement was to come \$250,000 in cash from Mr. McCurdy, \$250,000 from C. H. Raymond & Co. by a credit on the amount standing due to them on the company's books and \$250,000 from Robert H. McCurdy by a similar credit on commissions coming to him under his contract, to which was to be added \$65,050.73, the amount of the bill for supplies received from Lawrence. All dispute as to the validity of these contracts was, of course, ended by the settlement, and so it was understood by all parties.

The report shows that the committee fully considered and understood the whole situation, and the report itself and the names and character of the committee are a sufficient refutation of the charge that they misled or intended to mislead the board of directors.

In my opinion, therefore, neither you nor the committee are called on to make any further reply to the criticisms of the examiner than that which you and Gen. Tracy have already made. From my knowledge of the situation I am willing to take the entire responsibility for the settlement recommended by the committee as a wise one and as better for the company and the true interests of the policyholders than to have continued the litigation, and Mr. McKeen concurs with me in this view.

Yours very truly,
JOSEPH H. CHOATE.

There is added interest to this open letter when considered in connection with Samuel Untermyer's suit against

the Mutual Life for alleged injury to a very high character, or something like that, equally amusing. After the cyclone there is inevitably a lot of debris for the second-hand and old clothes men to clean up, and busy people must of necessity be bothered with these sordid details. The Ethical Culture Society has not yet even approximately exhausted the field open to its gratuitous energies.

SHOWN UP A MATTER OF 150 YEARS AGO.

The United States Life Endowment Association, of Chicago, a "widows' annuity" concern, which considered that when a member died its liability was the one annuity payment then due, appears to be about ready to give up the ghost. Superintendent Potter, who some months ago succeeded in preventing the concern's doing any new business, has applied for a receiver.

His examiners' report discloses a shocking practice of compromising claims for pitifully small lump sums and then paying a much larger amount to the officer who pockets the difference. In several cases, President Kingsbury is charged with having put through such deals for his own profit.

Only 150 years ago or such a matter Dr. Richard Price showed up the essential fraudulence of this assessment "widows' annuity" plan, and that enlightened legislators of this day and land can permit widows to be defrauded in the "good old way" really passes understanding.

\$500,000 STOCK FOR "RENEWAL CONTRACTS."

In the complaint in the suit at Chattanooga, Tenn., to wind up the Great Southern Agency Company and to hold its officers and directors responsible for the misconduct of its promotion, it is alleged that all of its \$2,000,000 stock was issued to Herbert for an assignment of certain "renewal contracts," which proved to be worthless.

He magnanimously "turned back" \$1,500,000 into the treasury to be sold; but kept—or rather, sold as much and as quickly as possible, no doubt, for coin of the realm—the \$500,000.

This is the concern which declared a large dividend before commencing business.

ANOTHER FRAUD NAILED.

In the conviction of A. Gero Marshall, general factotum of the Standard Protective Society, in the United States Circuit Court in this city yesterday on four counts of two indictments charging the use of the mails in pursuance of a scheme to defraud, Assistant United States Attorneys Dorr and Walton scored an important victory in the warfare which the Federal authorities are waging against fake insurance companies.

Judge Hazel, who presided at the trial, imposed a sentence of one year in the Blackwell's Island Penitentiary and a fine of \$500.

The conviction of Marshall took on addition importance by reason of the fact that he was one of the two men indicted in the summer of 1908 for conducting a colonization scheme in violation of the Federal regulations, intended to take up large tracts of Government timber land in Oregon.

Marshall and one Henry E. G. Cooke were indicted at that time, and the office of their concern, the Oregon Timber and Ranching Company, at 154 Nassau street, was raided by the Federal authorities after one party of thirty-eight misguided individuals had already been shipped to the West. Marshall pleaded guilty to that indictment rather than stand trial.

In the same offices he conducted the Standard Protective Society, a Pennsylvania corporation organized under the somewhat elastic laws of that State to do ostensibly a benefit insurance business. The company started in Pennsylvania and then moved here, where it undertook to establish a headquarters for a business conducted largely among the farmers of Pennsylvania and the up-State districts of New York.

It was not nor could it be admitted as an insurance company to do business under the New York State laws, and at the time that the Federal authorities got after it the New York State Insurance Department had it on the list of proscribed concerns.

As conducted by Marshall the Standard Protective Society assumed to issue a policy which provided for small monthly payments by policyholders and a sick benefit, or at the end of five years a cash payment of \$250. The evidence showed that the company never had a dollar in the benefit fund, and generally, even on its own figures, lacked sufficient assets to meet its outstanding liabilities.

More than this the evidence adduced at the trial of Marshall developed the fact that he had openly stated to employees in his office that

he undertook to keep his business going by arbitrarily reducing the expected benefits to policyholders from time to time and thus scaring out or freezing out those who had taken his contracts of insurance. The investigations of Mr. Dorr and Mr. Walton indicate that about \$20,000 was extracted from the gullible public upon which he preyed.

Marshall was convicted of embezzlement in Somerset County, Penn., and has avoided the consequence of two prior indictments by settling with the individuals who said he had victimized them. In Cleveland, Ohio, a few years ago he was tried for obtaining money under false pretenses, but succeeded in beating the case.

Marshall in the later days of the Standard Protective Society started another concern called the Banker's Protective Society, and sold bonds at the same time he was victimizing the policyholders with his benefit scheme. His final deal in the insurance business was to sell his company into other hands after transferring to himself the last of its available assets.

COMPULSORY INSURANCE AGAINST SICKNESS COMING IN BRITAIN?

The Insurance Record, of London, in its issue of April 15, expresses the view that compulsory insurance against sickness will be on the program of the present Liberal government before it again appeals to the voters. It says in part:

It has been said that it is never safe to prophecy unless you know, and it might well be added that, in regard to anything to be expected from a government, prophecy is an extremely unwise proceeding. In the present state of political affairs and parties it is certainly not possible to prognosticate with any degree of certainty even the length of time that the present government are likely to hold on to office, so that discussion of any probable measures to be introduced by the party at present in power would seem almost superfluous. There exists, however, a belief, freely expressed of late in the columns of the insurance press, that before the government once again endeavor to obtain the approval of the country on their general program, an attempt will be made to introduce a scheme of State insurance against sickness and invalidity. The idea of governmental insurance against sickness is naturally an attractive one to all interested in social reform, while there probably exists no topic upon which a politician can rhapsodize so effectively. It is undoubtedly a great help in a vote-catching scheme to refer to the "sick and broken soldiers of industry in need of aid" as having been "cruelly and callously deprived of a great humane provision by men who have never known the sting of

want and poverty." Language of this nature was adopted by the member of the government primarily responsible for bringing State insurance into the forefront of modern British politics, and in this very language would appear to lie a danger that any scheme to be introduced will be fashioned more upon sentimental than upon common-sense and businesslike principles. The fact that details of the proposed scheme have been submitted to two of the greatest actuaries the government could command is more reassuring, however, and their endorsement of the plan would have more effect upon business men than columns of high-falutin language indulged in by politicians in a hurry.

The plan under consideration by the government provides for utilizing the existing friendly societies—i. e., accepting membership in them as compliance with the law—as well as setting up other societies to which all who are not insured elsewhere must belong.

THE LARGEST INCREASES IN 1909.

Of the life insurance companies doing business in New York, the Massachusetts Mutual leads in percentage of increase in insurance in force in 1909, scoring 8.03 per cent. The Travelers is a close second with 8.02 per cent. Other leaders are as follows:

	Per Cent.	Amount.
Mutual Benefit.....	7.02	\$32,932,473
New Eng. Mutual..	6.80	12,578,914
Prov. Life & Trust.	6.62	13,323,910
Union Central.....	5.80	15,839,528
Penn Mutual	5.62	25,094,877

PITTSBURGH LIFE AND TRUST.

President Baldwin of the Pittsburgh Life and Trust, announces the appointment of George Smith, of Forfarshire, Scotland, to a position on the home office staff as supervisor of agencies. Mr. Smith has had a thorough training in all departments of the insurance business, and is especially considered authority on workmen's compensation and casualty risks, as well as being a very successful life agency organizer and field man.

Mr. Smith was born in Forfarshire, Scotland, in 1875. For three years he was connected with a firm of brokers in Dundee. He was eight years with the secretary of the Alliance Assurance Company of London, at Dundee, and was afterward branch manager and secretary of the Century Insurance Company of London, at Edinburgh. For the past two years he has been in Australia, where he held the position of superintendent of the life and accident departments at the home office of the Australian Assurance Company.

Mr. Smith has not only had a thorough home office and field experience, but he also possessed the faculty of preparing literature and writing fluently upon all insurance matters pertaining to life, casualty and workmen's compensation lines of underwriting. He has found time during a busy career to write a series of instructive articles and poems, which have appeared in various journals in Britain, America and Australia. His new field will afford him ample opportunity for the exercise of his many talents.

LEADING BRITISH ACTUARY FAVORS STATE INVALIDITY INSURANCE.

At a recent meeting of the Faculty of Actuaries of Scotland, Vyvyan Marr, assistant secretary of the Edinburgh Life Assurance Company at its London office, read an interesting paper upon the best means of supplementing the present old age pension law of Great Britain, which grants to all over 70, whose income is below a certain figure, a pension from the State.

The suggestion of reducing the age to 65 or even to 60 he considers unwise. He also shows that to pass down even to 65 would double the present burden which is already enormous, and he estimates that more than half of the recipients would be capable of earning a livelihood and so not be in need of the pension.

He favors, instead, compulsory insurance against invalidity, i. e., total

and permanent incapacity, to be paid for by contributions of the workmen, of employers and of the State, and, as the same would be compulsory, he would favor the "assessment" plan, the "compulsion" taking the place of the reserve which would be necessary under a voluntary system.

Archibald Hewat, F.F.A., the authority on pension funds, followed, also expressing his strong preference for a contributory plan.

LIFE UNDERWRITERS MEET SEPTEMBER 7.

The date for the annual convention of the National Association of Life Underwriters, which this year meets at Detroit, is fixed for September 7 to 10. The Canadian Life Underwriters' Association meets immediately before that date.

The subject for the prize essay competition is "The Appeal That Persuades in Soliciting," and the program embraces discussion of:

(1) How to Improve Our Service to Policyholders.

(2) How to Obtain and Hold Agents Under Present Conditions.

A—How Best to Overcome the Difficulty in Securing New Agents.

B—Has Not the Work a Special Dignity?

C—Is Not the Percentage of Successes Greater in Life Insurance Work Than in Other Lines?

(3) Under Present Conditions How Best May it Be Made Profitable to Keep a Field Man Traveling Through Territory for the Purpose of Appointing, Encouraging and Assisting Local Agents?

The Federal Life Insurance Company of Chicago has appointed as its cashier Colin E. King, formerly secretary of the Interstate Life Assurance Company of Indianapolis. Mr. King is a high-grade man and an efficient accountant, and the Federal is to be congratulated upon securing his services.

METROPOLITAN SECURES SITE FOR SANITARIUM.

Subject to the permission of the board of health of Westchester county, that it establish there a sanitarium for the treatment of tuberculosis, the Metropolitan Life Insurance Company has purchased 225 acres of land near Somers Centre, on the Putnam road.

The land, though near New York, is a pine forest, with abundant springs and well elevated.

The plans are for a camp consisting of portable cottages, with a permanent headquarters in the center.

The price of the Frankfort Marine Accident and Plate Glass Insurance Company shares was 2,070 marks on April 1. The paid-up value is 250 marks.

KNIGHTS OF COLUMBUS SURPLUS FUND.

The trial of the action of Kane et al. vs. Knights of Columbus has been in process at Bridgeport, Conn., this week. The issue is as to the disposition of some \$570,000 of funds, held by the society, when it adopted its new rates and plans in 1902. The issue has been repeatedly raised, but without being adjudicated by the courts. All parties desiring such adjudication, the suit was brought as a friendly action, and, pursuant to a resolution of the National Council that the decision of the Supreme Court of Connecticut be secured.

District Attorney Pelletier, of Boston, with his assistant, Mr. Leahy, and Senator Kennedy, of Connecticut, represented the society, and Messrs. John J. Phelan and John Cullinan, of Bridgeport, and Miles M. Dawson, of New York, the plaintiff. The hearing was held before Judge Curtis, of the Superior Court.

The testimony taken showed the excellent progress made by the society under its adequate rate plans, introduced by Actuary David Parks Fackler in 1902, its insured membership increasing from 33,000 to 75,000 and its surplus, including the funds in question, over all other liabilities including reserve as computed by Mr. Fackler, from \$550,000 to about \$1,150,000. In event the funds in question are apportioned to the old members, therefore, the society will still have a handsome net surplus after covering all liabilities of every character. Its assets would not be diminished in any case, as the application asked for is merely to the reduction of future premiums.

By consent of all parties, the decision of whether there is a trust calling for an accounting, distribution and application of the funds, was, after all the testimony was in, referred by Judge Curtis directly to the Supreme Court, which is expected to hear the case at the June term. If accounting is awarded, it is not expected that there will be any difficulty about the parties agreeing upon a method. Among the expert witnesses called were Mr. Fackler, George D. Eldridge and B. D. Flynn, of the Travelers, of Hartford.

A person is more liable to accidental death than any other single cause excepting consumption and pneumonia, the average age at death from accident being 33 years. A person is twice as liable to die by accident as from old age.—"Commentator."

UNEXAMPLED "WANING OF WASTE."

The veteran life insurance statistician, "Benjamin F. Brown, of Boston," author of the "Brown Book of Life Insurance Economics," publishes some extracts from the forthcoming 1910 edition in "The Standard," of the 23d inst., closing with the following.

Other notable evidences of the passing of one of the most trying periods in the history of the institution, and of conditions which point strongly to the up-building of the business on a higher plane than ever before, will be found in the waxing gain from new issues in the last two years and the waning of waste by discontinued business to a point which, as measured by percentage, has never been closely approximated in the writer's experience.

The lowest percentage of lapse (or rather of total terminations, other than by death or maturity) was 2.56 per cent. in the Connecticut Mutual. The average of twenty-five leading companies was but 5.39 as compared with 7.89 in 1906.

The average cost of new business was 76.9 per cent. of the first year's premiums, as against 88.6 per cent. in 1906, with \$912,437,400 produced, as against \$875,110,300.

PROVIDENT SAVINGS LIFE APPOINTMENTS.

The Provident Savings Life Assurance Society of New York announces the appointment of George R. Burris as manager at Rochester, N. Y., controlling the mid-western part of the State of New York. Mr. Burris is an experienced insurance man, having been previously connected with the Provident Savings and also with the Prudential and the Fidelity and Casualty Company at Rochester.

Frank J. Sehrey has been appointed general agent for the society at Buffalo, N. Y., controlling the New York Lake counties. Mr. Sehrey is also an experienced insurance man, and has resided in Buffalo for many years.

SUSPECT A FRAUD.

Press dispatches from Chicago state that five of the big life insurance companies are suspicious of the circumstances surrounding the death on Monday night of Joseph Deimel, president of the National Parlor Furniture Company, buried at Blue Island yesterday.

Deimel was killed by a Rock Island train at Blue Island as he attempted to board it to return to Chicago. He lived a few minutes after being struck, but died without making any ante-mortem statement.

Deimel was reputed to be worth \$500,000 and had taken out insurance on his life amounting to more than \$500,000 within the last few months.

The insurance officials suspect that he committed suicide and have decided to withhold payment of the policies on his life until an inquiry can be made.

On Tuesday a coroner's inquest was held in the case and a verdict was returned that Deimel had died of shock following a railway accident.

Despite the decision of the coroner's jury the insurance companies have evidence that did not come to the attention of the coroner.

A receiver has been appointed for the Union Life and Trust Company of Muskogee, Okla., the first of the numerous million-dollar life insurance companies promoted in that State. Its stock was sold by salesmen on high commissions and promises of enormous profits and the recent warnings by the insurance department precipitated the collapse.

The annual meeting of the American Life Convention will be held at Des Moines during the first week in October.

WILL TEST INTER-PROVINCIAL SUPERVISION.

"Office and Field," of Toronto, is authority that the present prospects are that the question of the right of the Dominion to regulate inter-provincial operations of insurance companies—which a Province of Quebec judge recently decided adversely—"is going to be fought out to the last court," which presumably means two appeals, the last one to the Privy Council in London. The following is part of what "Office and Field" says of it:

That the companies are justified in feeling that even the Dominion House is uncertain of its authority and has been reluctant to bring the issue of jurisdiction to a head is seen from the habitual non-enforcement of the present insurance law. For years this law has been systematically ignored by insurance companies, especially in the Western provinces. The Prudential of Winnipeg, for instance, has been operating in Saskatchewan for some time, and is now doing business in New Brunswick.

When it opened in Saskatchewan the matter of this contravention of the present insurance act was brought to the attention of the department of justice at Ottawa and the deputy minister ruled that the company was operating in Saskatchewan illegally. When asked what was going to be done to enforce the law, the answer was given that the Dominion authorities had never considered it their duty to enforce the act.

In spite of the fact that the present law was never pressed, a new law is about to be placed on the books, a

good law, and one that would place life insurance on a basis satisfactory to all. But over it all hangs the uncertainty of the matter of jurisdiction. The Dominion has decided to submit a test case to the Supreme Court, and that means a Privy Council decision, no matter which way the lower court rules. The provincial authorities did not suspect that the Federal cabinet would ignore the unanimity of the provinces in asking that the case already quoted as a precedent be allowed to decide.

The insurance companies are almost a unit in desiring Federal control. It is not that they fear injustice or lack of consideration from the provinces, but the lack of uniformity if nine provinces made their own laws would mean serious work and expensive red tape. They claim that the inter-province conditions of life insurance should demand Federal inspection and control, in order to prevent the mixture of legislation that will bind the companies in different provinces.

DUNHAM MADE CHIEF OF LIQUIDATION BUREAU.

Frederic G. Dunham, of New York, has been appointed chief of the new liquidation bureau in the New York State Insurance Department. Mr. Dunham, until about a year ago, was a practicing lawyer in New York city. He had acted as special counsel in the examination of titles to real estate held by or mortgaged to insurance companies. On the enactment of the new law authorizing the department to take possession of and liquidate insurance companies, Mr. Dunham was appointed special Deputy Superintendent to take charge of and liquidate eight mutual fire insurance companies which had transacted business in central New York, and since that time has been stationed at Syracuse.

His work in this connection has been of a high character, in that in less than a year he has completed the liquidation of one of the companies, paying its creditors 100 cents on the dollar, and will be able shortly to complete his work in the other com-

panies by paying loss claimants in full. His experience in this field, therefore, in the judgment of the department, peculiarly qualifies him to organize and set in motion the new liquidation bureau resulting from recent legislation.

Pursuant to this policy of the department to continue its examiners only temporarily in charge of failed companies, Examiner Saxton, who has so ably represented the department in the liquidation of the Peoples Mutual Life Insurance Association and League, has been relieved and Mr. Dunham has been appointed Deputy Superintendent in his stead. The complete liquidation of the company will now be pushed as rapidly as possible. Certificate holders will shortly be requested to send in their certificates and membership books, that their claims may be ascertained and the basis of dividends to them established. It is thought that a very considerable dividend will be available for payment soon after July 1. Meanwhile, the department is advising certificate holders not to assign their claims, but to await the payment of dividends.

The Texas commissioner has decided to allow the public access to the list of Texas insurance agents.

INSURANCE IN FORCE
FIFTY MILLION DOLLARS

IN NEW ENGLAND

THIS SHOULD HOLD "FITZY" FOR A WHILE.

The suspense as to what Mayor Fitzgerald would do in regard to the fire commissionership of Boston—the term of the present incumbent expiring May 1—was ended a few days ago by the announcement that His Honor had selected Jeremiah J. McCarthy, surveyor of the port of Boston, for the job. However estimable a gentleman Mr. McCarthy may be, no one has as yet come forward with any striking presentation of his fitness for the place, whereas the present incumbent, General Samuel D. Parker, has made an excellent record, to say nothing of the two years' experience he has had upon which to build further efficiency in duties which the new comer would still have to learn. Both the fire underwriters and other business interests of Boston have labored with the Mayor for the retention of General Parker, but to no avail.

Robert A. Boit, a leading fire underwriter of Boston, and former president of the board, has addressed an open letter to the Mayor, which speaks for itself in no uncertain terms, as follows, in greater part:

April 23, 1910.

Honorable John F. Fitzgerald, Mayor of Boston:

Sir: With great regret I see in the evening papers that you have appointed Mr. J. J. McCarthy in the place of General Parker as fire commissioner. Whether you have been influenced by political or personal reasons is immaterial. It is enough that you have practically discharged from this important office a man who has distinguished himself as an organizer and administrator, and as a most energetic and efficient head of the department—a man who has been entirely above and superior to political influences in the discharge of his duties.

He has commanded the confidence of all citizens with property and property interests subject to fire. As the citizens of Boston pay more per capita for their fire department than any city in the world, they certainly had a right to the best man obtainable at the head of it. That you have appointed to the place a Republican officeholder does not help matters. To those legitimately interested it is not a question of party, but of the best man for the place, and you are letting go one who has never had his superior in Boston as a fire commissioner.

* * * * *

As your honor has taken this action against the expressed wishes of the fire underwriters and property owners and business men of this city—those most deeply interested financially in this question—it will try even

your honor's great ability to make it harmonize with your reiterated statements that your energies have been and would be devoted only to the best interests of Boston and her citizens.

This is the first time since the insurance interests and property owners of Boston succeeded in getting rid of the political three-headed commission that a fire commissioner has been appointed in Boston solely from political or personal reasons, and this is an act which neither the underwriters nor property owners of Boston are likely to forget. Respectfully yours,

ROBERT A. BOIT.

Not Bad for One Company's Representatives.

The blushing honors that Walter Adlard wears so modestly recalls to Boston underwriters how service at some time in the New England field of the Queen seems to have been the steady road to preferment. First there was E. G. Richards, now United States manager of the North British and Mercantile; then C. G. Smith, now secretary of the German American; then Nevitt S. Bartow, now secretary of the Queen, and, finally Walter Adlard, soon to steer the underwriting course of the greatest fire and marine company launched in a generation. Quite a showing, isn't it?

"Trailing the Fire Bug."

Nothing more interesting has been presented to the members of the Boston Insurance Library Association than the address under the heading above, delivered at the Exchange Club last Friday evening by Fire Marshal Beers, of New York City. The stereopticon views were particularly effective, showing how the sleuths of the investigation service followed the movements of intending incendiaries step by step in certain cases, and Mr. Beers' elucidation of the pictures impressed his auditors with the efficiency of the bureau he controls.

New England Brevities.

The New England Casualty has appointed Charles W. Coffin to be field manager of its industrial health and accident branch. Mr. Coffin was formerly identified with the Aetna Life's liability branch in Boston.

John A. Mathias, for some time past in charge of the New England department of the Home Life, has been appointed assistant superintendent of the agencies of that company, and is succeeded by F. S. Retan as general agent in charge of its Boston office.

The exterior of the new building of the Boston Mutual Life on Kilby street is completed and presents a

very natty appearance, quite in keeping with the company's characteristics—spunk, crisp, and up-to-date-ness. The interior is practically ready, save for the finishing touches, which are being rapidly put on.

After two years' agitation, the bill which provides that in Massachusetts insurance agents or brokers who withhold premiums collected for insurance companies, shall be deemed guilty of larceny, has become a law. The bill was sponsored by Insurance Commissioner Hardison and introduced in the legislative session of 1909, but was referred to this year's sitting, where it passed both branches and was signed by Governor Draper last Friday. It is a good measure, and ought to end a very annoying abuse for which there is no excuse but the shiftlessness and indifference of a small minority engaged in the business.

Lester B. Howard, of Augusta, Me., has been appointed special agent for Maine, New Hampshire, and Vermont of the Fidelity-Phenix, beginning next Monday. He takes the place of the late W. J. Kelly, for many years identified with the field work of the Phenix in Northern New England.

Herman Bird, for twenty-six years president of the Cambridge (Mass.) Board of Fire Underwriters, relinquished that office at the recent meeting of the board, and his associates gave him a handsome cane in recognition of his sterling worth. Herman is a typical New Englander of the best sort, shrewd and kindly, ever on the level, abundantly endowed with the saving grace of humor, and of such unfailing punctuality that all the denizens of Water street set their watches when he enters the Field & Cowles office at the dot of twelve every business day. May you live many a long year more, in health and happiness, to enjoy that stick, Herman, dear old friend!

C. F. Pierce has been elected president, A. R. Henderson, vice-president, and A. M. Stewart, secretary, of the Cambridge board.

The second annual outing of the Aetna Life Club of Hartford will take place at Compounce Pond, New Britain, on Saturday, June 18, prox.

Application for a license to write credit insurance in Massachusetts has been made by the London Guarantee and Accident.

Permission to do business in Massachusetts is sought by the Phoenix Preferred Accident of Detroit.

A FOOLISH PLAN.

For several months it has been a matter of common knowledge on La Salle street that one of the prominent Western departments at Chicago was having a vast amount of trouble in its accounting department. Of course, it was rather a delicate matter to discuss, so the talk about it was rather quiet, but details continued to come out as time went by until it was known that the accountants had got things "all balled up." There were stories to the effect that the books had been put in bad shape intentionally, for spite against the manager, by a bookkeeper who thought he had a grievance; but there is reason to believe there was nothing to this.

Last fall the manager discovered that something was wrong. Protests commenced to come in from agents that they were being dunned on their accounts, which they already had paid, and special agents soon were making a big roar over being sent to collect balances from good agents who never were behind, only to have proofs presented to them that the alleged balances had been paid in due time. Investigation showed that errors had been made in crediting remittances to the wrong accounts. It was found also that accounts with other companies for reinsurance and the like were also mixed. It was a very serious matter. Night after night the manager and assistant manager and an expert accountant worked over the books, getting them straightened out. It is only within the past few weeks that the books could be said to be absolutely correct again.

Now it is related that this is not the only Western department that had been through such a siege, although the others perhaps had a less bitter experience.

Penny Wise and Pound Foolish.

The prime cause of the trouble in all these cases seems to have been false economy. It was a case of a \$1,000 man on a \$2,500 job, and he was not big enough for it. The Western departments—or some of them—are under constant pressure to hold down expenses. The one which had the recent trouble was one of these and the trouble became serious about the time that salaries were cut, under orders from the home office to reduce expenses.

Probably a secondary cause of the trouble is the fact that very few of the managers are themselves trained accountants. In fact, it is said that A. F. Dean, of the Springfield, is about the only manager in Chicago who could lay claim to being a master

of accounting. Coming up through the underwriting department or in from the field, a manager is in danger of looking upon the underwriting or the field work as the important matter and to place a low value on accountancy. Having to economize, he concludes that an ordinary bookkeeper can keep the books, or, if he has a good accountant, the limit of his possible salary is likely to be placed too low. With incompetent accountants a few mistakes are made. Then when an effort is made to discover them work piles up and soon the books are in a snarl. The manager, not being an accountant himself, is at the mercy of his accounting department. He does not know when things are going wrong until they have reached such a bad pass that it is a work of months to straighten them out. It is rather surprising that when several departments have had an experience of this kind those managers who have incompetent or underpaid accountants do not wake up to the danger they are running. Some of them are in no danger for they have been shrewd enough to get good accountants and pay them what they are worth.

Another Phase of the Policy.

Some years ago before the Czarina of Russia had presented that empire with an heir to the throne, but had become the mother of several heiresses, a Western newspaper published a cartoon giving a picture of the imperial palace placarded with a large sign "Wanted—A Boyski." A similar sign on Western departments or home offices of fire companies diligently seeking special agents would not be amiss. Field changes have been very common of late. At the present time there are probably a dozen field vacancies in the West and companies are advertising for field men. Yet in a number of cases it has been found that what was really wanted was a boy, who would travel at

\$75 a month with prospects of getting a hundred sometime in the future. Not all the vacancies are of that kind, by any means. There are some managers who are looking for strong men and are willing to pay men's salaries, but there have been so many cases of the other kind as to be noticeable. There are in Chicago men now idle who have had several years field experience and have made good in every position they held. They have applied for various positions that were open, have had interviews and were given doubtful answers after they had named reasonable salaries they would work for. Then in a few days it was announced that some very young man out of a local agency or one with only a few months' experience had been chosen.

Henry A. Day, until lately indented with the Cleveland office of the American Credit Indemnity and prior to that active in New England as an insurance man, has been appointed special agent of the Boston office of the company.

FIRE INSURANCE STOCK SELLING.

In significant contrast with this extraordinary activity of promoters of life insurance company stock-selling schemes stand the very few attempts to organize new fire insurance companies. The professional stock salesman is not wasting his time in vain endeavors to induce business men to invest money in fire insurance; the business man knows too much about the troubles of the fire insurance business. He realizes the effects of a conflagration and has some conception of the moral hazard of the business and also of its intricate nature. And he is willing to give up his chance of making a fortune out of fire insurance to somebody else. So there may be to-day throughout the country, a dozen fire insurance companies in process of organization, as against about a hundred and eighty life companies. The disparity is all the more remarkable when it is considered that while the public has to be talked into taking out life insurance, it seeks fire insurance voluntarily. And this disinclination on the part of the public to invest in the stock of new fire insurance companies hardly squares with the frequent complaint that fire insurance rates are too high. If they are, profits ought to be big and fire insurance company stock a highly desirable investment. Yet the grumblers who think too poorly of the business to invest their money in it insist that rates must come down. There is to be an investigation into the fire insurance business in New York, and an investigation into the expenses of the business has been begun in Chicago this week. All of which may possibly foreshadow changes in the methods of conducting the business which will make it still less attractive to investors.—From "The Standard," April 23, 1910.

It is true that the volume of stock selling has been much greater in life insurance than in fire insurance of late; but there has not been an absolute dearth of the latter, by any means, and there are not wanting indications that the life insurance stock field is about worked out and that increased attention is being given to the promotion of fire companies.

And did the Armstrong investigation discourage sales of stock in new life companies? If, instead, it boomed them—or at least a boom followed it—might not a similar phenomenon attend the threatened fire insurance investigation?

NO AGREEMENT ON UNIFORM BILL.

The meeting of the committee of the insurance commissioners on a proposed uniform bill for the supervision of fraternal beneficiary societies which took place in Chicago last week encountered very active and even frenzied opposition on the part of several societies. One manager is said to have indulged in the peroration:

"The fraternalists will welcome the

bill with bloody hands to an inhospitable grave."

Notwithstanding which, and notwithstanding the evident ability of certain societies to make this threat good, in several States at least, the committee, it is reported, will adhere to the minimum rate and valuation requirements, to take effect January 1, 1912.

In view of the Wright and Dowdall decisions in the New York Court of Appeals, it is supposed that the minimum rate requirements will apply only to new members. If so, such a measure should also provide for complete separation of insurance funds of old and new members, with entire absence of inter-liability. Else the Mutual Reserve story may be retold many times, i. e., the payments of adequate rate members be absorbed to pay excessive death claims of the other class.

FIRE INSURANCE RESERVES IN GREAT BRITAIN.

Heretofore fire insurance companies in Great Britain have been a law unto themselves as regards reserves. About three-fourths of a gross or unearned premium reserve—i. e., averaging 40 per cent. of the premiums on annual risks—has been the rule. But it has been as much lower than that, at times, as the folly of the management might make it.

The new Assurance Companies' Act provides in the sixth schedule for the following item of liability in a company's statement:

The value of a current policy shall be such portion of the last premium paid as is proportionate to the unexpired portion of the period in respect of which the premium was paid.

That is, Great Britain goes over to the American system. "The Insurance News," of London, in commenting upon this, says:

We can only repeat that in the mere fact of compelling the fire offices to disclose and provide for the one supreme item in their liabilities, the new act is of priceless value, and at one stroke puts an end to a system of deception, and even of fraud, which has long been the blot and curse of fire insurance administration.

The Illinois Surety Company is on the \$300,000 bond of the Alling Construction Company of Chicago, guaranteeing the proper completion of the new Cook County poorhouse. The construction company has gone into the hands of a receiver and the Illinois Surety has been notified by the Cook County board that it must complete the poorhouse.

The impending legislation investigation of all other than life insurance companies by the New York Department is now a fixed fact.

MANAGER MULLER.

Secretary Nicholas W. Muller tendered his resignation as secretary of the Casualty Company of America, to accept a position of larger responsibilities with the Peninsula Casualty Company of Jacksonville Fla.

As a token of the high regard and esteem in which he was held by his business associates, he was tendered a banquet on Friday, the 22d, by twenty-five of the heads of the company, which was a most enjoyable affair, and one which very clearly demonstrated how greatly he will be missed and how much he was loved by those with whom he has been associated in the past years.

A handsome silver fruit set was presented him by his hosts, a fitting and appropriate service for use in his new position in the fruit and flower land of Ponce de Leon.

Mr. Muller was born on February 7, 1877, and was educated at the high school at Lockport, N. Y., and at Columbia University, where he was graduated in 1904. He served in 1898 in the Spanish-American War and 1899-1901 in the Philippine War. He took up insurance work in 1904 as filing clerk with the casualty company and has since risen to his present position.

WILL ENTER NEW TERRITORY.

Address,

CHARLES M. TURNER,
General Manager,

Marquette Building, CHICAGO, ILL.

ANOTHER DUPLICATION OF NAME.

Another Three C's casualty company—the Commercial, of Nashville, Tenn.—is booked for banner raising September 1. All lines, as usual. Really, the casualty craze has become an obsession in certain sections of the country. Philadelphia, Kansas City, Atlanta, Oklahoma, and even New York have been the centers of the disturbance, as the weather man would state it.

How many of the eggs in the incubator will hatch a healthy chick is a matter of the merest speculation. Certainly not all, nor even half. Already three of the bantlings have been gathered in under one fold, and there are more to follow.

There are excellent names in the list of officers of the new company, as named, that are a presage of success.

Frank Dibrell, president; William Peak, secretary; W. J. Cude, treasurer; P. R. G. Barnette and W. C. Lacey, directors; Dr. C. F. Anderson, medical director; Dr. Duncan Eve, Sr., consulting surgeon.

The title is a distinct handicap to expansion because there is already a Commercial Casualty Company in the field, full panoplied, and there is an unwritten law of comity and public policy which declines to license two companies of the same title.

To the idle inquisitor there is a suggestion for psychologic inquiry as to the whyness of so many of new ones running to title of three words and Three C initials.

VICE-PRESIDENT GILBERT.

It is in logical line with the constructive and creative work of President Joyce, of the National Surety, to recognize the value of Frank L. Gilbert, Pacific Coast manager, in elevating him to the vice-presidency and directorate of the company.

Mr. Gilbert will continue his residence in San Francisco and exercise his new functions in executive work of development, a field in which he proved an adept as manager. He formerly represented a Maryland company, the unpopularity and ponderosity of which even his own personal popularity could not successfully overcome, and he threw it over for the National, since when he has had a constantly enlarging measure of success, resulting in this latest recognition of his ability.

With enlarged powers and the experience gained by the clear-headed judgment that carried him safely through the earthquake period that

tried men's souls, as well as their treasure, combined with that gained later by the awful political graft exposures and recent criminal convictions in San Francisco's municipal affairs, through which he safely steered his company, it is easily presumable that Mr. Gilbert will shortly make the National and its progressive forms the leaders on the Coast.

Hats off to the new vice-president!

MAKING A SUCCESS.

The Indiana and Ohio Live Stock Insurance Company of Crawfordsville, Ind., has increased its capital stock from \$100,000 to \$200,000, with full paid subscriptions, and has doubled its office space. J. R. Bonnell, the president of the company, was United States collector of internal revenue at Terre Haute, but resigned that office at the expiration of his term on March 31, to devote his entire time to the company. The prospect for the current year gives every expectation of another large increase over its 1909 premium income of \$400,000.

The American Casualty Company of Tacoma, with J. E. Chilberg, of Alaska-Yukon Exposition fame as president, is making rapid strides. It has an authorized capital of \$250,000 and insures against loss of time through accident, sickness or death. It is an industrial plan company with insurance at the cost of \$1 per month.

As already announced, the Western Casualty, organized at Denver last September, has been abandoned by its promoters. In a recent statement to the Colorado Insurance Department, the company's attorney advises that only thirteen shares of the concern's stock has been issued, and these shares to the incorporators. At the present time the subscription books are closed.

THE PRUNING PROCESS.

The first general rating of surety companies' limits on Federal government undertakings since the placing of the entire subject under direction of the Treasury Department, has been furnished "The Chronicle" by Honorable Franklin MacVeagh, Secretary of the Treasury, accompanied by a ruling which indicates a return to the formerly abandoned stand that a surety company will not be approved on government bonds in a State or Territory where it has not complied with local laws. He says:

"Bonds executed by companies in States in which they are not regularly licensed to do a fidelity and surety business will not be accepted."

This is a complete reversal of the former ruling which ignored State qualifications of sureties on bonds and adhered rigidly to the exact terms of the act of August, 1894. There is grave doubt as to the authority of the Secretary of the Treasury to read into the statute mere personal opinions of interpretation. In fact the two recent reversals of rulings not only indicate the weakness of the situation, but also the danger, because no surety—individual or corporate—may ever determine where he "is at" under the new rule.

Uncle Sam's bonding business is a big and ever-increasing one and deserves a far greater degree of sober consideration than it has ever received. It has been foot-balled back and forth by incompetents in office for brief periods and has never had any appreciable measure of intelligent treatment. It is not difficult to locate the cause. Cheap politicians, through their political henchmen, have had a man, or men, in direction of this highly important branch of government conservation utterly devoid of any ability except that of promptly drawing salary and preventing the wind from blowing the desk chair out of the window.

The New List at 10 Per Cent.

Following is the limit of 10 per cent. of capital and surplus for which any one company will be approved on any one bond:

Am. Surety	\$ 562,783
Fidelity and Deposit	434,564
Fidelity and Casualty	356,422
U. S. Fidelity and Guar.	244,765
National Surety	166,997
Am. Bonding	150,024
Title Guaranty	124,717
Mass. Bonding	70,005
Pacific Coast Casualty	66,278
Am. Fidelity	67,555
U. S. Guarantee	60,053
Citizens' Trust	52,263
Empire State Surety	60,058
Peoples Surety	50,683
Bankers Surety	54,025

Southwestern Surety	45,000
Southern Surety	47,172
Pa. Surety	44,774
International Fidelity	39,257
Pacific Surety	37,513
Federal Union	38,005
Ill. Surety	33,272
Aetna Indemnity	32,645

\$2,748,830

For Reinsurance:

Guarantee Co. of N. A.	\$ 50,000
-----------------------------	-----------

Total available indemnity \$2,789,830

The Vacant Chairs.

The United Surety is dropped from the approved list. Others are reduced in rank. On the whole, it appears that the combined resources available for surety bond undertakings has increased. The Boston pneumatic tube concern of many millions purported capital, first foisted upon Uncle Sam by the great Parker, the Sam Slick of Washington Federal surety business, is also missing from the revised list. And there are other, but unimportant ones. All of which tends toward a higher standard of practice by Uncle Sam and a breaking away from the Parker Bond et al. methods of recent years.

The Tiger's Claws.

The tigerish cruelty of which human nature is capable is illustrated very aptly in the present plight of the United Surety Company, of Baltimore, and it affords confirmation strong as proofs of Holy Writ that a soulless corporation can no more dally with Satanic fires and hope for immunity than can the individual. The unholy alliance entered into by the United with the dive and suicide-hall liquor dealers of New York worked its undoing just as "The Chronicle" predicted when the suicide pact was made. The utterly and hopelessly discredited management of the company was too stupid to see just a little way ahead. It seems now as if their act was deliberate.

Certainly no principle of intelligent interest obtained foothold in their councils.

Now comes the end. The tiger has

eaten its young. The "trusted" officers of the liquor league have been caught with the goods on, the goods in this instance being the sale to over 340 "innocents" in the saloon business of blocks of United Surety stock at \$150 per and the further consideration of the company making the bond for their liquor license. Now it is out that these patriotic officials obtained these shares from the promoting philanthropist Knabe, of piano fame, at \$80 per share, he having acquired them at \$60. Then comes the pitiful sequel in an offer from the new control of the company to these deluded minority stockholders of \$59 per share. This is a first and voluntary offer and evidently indicates approximately the correct value of the stock.

The Majority's Offer.

To the Minority Stockholders of the United Surety Company, Baltimore, Md.

Gentlemen,—As you are doubtless advised, the capital stock of the United Surety Company has been found to be seriously impaired, necessitating the contribution of further capital by the stockholders if the company is to continue to do business.

The company has passed resolutions looking to the cutting of its capital stock in half and issuing additional stock at a premium for the purpose of making good the surplus.

While the affairs of the company were in this condition, I have purchased the majority of the capital stock of the company from Messrs. E. J. and William Knabe at \$59 a share, and I am willing to offer the holders of the minority of the stock the same terms.

If you desire to avail yourself of this offer send your stock to the United Surety Company, endorsed in blank, together with sight draft on me drawn for such amount as will represent the value of your holdings at \$59 per share, to the National Mechanics Bank, Baltimore, Md., using the endorsed form for the purpose.

This offer will not be open unless accepted by wire or by forwarding the stock prior to Wednesday, April 20.

Very truly yours,

THOMAS H. BOWLES.

There is good reason to expect a complete change of executives and the rehabilitation of the company after its

I notice that a number of agents are making changes from the Companies they were formerly with to other Companies. Also, that none of these agents have been in correspondence with the Philadelphia Life. Perhaps it is due to the fact that they do not read our advertisements, and I think that it would pay the agents, whether they are working for this company or not, to read these advertisements, as many a time there appear in the advertisements little arguments that would help them to secure business. For instances:—How many agents to-day are using the argument that they are insuring income, which is really what you do on every policy that you have caused to be issued by a Life Insurance Company? Now why don't you get in touch with the new up-to-date income policy of the Philadelphia Life that is different in all details from that issued by any other Life Insurance Company? Write Perry to-day.

stormy period of gestation, birth and infancy.

It will also serve as a warning to other foolish youth who rush in where even the veterans are badly stung. It also revives "The Chronicle's" oft-repeated suggestion that the companies use their organization to restrain the writing of excise liquor bonds for one, or, perhaps, two years, and the situation will clear itself. Then an adequate rate may be obtained. The only logical argument against this action is advanced by an official who points out that if the rate was doubled the excise department would advance the forfeitures in the same ratio. Already the department is boasting of a surplus of \$36,000 over expenses last year and asking for the appointment of additional political heelers to "inspectorships," meaning, in reality, weekly "collectors"—they say to gather evidence, but there are several citizens who just laugh at that.

Yesterday at Albany there was reported out of the legislative committees favorably a bill to increase the number of "collectors of evidence" from 60 to 150. And so the bonding companies may be amply warned of the department's need for increased income.

And so in the evolutionary process the United Surety is simply marking the inevitable pains of growth and development and affording an example and object-lesson for the generations to follow:

The Prosecution of Violators Makes Excise Department More Than Self-Sustaining.

State Excise Commissioner Clement reports that for the six months period from October 1, 1909, to April 1, 1910, he has collected in costs and penalties in bond actions and cancellation proceedings upward of \$284,800, which is more than \$36,000 in excess of the total expenses of the department during the same period.

The effect is wholesome and encourages obedience to law. Liquor dealers who think are beginning to realize that they cannot afford to violate it. The losses are liable to be greater than the profits.

THE GLOBE SURETY COMPANY.

Kansas City, Wednesday, (special).—The new company designed to take over the surety and fidelity business of the Commerce Trust Company, of this city, will be titled Globe Surety Company.

The new company will have a capital of \$500,000 and an equal surplus and will begin business with a running and working organization. Backed by the Commercial Trust interests the new-born "Globe Surety," directed by the well seasoned experience of Man-

ger Van Buren, must get up front. There is an indication of highest enthusiasm on the part of those interested in the new movement that augurs well for the future of the company. It is recalled that the city abhorred the National Surety Company, of New York, through the reorganization of the surety department of the Missouri Kansas and Texas Trust Company on similar lines. It is also recalled that the effort to combine insurance and banking hazards has been absolutely abandoned by even the most adventurous of the "high financiers" of the trust company world.

It is probable that some other of the numerous inchoative propositions of organization throughout the Middle West may be brought into the fold and rescued from the inevitable end toward which they are rapidly drifting.

The Guarantee Surety and Casualty Company of Kansas City, Mo., has received its charter. The company has an authorized capital of \$500,000 and surplus of \$250,000. The officers are: President, Dr. J. P. Kanoky; vice-presidents, J. C. Wolcott and John H. Wiles; secretary, James A. Roberts; treasurer, F. G. Robinson.

The clause in a fire policy making its validity depend upon the sole and unconditional ownership by insured is reasonable and valid, and a breach of such stipulation, unless waived by the company, will excuse it from liability.—Bacot v. Phenix Insurance Company of Brooklyn (Miss.) 729.

The West Virginia Insurance Company of Alderson has been organized to write all kinds of insurance—capital, \$25,000. The incorporators are G. H. Gwinn and J. N. Alderson, of Alderson; W. B. Heinz, of White Sulphur Springs, and W. D. Slaven, of Lewisburg.

THE END BEGINS.

What may properly be termed a panic is agitating the serried ranks of those soldiers of fortune, yclept promoters of new insurance schemes and companies, who have, through over-industriousness, pulled their own house down over their heads.

It's a simple example in equation. In the old school copy books was an axiom that when thieves fall out honest men may get (or have a chance to get) their dues. If these gents of promoting skill had hung together, it is quite probable that they would not be hanging separately—at least yet. But, as it is, the profession seems gravitating rapidly toward the toboggan.

With the passing of "Brilliant Bob" Armstrong and his "Everyladies Corporation," and the puncturing of two or three other over-bulbed inflations, together with the deflection of the king-pin of the whole bunch, and the sudden return to grace (?) of his chief lieutenant, according to profession of faith, by way of confession and avoidance, there has come cold feet feelings to the satellites—that is, the professionals. The amateurs will no doubt stay in the game, or try. There is something peculiarly contagious in the promoting play as it has been staged. It is not likely that it will down. On the contrary, it will merely assume a different livery in which to serve as the devil's cadet. For instance, it may be apropos to quote the following from the "Underwriters' Report":

The license of the Union Guarantee Association of Portland to transact business in Oregon during the insurance year beginning April 1, 1910, has not been renewed by the State Insurance Department. The department is now notifying fire companies which had furnished statutory \$25,000 bonds of the concern that they must immediately replace such bonds with those of some other bonding company licensed in the State.

The failure on the part of the Union Guarantee Association to renew its license will not create much surprise among those familiar with the concern's operations. It attempted to obtain a monopoly of the depository bond business in Oregon last year by cutting the regular rate of one-half of one per cent., or \$125. to as low as \$35. On this basis it did succeed in writing some twenty-odd bonds, but its activities along these lines were soon restricted when the attention of fire companies was called to the class of security the company had to sell. It is understood that several of the companies which furnished Union Guarantee bonds during the last quarter of 1909 are now having a merry time attempting to collect the unearned premium for the balance of the term.

In evidence of the power of the press, already mentioned, it is only

necessary to point out that the Federal government could not accomplish by legal process what the press has done by publicity and arousing the sleepy public. The notorious Rhodus brothers, the original Belshazzars and infection spreaders in the promotion game, were dismissed in Chicago the other day on the charge of using the mails for fraudulent purposes, even after the department had issued its fraud order. This action undoubtedly influenced the department's decision in abandoning any further prosecution of a similar charge against Armstrong, inspired and vigorously pushed by his former bed-fellow, one Zimmerman, of more or less would-be promoting skill and notoriety, of Quakertown, the hamlet of the Honorable Robert's next most recent residence to his undertaking the "toning," as he termed it, of Chicago, insurancewise.

Now comes a bothersome question propounded by the "Underwriters' Report." It affords relief, however, as to the noxious presence of the ubiquitous promoter. Note these remarks:

The question, "What to do with our insurance company promoters?" bids fair to be solved by the action of a number of these gentry who lately established themselves in Cuba. Having lately exhausted the fertility of their native soil, a number of insurance promoters migrated from the Southern States to the virgin territory of the tropic isle. There, amid the luxuriant foliage of the date palm and the lordly banyan, one may witness the sight of an enthusiastic stranger expatiating to an interested native the delights of ownership of insurance company stock, the while the mountains echo: "No old-line insurance company ever failed; keep your insurance premiums at home, etc." Shades of Van Laningham, what a chance!

W. E. McLaughlin, lately of the advertising staff of the Nashville "American," has resigned to become a special agent for the Southern Insurance Company of Nashville. Mr. McLaughlin was formerly in the casualty business.

When some so-called insurance journals tackle any other than the advertising feature of the business there is laughter clear out to Kalamazoo and Kokomo. The try-monthly "Assurance" of the city has discovered Lloyds of London and London Lloyds, the real and the spurious. In the fullness of time it is barely possible that "Assurance" may justify its literal title and drift insuranceward and graduate from fulsome pulchritudinaries. Incidentally, Cousin John Bull et al. may learn that all wooden nutmegs do not come from Connecticut.

RAILROAD ACCIDENTS INCREASE.

A large increase in the number of casualties on American railroads is shown by the report for the quarter ended December 31, 1909, as compared with the corresponding quarter of the previous year. A bulletin issued by the Interstate Commerce Commission shows an increase in the number of persons killed of 301, and in the number injured of 5,645, as compared with the corresponding quarter of 1908. The total number of persons killed was 1,099, and the total number injured 22,491.

The bulletin makes a comparison of steam roads with the electric lines on which interstate traffic is carried. The total number of persons killed on the electric lines was 26, and 642 were injured. The total number of accidents on the steam roads was 3,206 (1,745 collisions and 1,461 derailments), of which 257 collisions and 155 derailments affected passenger trains. The damage to cars, roadbeds, and equipments amounted to \$2,733,830.

New York's Quota.

According to the report of the Public Service Commission just given out, there were a greater number of accidents of street car and railroad lines last month than for March, 1909. The same month in 1908 saw 4,353 accidents, while this year's figures are 4,506, with 3,925 for last year. The number of persons killed, however, is smaller, as eighteen met death last month, compared with twenty in March, 1909, and forty-four in the same month of 1908.

This increase, in view of the continued installation of improved safety devices and methods, is one of those inexplicable phenomena that puzzle the most inscrutable wisdom.

The Museum of Safety.

An exhibit of devices to prevent accidents has just been arranged for in the Engineering Societies Building, by the American Museum of Safety. This will be a permanent exhibition, free to the public, of safeguarded machines in operation, models, charts and photographs.

No exhibit will be displayed that has not been approved by the board. There will be no charge for space, but a plan of each installation must be submitted in advance. Each exhibit will be accepted as a loan for one year, then to be replaced if substantial improvements have been made. The museum assumes no responsibility for any damage by fire, or loss by theft, and exhibitors showing non-patented devices or processes do so at their

own risk. Therefore it is recommended that exhibitors arrange for fire, liability, burglary and patent infringement indemnity.

The board of approval consists of Professor F. R. Hutton, Philip T. Dodge, Charles Kirchoff, T. C. Martin, and W. H. Tolman.

All makers and inventors of safety devices, in the threefold aspect of safety for the worker, the public, and the machine, are invited to exhibit. Applications for space should be sent to the Museum, 29 West Thirty-ninth street, New York City.

Endorsed by the American Federation of Labor.

President Gompers informs the American Museum of Safety that he is directed by the executive council of the American Federation of Labor to formally endorse the American Museum of Safety in its promotion of industrial safety by means of a permanent exposition, where every safety device that human ingenuity can devise may be displayed and explained in its practical application, and commends it to the Federal, State, and Municipal governments, and particularly to the State and city government of New York, for appropriations and other support, in order that it may adequately carry on its life-saving work and its educational propaganda.

Under the direction of Dr. W. H. Tolman, this work of conservation has already accomplished results that demonstrate its utility and justifies the cordial support of casualty insurance companies.

The Maryland Casualty Company, originator of water damage insurance four years ago, shows a loss. The company believes the hazard is insurable, but it has not yet secured a sufficient average. The premiums amounted to \$18,026 and the losses to \$15,044.

ANOTHER "WHALE."

Last week "The Chronicle" referred to the movement on in Philadelphia to amalgamate some of the small struggling stragglers in the casualty procession. The movement did not at that time show the earmarks of the professional promoter, but the prospectus since received show them in box-car letters. The attempt at subterfuge is an extremely awkward one. The prospectus flaunts the title of Columbus Securities Company of New Jersey, a holding concern, to corral all vagrant and unmated elements in the casualty field. It attempts the role of innocence aforethought in its naivety and disingenuousness, but the old, old sordid story of deception runs between its lines. Just for instance, its title gives New York, Philadelphia, Chicago, Cleveland and Montreal as its habitats, and among other things contains the following misleading and deceptive language, to put it mildly:

High Average Earnings.

The sworn annual reports of corporations, accessible to all, show that in America to-day no class of stocks is producing as high an average of earnings as those of stock insurance companies. Of these by far the most conspicuous and rapidly advancing are the companies in the various casualty lines.

The percentage of profit of all casualty companies has increased 300 per cent. in the last five years. This percentage to-day is 36.7 per cent. The casualty branch of insurance is rapidly surpassing every other class in volume, demand and earnings.

No Failures.

Commercial houses fail. Banks close their doors. Railroad receiverships are common. But it is a matter of record that not a single stock casualty company has ever failed.

Protected by Law.

In no form of investment are the interests of the stockholders so rigidly and carefully safeguarded by law as in the case of stock insurance companies.

The Showing of 15 Years.

A broad, quick view of the enormous earnings of casualty insurance is given by these figures: During the past fifteen years the total received for premiums was \$525,087,304. Of this only \$208,239,306 was paid out for losses. The balance is \$316,847,998. Allowing 40 per cent. as the average cost of operating (and this is extremely high), the net earnings, or profits, have been \$190,108,798.80. All of this huge amount has been either paid to stockholders or added to surplus.

"The Fidelity and Casualty Company has paid an average dividend of 71.8 per cent. for 25 years," says the prospectus, an obvious falsehood.

This is followed by other glaring, blatant and crass evidences of the ad-

venturous promoter. Here is a mild specimen:

Thus Far.

Thus far, as must be conceded, this book has demonstrated beyond question these facts: 1. That casualty insurance is immensely profitable; 2. That this form of investment is safe; 3. That the large company has many overwhelming advantages in the securing of these great profits. These facts are matters of actual record, and they are not at all open to argument.

Thus it is clear that, so far at least, the plan of the Columbus Securities Company is based, not on theory, but upon a wise application of actual recorded results.

You will find the other features of this plan equally free from theory. In each of its details this plan is founded upon the solid rock of experience.

The peroration is a screaming bit of the ad. writing art. Even Armstrong's "Everybody's Corporation," which "guaranteed" \$220 annually for life in return for every \$10 invested "now" in casualty insurance stock may feel jealous of this rival for unsophisticated coin. And the dance goes merrily on and the end is not quite in sight, but may appear with Haley's comet next month.

THOUGHTFUL THINKS.

A few company representatives go around handing out a lot of hot air which passes current for the sole and simple reason that the controverting evidence is not at hand. Here is a handy reference table that may aid in turning on the light, as regards the liability, burglary and steam boiler business for 1909. Paste this in your hat. It may be relied upon.

Liability Figures for 1909.

	Premiums.	Per ct.	Losses Paid

Total.....\$2,359,565

It must be remembered that these figures, while approximately correct, are in each case furnished from the individual viewpoint, and the individual in each instance may represent the very best type of full seasoned skill or the fresh youngster with the whole world as his oyster.

These figures are presented as an aid in the conservation movement. It is not purposed that they shall be applied to the detriment of any experience of considerable value. On the contrary they are intended as a signal post for the un-hardy mariners on this most uncertain of all the seas of underwriting.

 Forborne Immediate Annuities.
 Curtate Summations of D Column.
 Immediate Temporary Annuities.

USES.

Computing Annual Term Insurance Premiums:
 Divide temporary insurance values by immediate temporary annuities.
 Computing Annual Endowment Insurance Premiums:
 Divide endowment insurance values by immediate temporary annuities.
 Computing Annual Pure Endowment Premiums:
 Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
 By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
 Computing Annual Semi or Double Endowment Premiums:
 Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
 Computing Limited Premiums:
 Divide the proper single premiums by immediate temporary annuity.
 Computing Surrender Values:
 Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
 Extended Insurance with Fractional Paid-up Endowment:
 Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
 Computing Terminal Reserves:
 Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
 Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
 Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
 Warranted Commissions for New Business.
 Surrender Values.
 Dividends.
 For these purposes the "select and ultimate" will be most useful.

Amendment Offered To Section 96.

On the 4th inst. Hon. William H. Hotchkiss, Superintendent of Insurance, handed to the chairman of the insurance committees of the Senate and the House, with his recommendation that the same be introduced and passed, amendments to section 96, limiting new business, to take the place of the amendments previously recommended by the department. The previous recommendation was that the bill, substantially without change, be made to apply to companies doing an industrial business, the limitations to be based upon the ordinary business in force and the special exception relating to industrial companies now in the law to be removed, and also recommending that the bill apply to all companies doing business in the State of New York, as well as to New York companies.

In the amended bill, which is now handed in by the superintendent, he continues his recommendation in these two regards, viz:

That the limitations applying to all companies doing business in New York and that as regards industrial companies, the limitation be based upon their ordinary business. The basis of limitation, however, is considerably changed as follows: First—Any company with more than \$600,000 of insurance in force is permitted to write up to full \$150,000,000. Second—Any such company may in the alternative increase its new business over the largest amount issued in any one of the three years immediately preceding by the percentage which the difference between 25 per cent. of its net renewal premiums computed according to the basis of mortality and interest assumed in cal-

culating its liabilities, and its total expenses for such preceding year, after deducting from said total expenses (1) the items of first year expenditure specified in the first sentence of section 97 of this chapter; (2) its actual investment expenses (not exceeding one-fourth of 1 per cent. of the mean invested assets), and (3) taxes on real estate and other outlays exclusively in connection with real estate, bears to said net renewal premiums.

Significance of Amendments.

The meaning of this is that, by economy in the general conduct of its business, the company may earn the privilege of doing a steadily and moderately increasing new business. If it could conduct its business without expense, this increase would be limited to 25 per cent., and in no case in point of fact would it be anything like so much as that.

The following, based upon the reports of four companies for the year 1909, gives an idea of the amount of increase which the saving in renewal expense will permit the company to make:

	Net Premiums.	Renewal Expenses.	25 per cent. of Renewals.	Saving.	Per Cent.
N. W. Mut. Life....	\$27,644,756	\$3,658,432	\$6,911,189	\$3,252,757	11.8
Equitable	38,126,938	7,359,806	9,531,734	2,171,928	5.8
New York Life.....	57,544,409	6,499,632	14,386,102	7,886,470	13.7
Mutual Life	39,378,444	5,758,548	9,844,611	4,086,063	10.3

Proposal First Suggested by Mr. Rhodes.

As this suggestion first came to the attention of the department, it was in the form that the amount of increase of new business written in any one of the three years preceding should

be based upon the percentage of saving in the cost of new business, as compared with the limitation of section 97. This suggestion was brought forward, it is understood, by Vice-President E. E. Rhodes, of the Mutual Benefit Life Insurance Company of Newark, and was doubtless based upon the experience of that company, which is that a large saving on the cost of new business as limited by section 97, is possible. It was not generally acceptable, however; and the insurance department did not approve it, for the reason that it was felt that the pressure upon the limitation of the cost of new business under section 97 was already sufficiently great without having an additional limitation based upon it. In consequence, the suggestion that the latitude be based upon the saving in renewal expense was brought forward by Chief Examiner Hadley and Auditor Woodward and was accepted by the superintendent, and, it is understood, also approved in principle by the governor.

Superintendent Hotchkiss, in commenting upon the measure at Albany

on the 4th inst., gave the press the following statement:

Under this bill any company which desires to take advantage of its provisions must necessarily conduct its business in a very economical manner, and it was to effect economy chiefly that the restriction was incorporated in the Armstrong laws.

THE EQUITABLE'S SPLENDID SETTLEMENT.

An announcement made by the Superintendent of Insurance and the Attorney General at Albany on Monday of this week makes public for the first time the fact that a committee of the directors of the company, being Thomas Spratt, of Ogdensburg; J. Edward Swanstrom, of Brooklyn; Charles H. Zehnder, of New York, and General Counsel W. A. Day, has succeeded in making a settlement of various actions by and on behalf of the company and its policyholders on the one side, and against the company, on the other, by means of which, among other benefits, the Mercantile Safe Deposit Company's lease of the basement of the Equitable building at 120 Broadway is to be released and the lease of the Securities Safe Deposit Company of Boston is also to be released, the Equitable paying \$1,050,000 for the first and \$225,000 for the second. It is estimated that thereby at least \$2,000,000 is added to the value of the Equitable's property at 120 Broadway, and at least \$420,000 to the value of its Boston property.

James Hazen Hyde's Large Contribution.

These leases were made by the Equitable under the Henry B. Hyde management, but never came to light until the troubles with the Equitable in 1905. It was understood before James Hazen Hyde left the United States that he had arranged to sell a majority of the stock in the two safety deposit companies to interests friendly to the Equitable, so that the leases could be released; and that for the purpose of enabling this to be done he agreed to turn over out of the appraised value of the stock which he sold, about \$1,000,000 to be used in this way; and in the sale of his interest in the Boston company it is understood that he was to pay over half of the appraised value of the stock for the same purpose. A similar settlement was made with him at the time, likewise, as to the Missouri Safe Deposit Company; but this is not included in the present matter, as a complete settlement was then arrived at.

The Turner Loans Also Settled.

In addition to these transactions, the Equitable has also made a compromise settlement in relation to the

so-called "Turner loans." The Equitable which was in control of the Western National Bank in 1904, caused the bank to lend money to John W. Young and others, who were engaged in various flotations. These loans impaired the bank's capital and the Equitable took them up and caused the Mercantile Trust Company, which it also controlled, to lend money to one Turner, a clerk of the Equitable. This note was guaranteed by Henry B. Hyde, Marcellus Hartley, Louis Fitzgerald, John E. Searles, W. N. Coler, Jr., and others, of whom Mr. Coler is the only survivor. Justice Bischoff held in an action brought by the Mercantile Trust Company that the company, and not these directors, was primarily liable. The Equitable now pays \$2,750,000 to obtain a release from this liability, and thereby secures a transfer to it of bonds and securities, including certificates which represent Colorado and Kentucky lands. It is believed that these are fully equal in value to the amount paid by the company.

Joint Approval of Two Departments.

These settlements did not take effect until the same had been approved by the Attorney General and the Superintendent of Insurance. They were submitted by those officers to Deputy Attorney General Edward H. Letchworth and to Alfred Hurrell, counsel to the Insurance Department, and Nelson B. Hadley, chief examiner of life companies, who joined in a memorandum to the Attorney General and the Superintendent of Insurance, which says:

When one considers that this settlement will end costly and troublesome litigation, much of which would result unfavorably to the society; allows the society to improve its buildings in New York and Boston and thus take advantage of the steadily increasing values of this real estate, all without cost to the society, and at the same time puts it in position to probably gain millions by reason of the readjustment—there can be but one conclusion, and that is that official approval should be given to the settlement and the same consummated at once.

When the question of injunction in the case of Hyde vs. the Equitable was decided by Judge Bischoff the law governing the case was set forth, which practically charged the defendant with the Turner loan liability of over \$3,000,000. The statute of limitations had already run against the directors who had collusively fastened on the society the burdensome losses when the action was commenced by the State.

There is no escape from them, and at the same time no affirmative relief against those who caused them can now be obtained. This being so, the sane course to pursue is to permit the society to effect this settlement,

whereby those liabilities can be avoided, and practically accomplish all that could be gained in the suit by the State if it were maintainable.

Under all of the facts and circumstances we therefore recommend to the Attorney General the discontinuance of the suit of the People of the State of New York against the Equitable et al. and to the Superintendent of Insurance that his approval be given to the proposed settlement as outlined.

A Congratulation and a Query.

The Equitable Life Assurance Society and its policyholders are certainly very particularly to be congratulated upon this outcome; and not the least element of the congratulation is that presumably there can be no offset to their present satisfaction in the form of a criticism by the Insurance Department hereafter. It was doubtless wisdom to obtain the approval in advance, thereby rendering it certain that the company and its management will not be subjected to criticism; but this also gives rise to the following question: Is such always to be deemed the part of wisdom? And, if so, will not the Insurance Department, even under its present exceedingly energetic, industrious and efficient management, be likely to find that it is carrying a very serious burden, if every important movement of the insurance companies doing business in the State of New York is to be referred to it for consideration before action is taken.

OLDEST LIFE INSURANCE POLICIES.

"Mutual Interests," a company paper of the Mutual Life Insurance Company, of New York, says that Policy No. 458 of that company, issued on January 24, 1844, on the life of George L. Newman, of Charlottesville, Va., is the oldest policy of life insurance in force in the United States. It was issued before the company was twelve months old. The next oldest is Policy No. 5 of the New England Mutual Life Insurance Company, issued on February 1, 1844, upon the life of Mrs. Emma S. Rogers of Massachusetts. Mr. Newman is now 94 years old and Mrs. Rogers 87 years old. Neither of them is of the age that other policyholders in various companies have attained to.

Mr. Newman's policy was issued on the ordinary life plan for \$1,500, but all dividends have been applied to purchase additional insurance and the amount of the policy is now \$5,179. Mrs. Rogers discontinued premium payments on her policy many years ago, and it was endorsed paid up for \$294.

ROBERT LYNN COX COMES BEFORE SENATE COMMISSION.

Among the others who appeared before the health committee of the United States Senate at Washington, D. C., on April 29, in advocacy of the bill to establish a Federal department of health, Hon. Robert Lynn Cox, chairman and general counsel of the Association of Life Insurance Presidents, appeared on behalf of that association and delivered an address in part as follows:

If the sentimental side is permitted to dominate in the consideration of this question as it has heretofore, tears will again constitute our main contribution to the financial problems presented by untimely and unnecessary deaths. I would not be understood as intimating that Congress fails to respond to sentiment for evidence to the contrary measured by millions of dollars may be found in every annual appropriation bill. But rather would I be understood as recognizing the duty resting upon you to see that there is reasonable certainty of adequate return in some form or other for every dollar of the people's money you expend. If it can be shown that money spent to prolong human life means large economic gain to the nation as a whole, there would seem to be but one answer to the question of whether you should spend it. To the consideration of this question life insurance companies ought to be able to contribute some valuable information since their business is founded on the principle that human lives have a money value.

The Federal Government can be stirred to great activity to stamp out hog cholera but it sits supinely by if the scourge be typhoid fever among men. It is in the front ranks when it comes to dealing with the foot and mouth disease of cattle, but hesitates about acting when shown that human beings are dying in this country at the rate of one every three minutes from tuberculosis.

And why is this so? Simply because we are not accustomed to view human life from an economic standpoint. We want better water and more sanitary habitations—and sometimes we vote to tax ourselves to get them, but we do it in order that we may escape death ourselves rather than because we regard ourselves as having a money value, worth saving to the world at large. Life insurance companies began telling men years ago that untimely death meant a financial loss to their dependents, which could in a measure be provided against. They did not suggest that men might learn how to live longer, but did say that the money loss incidental to death might be distributed among the living on a scientific basis.

One of the first steps to be taken in preventing untimely deaths is to acquire accurate information in regard to the causes of such deaths. This involves not alone inquiry as to the ultimate and direct cause, but concerning the indirect and contributing causes. Such information is not to be had in quantity sufficient to be of real value, except in the archives

of life insurance companies. They have collected it in the prosecution of their business over a period of many years. Even there it has never been collated and thus made of the greatest practical value. Within the past year the leading life insurance companies, acting through their medical directors and actuaries, have determined to make a scientific and exhaustive examination of their records of some fifteen million individual policyholders whose policies have matured as death claims. This information will be given to life insurance companies in order that they may the better know how to select and reject risks, and to the world in order that people may escape death by avoiding as far as possible the causes which experience has shown lead to death.

It is believed that the product of this investigation when added to the knowledge already acquired in regard to the causes of disease and death will mark a new era in matter of prolonging human life.

Nothing I have said must be construed as minimizing the value and importance of that service, nor as a failure to appreciate the wonderful results achieved by Dr. Wyman and his able assistants. My argument is not directed against that bureau or the men in it, but on the contrary, is meant to be a plea for giving them larger fields and greater opportunity. They have not only demonstrated their personal fitness for such service, but the fitness of the Federal Government to carry on the work of preventing disease and thereby prolonging the average human life.

Gentlemen, the conservation of material resources is of great importance, but the conservation of human life is of greater importance. It will save as many dollars and by saving also sorrow and suffering will contribute more to the happiness and contentment of the American people, than water powers and coal fields. To conserve the health of America is to conserve its greatest and most important natural resource.

Among the others who appeared were Professor Irving Fisher, of Yale, president of the Committee of One Hundred, which is responsible for the movement in favor of establishing a department of health in connection with the National Government.

ORGANIZATION OF INSURANCE DEPARTMENTS.

The Metropolitan Life Insurance Company sends out, with its compliments an interesting compilation, entitled "Organization of Insurance Departments in the United States," which gives the date of the organization of each of the insurance departments, the titles of the supervising officers and the names of all who have held office, with their terms of office.

It would be extremely difficult to obtain this information at first hand, and no other publication has ever purported to give it in compact form.

"The Leading Fire Insurance Company of America."

WM. B. CLARK, President.
W. H. KING, Vice-President.
HENRY E. REES, Secretary.
Assistant Secretaries,
A. N. WILLIAMS, E. S. ALLEN,
E. J. SLOAN, GUY E. BEARDSLEY.

1860 50th YEAR 1910

HOME LIFE

Insurance Company of New York.

GEORGE E. IDE, President.

Assets	\$23,626,018.63
Liabilities	21,858,691.52
(Including Deferred Dividend Fund)	
Dividend Endowment Fund	
(Deferred Dividends)	2,119,044.00
Net Surplus	1,767,327.00
Insurance in Force.....	92,532,583.00

The record for 1909 shows the following GAINS:

Insurance in Force	\$4,164,239.00
Assets	1,917,117.00
Deferred Dividend Reserve...	148,581.00
Contingency Reserve (Surplus)	655,149.17

COME AND PROSPER

Among the 15 largest American companies (excluding industrials) this is our 1909 ranking:

First place in percentage of gain in insurance in force; *third place* in gain over 1908 in amount of paid-for new business.

New business first quarter of 1910 far in excess of first quarter of 1909. Our agents are busy and prosperous—and are not driven by the Home Office.

MASSACHUSETTS MUTUAL LIFE INSURANCE COMPANY,

Springfield, Mass.

Incorporated 1851

"COMMISSION RATES AND COST OF LIVING."

"The American Underwriter," of New York, presents, in its issue of March, 1910, "A Study of Agents' Commission Rates in All Branches of Insurance in the Light of the Increased Cost of Living," from the pen of Edward Bunnell Phelps, editor of that journal. Mr. Phelps thinks that in these days, when there is great public interest in the matter of the enhanced cost of living and in the necessity of the increase of wages of workingmen to meet the same, it is remarkable that "there would seem to be absolutely no interest in the conformity or non-conformity of his (the insurance agent's) scale of commission in the change in cost of living," and that on the contrary "at present the sole interest in that subject, if any at all, apparently is in the direction of trying to restrict by statute the commissions of both life and fire agents." The following still further represents the view of the editor of the "American Underwriter":

That weird statutory product of high-browed life insurance thinking, the new Armstrong code of New York State, set a most extraordinary economic precedent by providing specific limitations for the renewal commissions which ordinary domestic life insurance companies might pay their agents, and indirectly ordering a pronounced reduction of their commissions on first-year premiums. Several States have discussed the advisability of similar interference with the fixing of fire agents' commissions, and, in short, as already stated, the sole inquiry and action in the matter of readjusting insurance agents' commissions in these twentieth century days have been with a view to readjusting down, instead of up. Apparently the public attitude toward insurance agents' compensation, in so far as now ascertainable, is in entire harmony with its attitude toward the tariff. It wants to see both materially scaled down.

One Matter Not Mentioned.

There is an unfortunate neglect to mention that the president of the National Association of Life Underwriters, at its session in Louisville last year, said that life insurance agents were making more money than ever before, that is, a larger average income per agent. Certainly nobody will accuse him of having been prejudiced in favor of the Armstrong laws, and, in view of the fact, which Mr. Phelps proceeds to show very clearly, that the average rate of commission has been materially reduced, it must follow that in many, if not all, of the companies doing business in New York, thereby subjecting themselves to the restrictions of the Armstrong

laws, the same thing has been taking place, as in the Fidelity Mutual Life Insurance Company, the president of which said in his report of a year ago that the agents were doing on an average 50 per cent. more business per man than in the good old days of high commissions.

That conditions are so nearly the same in fire and other branches of insurance that it is likely that if commissions were reduced there, it would result in increased earnings for the agents who give their time to the business, is by no means certain; but there are some reasons for believing that moderate commission rates would drive out of all of these businesses ne'er-do-wells and hangers-on, and yield better aggregate incomes to those who are really competent agents.

Decline in Commissions in Certain Life Companies.

For purposes of comparison Mr. Phelps makes use of the commission payments of six companies, reporting to the New York Department as follows: The Equitable, Mutual Benefit, Mutual, New York, Northwestern Mutual and Penn Mutual.

He finds that the average rates of first year's premiums have been as follows:

Year.	Per Cent.
1899.....	55.34
1900.....	55.63
1901.....	53.96
1902.....	51.69
1903.....	51.79
1904.....	52.52
1905.....	56.49
1906.....	53.68
1907.....	45.33
1908.....	43.49

Even this presumably by no means tells the full story, because in this compilation nothing but commissions has been dealt with; whereas, prior to the going into effect of the Armstrong laws on January 1, 1907, "bonuses, prizes and rewards" were, in some of these companies, usual and almost constant companions of commissions, and, in addition, there were very large disbursements for so-called advances and salaries for obtaining new business. All of these are presumably entirely done away with by the prohibitions of the Armstrong laws.

Notwithstanding which the average volume of business written by agents employed by the companies doing business in New York is increased so much that they are making more money than ever before.

The Figures in Other Branches.

The comparison as to the commissions and brokerage paid by casualty

and surety companies is also interesting:

Year.	Per Cent.
1899.....	27.78
1900.....	27.52
1901.....	27.33
1902.....	27.32
1903.....	27.15
1904.....	27.22
1905.....	26.85
1906.....	26.33
1907.....	26.24
1908.....	27.17

The percentage of commissions paid in fire insurance, however, does not show this slight increase or even a slight decrease, but a more or less steady increase.

The percentage runs as follows:

Year.	Per Cent.
1899.....	19.75
1900.....	20.31
1901.....	20.76
1902.....	20.28
1903.....	21.31
1904.....	21.22
1905.....	21.45
1906.....	21.45
1907.....	21.22
1908.....	21.88

General Decline Measured in Purchasing Power.

As compared with all these Mr. Phelps, by reference to the United States Bureau of Labor's investigation of the cost of living, finds that during the same period there have been increases in the wholesale prices of all commodities, as compared with 100 per cent., in 1898, as follows:

Year.	Per Cent.
1899.....	101.7
1900.....	110.5
1901.....	108.5
1902.....	112.7
1903.....	113.6
1904.....	113.0
1905.....	115.9
1906.....	112.5
1907.....	129.5
1908.....	122.8

In purchasing power, therefore, he concludes that the net decrease in agents' commissions has been as follows:

20.90 per cent. for life agents.

Germania Fire

INSURANCE CO.,

NEW YORK.

ORGANIZED 1859.

Cash Capital.....\$1,000,000.00
Assets.....\$6,562,329.14
Net Surplus.....\$2,008,419.02
Surplus for Policyholders,\$3,008,419.02

HEAD OFFICE:

Cor. William and Cedar Streets.

14.55 per cent for casualty insurance agents and

8.27 per cent. for fire agents.

The Results of Investigation and Laws, Together.

Of course, in case of life agents he is intending to take into account only those who represent companies doing business in New York and his selection of companies was intended to be typical for them. The following is an interesting statement, mingling the results of the Armstrong investigation and of the Armstrong laws:
